Joe,

Thanks for spending sometime earlier in the week on the D&C critical wells list. I am sure you will hear more on this from Halliburton on this list as well as the year progresses.

I have attached an excel sheet with a list of wells in GoM that will fall under Halliburton cementing services, most of these are yours.

Would like to use this excel sheet as a form of weekly communication (once per you pick the day) on; 1) Current status of cementing in the well; 2) Plan forward for the next 7 days; 3) Any significant challenges you see from the cementing side short term (7 day window); 4) Any significant challenges you see from the cementing side long-term that we need to address in planning; 5) Any remedial cementing requirement

I do not want you to spend a lot of time on this but I would like it to serve to keep me informed as to where we are at with respect to cementing these wells, what is coming up short term, and what challenges you see that could impact your performance on the well. For instance it is obvious that all wells have centralization challenges so no need to list the obvious, but if the well configuration does not allow you to achieve centralization this is a challenge. Or for example, long term isolation is always a challenge but if you think we need to look at special systems due to some event in the well that you are aware will happen then this is a challenge worth listing.

You may also want to include any potential HAL technology applications that you feel we need to look at or discuss.

Hope you can support this effort.

I sent a mail to Seth today; I believe we will look at reviewing the plan for the 9 7/8 liner together sometime next week.

Regards,
Erick

Worldwide Court Reporters, Inc.

Erick,
Did you want to meet before or after the DC 133 9 7/8" Liner Peer Review on Tuesday?

Looks like I may have a few meetings this week with the DD III team as they try and plan a way forward due to the HP Piping issues on board.

FYI. The DC 102F and DC 131V are completed with good zonal isolation across the production intervals as per CBL. We are currently on DC 314 and DC 133 now.

Thank you,

Joe Edwards

Subject: BP Critical Wells List

Joe,

Please have a look at the list of wells below. These are the wells on the BP Global Critical Wells list that will fall under your direct influence this year I believe.

Our performance on these wells is going to get a very high level of visibility in 2010.

I want to set up a meeting with you next week (when it will not distract from the preparation for upcoming operations) to review where you are at with respect to planning for these wells, see how they line up with respect to the Atlantis cementing BoD, and determine how we can potentially better define the way we work together and to ensure we leave no gaps in design and execution for each of these wells.

Should not take any longer than 1 hour.

Regards,
Erick
