	DEEPWATER HORIZON EMERGENCY RESPONSE MANUAL DWH-HSE-PR-001	SECTION:	1
		SUBSECTION:	N/A
INTRODUCTION			

## 1 INTRODUCTION

This Offshore Emergency Response Manual describes the duties and responsibilities for specific emergency situations. The manual does not give detailed instructions for each crewmember and is intended to provide a guide as to the actions to be taken. The Onshore Emergency Response Manual gives details of the support organization provided by the Division office in the event of an emergency situation arising offshore.

## 2 CHAIN OF COMMAND

The DEEPWATER HORIZON is classified by American Bureau of Shipping (ABS) \*A1, Column Stabilized Drilling Unit, \*AMS, \*ACCU, \*DPS-3. The function of the vessel and performance of all personnel are the responsibility of the Offshore Installation Manager (OIM).

For obvious reasons, only one person can be in charge at any one time. This Person-In-Charge (PIC) is the individual who is fully responsible for onboard activities or directly related to the vessel. United States Coast Guard regulations, 46 CFR 109.107, require the PIC to be designated in writing when operating on the US Outer Continental Shelf (OCS). This designation is posted onboard the Mobile Offshore Drilling Unit.

The organization chart found on the following page will be used to define each of the specific emergencies found in subsequent sections.

The change of command will be noted in the ship's logbook, showing reason and time of change.

*Hard copies are printed from an electronic system and are not controlled*
