13-May-2010

Gregory Luke Meche

MI SWACO - Compliance Specialist

Responsibilities: Monitor retention of base fluid and cutting discharged into the gulf.

4Yrs. Offshore experience; 3yrs Compliance Spec on the Horizon.

Arrived on Horizon April 20th at about 10:00 to 10:30.

Unpacked, had lunch, hooked up his computer.

Talked with Leo, was told that his job was to collect the sample of the spacer when displacing the riser. Linder said go to the gumbo box at 13,000 strokes.

He had his monitor screen on where he could see MD & TVD (This screen monitors the same activity as the rig screen)

Watched the screen and played video games to pass the time.

At about 13,000 to 14,000 strokes went to the gumbo box. Had about 10 min. to wait.

Garden Jones, Blair Manual and Carl Kleppinger (Shaker Hand) was there

There was a talk-back system to the rig floor.

When the shutdown for the sheen test the shaker hand opened the overboard line.

The spacer came back on strokes and on time. Had a bucket, caught a sample. Handed the bucket to Gorden for his test. Took a sample in a cup to conduct a static sheen test. Blair accompanied him. Verified the test was good.

He caught the interface between the 14 and the 16; he agreed the pump shut down for the sheen test.

The company man was not there.

He injected to run the static sheen test for 60 minutes. After 5 minutes he observed it and it was good.

Blair went o the shaker house; Gorden went to his lab.

Took the remainder of the mud to the shaker house and waited.

Talked to Gorden and told him that it was 15-4 and told him that it was what we needed.

Went back to the third party office for 20 minutes to do paperwork on static sheen test and displacement.

Heard 1st explosion between 9:45 and 10:00. It sounded like something dropped.

30 seconds later heard a second blast.

Cannot recall if the lights went out before or after the 2nd blast.

He later recanted that the lights went out after the first bump.

Went out into the hallway; there was smoke and insulation everywhere,

The galley walls had collapsed. He panicked.

Ran back into his room to retrieve his life vest. The alarm was sounding to muster at the secondary location.

Everyone was outside.

The general alarm was stating "this is not a drill, muster at the secondary locations".

Once outside saw flames coming from the rig floor as high as the derrick or higher.

Did not smell anything different.
