Document.pdf

By the below email note, BP is deeming the MC 252 # 1 Well (Macondo) as having reached Objective Depth at its current TD of 18,360 MD for the reasons stated in the email. Let me know whether or not this is acceptable to us so that I can formally advise BP of either our concurrence or objection as the case may be.

Also included for our review and approval is BP's proposed AFE to set the 9 7/8" production casing.

**Subject:** Macondo TD & Draft Sub. Op. AFE

Gentlemen:

Due to safety concerns and wellbore integrity issues, BP, as operator, has deemed the Macondo exploratory well as achieving Objective Depth at 18,360' MD. Having both loss zones, and comparatively over-pressured sands in the open hole provided for little to no margin to continue drilling. Currently, we are in the process of evaluating the well in accordance with the approved well plan and AFE.

It is anticipated that we will conclude the evaluation program as early as tomorrow evening at such time we will issue a subsequent operation AFE to set 9 7/8" production casing. To avoid unnecessary rig standby time awaiting an election, we are attaching a copy of the subsequent operation AFE for your review and would appreciate your feedback ASAP. Please note there may be some slight changes to the official AFE once it is issued (e.g., start date, end date, proposed TD); but the cost estimate will be the same.

Please let me know if you have any questions or concerns.
