Subject: RE: Mud Program
Importance: Normal

As Mark mentioned yesterday we are particularly concerned about mud losses in the next interval. Have robust background LCM and lost circulation event recommendations such as Form-a-set or Form-a-squeeze recommendations included. Also as usual plan on running the stacked sieve and PPT daily. As I recall I don't think there is a potential for H2S, so there is no need to plan for running the GGT but we should have everything needed to run it on the rig.

Thanks,

John

Doyle,

Can you take the bariod mud program, and convert it to MiSwaco for the Horizon please. As I know some recommendations will differ, please add any touches you may see fit and let myself or John know about questions you may have regarding our plans. You only need to do the work from the 18" to TD, the previous sections have already been completed. See the attached spreadsheet for the current well layout.

Thanks
Brian
