Tim,

[REDACTED] on't know yet whether the
The geological reports, that are current thru April 15th, show a running tally of what has been accomplished on the scheduled wireline program. In summary, a triple combo, a CMR, OBMI, MDTs, rotary SWC (26 recovered out of 42), Dipole Sonic, and a VSP have all been completed and we have all this data. This was done as of Friday last week. The only thing I'm not sure of is the current casing situation. I'll update you as I find out more information.

Paul

Cores and MDT's for sure.....I will need to check on what other wirelines.....they also had a VSP planned?.....

Paul, Could you update us on the actual formation evaluation program that was completed on Macondo....

Thanks, Tim

Again, no well reports but from the AM mud log report this is the activity...

ACTIVITY, PREVIOUS 12 HOURS

Finish running 7" casing. Cross over and run 9-7/8" casing. Continue running casing on No losses observed.

PLANNED ACTIVITY

Continue running 9-7/8" casing. Start running casing on 6-5/8" landing string.

Current depth: 12141'
