Allen,

Just to update you on Macondo, we are drilling below 15100' MD this morning. My correlation puts us just below the top of the MM9 and we appear to be running near prediction at this point. The next original casing point was at 17000' MD but I do not know for sure if BP plans to try to take the well all the way to this depth since we set the previous string so much higher than planned (13100' MD). However, things so far look good so if we continue at this pace we would be to that casing point by this time tomorrow.

Paul
