I'm fine with washing it on the way out with the 3-1/2" stinger.

John,

As we spoke in the morning meeting, the BP Subsea Team has requested that we wash the Wellhead while POOH with the cement stinger assy. Don mentioned this morning that if we tried to wash using the 3 1/2" stringer, we could damage the lock down area if the 3 1/2" stinger rattled in the wellhead area. Don mentioned that he would use a wash sub. Of course that requires a trip.

Any comment?
