Page 6:08 to 7:21

8 Q. Okay. Would you state your name for the  
9 record, please.  
10 A. Brian Morel.  
11 Q. Okay. Mr. Morel, my name is Scott  
12 Bickford. I rep -- I'm an attorney. I represent  
13 the plaintiffs' steering committee in the -- this  
14 DEEPWATER HORIZON matter.  
15 The -- I'm going to ask you a series  
16 of questions today. If you don't understand the  
17 question I ask you, please stop me and I'll try to  
18 rephrase it so that you do. I'm not a petroleum  
19 engineer, so some of the questions I may ask may  
20 be ill formed, but hopefully not.  
21 This is your deposition. If you need  
22 to take a break, please tell me. I'll -- we'll be  
23 happy to go that -- the way the deposition works  
24 is that we have to break every hour due to the  
25 tape that we're running. They get changed once an  
1 hour, so we have that break coming up each hour.  
2 Have you ever been deposed before?  
3 A. No.  
4 Q. No.  
5 And again, if you need to talk to  
6 your counsel or anything, please let me know, and  
7 we'll stop and let you do that.  
8 Can you give me your address, please.  
9 A. It's [REDACTED]  
10 [REDACTED]  
11 Q. And how old are you, sir?  
12 A. 31.  
13 Q. And are you married?  
14 A. Yes.  
15 Q. To whom?  
16 A. Jade Morel.  
17 Q. Okay. And what is your educational  
18 background, sir?  
19 A. On advice of my counsel, I invoke my  
20 constitutional right not to be a witness against  
21 myself and decline to answer.

Page 8:09 to 8:20

9 Q. (BY MR. BICKFORD) Sir, can you tell me  
10 what your first job was?

11 A. Same answer.  
12 MR. MEHTA: Put on the record and get  
13 agreement from counsel that when Mr. Morel says  
14 "same answer," he's incorporating or referring to  
15 the same answer he just previously -- that he gave  
16 to the previous question.  
17 MR. BICKFORD: I understand that.  
18 MR. MEHTA: All right.  
19 MR. BICKFORD: And that's in --  
20 that's in the Court's order.

Page 8:24 to 9:10

24 Q. (BY MR. BICKFORD) Have you ever been  
25 convicted of a crime, sir?  
1 A. Same answer.  
2 Q. By whom are you presently employed?  
3 A. Same answer.  
4 Q. What is your present position, sir?  
5 A. Same answer.  
6 Q. What is your present posting, sir?  
7 A. Same answer.  
8 Q. What are your present responsibilities,  
9 sir?  
10 A. Same answer.

Page 9:13 to 10:17

13 Sir, do you know whether or not you  
14 are the subject of a grand jury investigation?  
15 A. Same answer.  
16 Q. Are you?  
17 A. Same answer.  
18 Q. Do you know whether or not you are a  
19 target of a grand jury investigation?  
20 A. Same answer.  
21 Q. Are you?  
22 A. Same answer.  
23 Q. Okay. Mr. Morel, did you ever provide any  
24 testimony to the joint investigative committee of  
25 the U.S. Coast Guard and the Bureau of Oceans  
1 Management -- sorry, Ocean Energy Management?  
2 A. Same answer.  
3 Q. Okay. Were you ever interviewed by that  
4 joint investigative body?  
5 A. Same answer.

6 Q. Were you ever interviewed by the  
7 Presidential Commission investigating the  
8 DEEPWATER HORIZON incident?  
9 A. Same answer.  
10 Q. Were you ever interviewed by individuals  
11 that made up what is known as the Bly Commission  
12 at BP?  
13 A. Same answer.  
14 Q. Were you independently interviewed by  
15 anyone at BP for the -- in connection with this  
16 incident?  
17 A. Same answer.

Page 11:06 to 11:21

6 (Marked Exhibit No. 4500.)  
7 Q. (BY MR. BICKFORD) Sir, is this your  
8 personal data page from BP?  
9 A. Same answer.  
10 Q. Okay. I'd like to turn to Exhibit No. --  
11 Tab No. 24. I'm sorry. Go back. Turn to Tab  
12 No. 25.  
13 (Marked Exhibit No. 4501.)  
14 Q. (BY MR. BICKFORD) Sir, have you ever seen  
15 this document before?  
16 A. Same answer.  
17 Q. Sir, does this document represent an  
18 interview that you gave post April 20th, 2010,  
19 regarding the casing and cement job performed on  
20 the DEEPWATER HORIZON?  
21 A. Same answer.

Page 11:25 to 14:08

25 Q. Are the facts set forth in Exhibit  
1 No. 4501 true?  
2 A. Same answer.  
3 Q. Do you disagree with any of them?  
4 A. Same answer.  
5 Q. I ask you to turn to Tab No. 26.  
6 MR. BICKFORD: We'll mark that as  
7 Exhibit No. 4502.  
8 (Marked Exhibit No. 4502.)  
9 Q. (BY MR. BICKFORD) Sir, this document  
10 purports to be a transcription of Brian Morel  
11 interview notes from an interview that was

12 commenced at 10:40, April 27, 2010, before a panel  
13 of Rex Anderson, Pat Lucas, Jim Wetherbee and  
14 Warren Winters.

15 First of all, have you seen this  
16 document before, sir?

17 A. Same answer.

18 Q. Sir, are the facts set forth in this  
19 document facts that you gave to Messrs. Anderson,  
20 Lucas, Wetherbee and Winters?

21 A. Same answer.

22 Q. Do you disagree with any of the facts that  
23 are set forth in this document, sir?

24 A. Same answer.

25 Q. Sir, did you -- was there anyone else in  
1 this interview?

2 A. Same answer.

3 Q. How long did the interview last, sir?

4 A. Same answer.

5 Q. Who are Mr. Anderson, Lucas, Wetherbee and  
6 Winters?

7 A. Same answer.

8 Q. I'd ask you to turn to Tab No. 27.

9 MR. BICKFORD: I'll go ahead and mark  
10 that as Exhibit No. 4503.

11 (Marked Exhibit No. 4503.)

12 Q. (BY MR. BICKFORD) Sir, this document  
13 purports to be notes by Jim Wetherbee of an  
14 interview taking place on April 27th, 2010. Have  
15 you seen this document before?

16 A. Same answer.

17 Q. Who is Mr. Wetherbee?

18 A. Same answer.

19 Q. Are the -- are the facts that  
20 Mr. Wetherbee has set forth from the interview  
21 information that you provided him?

22 A. Same answer.

23 Q. Is it accurate, sir?

24 A. Same answer.

25 Q. Turn to Tab No. 28, sir.

1 MR. BICKFORD: I'm going to go ahead  
2 and mark this as Exhibit No. 4504.

3 (Marked Exhibit No. 4504.)

4 Q. (BY MR. BICKFORD) Sir, do you recognize  
5 this document?

6 A. Same answer.

7 Q. Have you ever seen this document?

8 A. Same answer.

Page 14:12 to 17:13

12 The document purports to be notes  
13 from an interview of you on April 27th, 2010. Do  
14 you believe that to be true?  
15 A. Same answer.  
16 Q. Is this information that you gave in an  
17 interview on April 27th, 2010?  
18 A. Same answer.  
19 Q. Is the information you gave true and  
20 correct, sir?  
21 A. Same answer.  
22 Q. Turn to Tab No. 30, sir.  
23 MR. BICKFORD: I'm going to go ahead  
24 and mark that as Exhibit 4505.  
25 (Marked Exhibit No. 4505.)  
1 Q. (BY MR. BICKFORD) Sir, have you seen this  
2 document before?  
3 A. Same answer.  
4 Q. Sir, this document purports to be notes  
5 from Jim McKay taken of a -- of you during an  
6 interview on May 10th, 2010. Have you ever seen  
7 this before?  
8 A. Same answer.  
9 Q. Did you meet with Mr. McKay?  
10 A. Same answer.  
11 Q. Who is Mr. McKay?  
12 A. Same answer.  
13 Q. Did the information that you provided  
14 Mr. McKay -- is the information that you provided  
15 Mr. McKay accurately set forth in his notes?  
16 A. Same answer.  
17 Q. Do you disagree with any of his notes?  
18 A. Same answer.  
19 Q. Turn to Tab 31, sir.  
20 (Marked Exhibit No. 4506.)  
21 Q. (BY MR. BICKFORD) Marked as Exhibit 4506.  
22 Mr. Morel, this document purports to  
23 be notes of a May 10th, 2010, interview. Do you  
24 recognize the handwriting?  
25 A. Same answer.  
1 Q. Is the information that is set forth in  
2 this document accurate?  
3 A. Same answer.

4 Q. Do you know who you met with on May 10th,  
5 2010, besides Mr. McKay?  
6 A. Same answer.  
7 Q. Other than those interviews, sir, have you  
8 given an interview to anyone else after the  
9 incident of April 20th, 2010, regarding the  
10 Macondo Well? Excluding your attorneys, of  
11 course.  
12 A. Same answer.  
13 Q. Who were present during those interviews,  
14 sir?  
15 A. Same answer.  
16 Q. Were the statements you gave in those  
17 interviews true and correct, sir?  
18 A. Same answer.  
19 Q. Okay. Have you been interviewed by any  
20 state or federal prosecutor -- prosecutorial  
21 agencies?  
22 A. Same answer.  
23 Q. The U.S. Attorney's office?  
24 A. Same answer.  
25 Q. Any state's attorney's office?  
1 A. Same answer.  
2 Q. Have you been interviewed by any federal  
3 or state agencies?  
4 A. Same answer.  
5 Q. Such as the FBI?  
6 A. Same answer.  
7 Q. Okay. EPA?  
8 A. Same answer.  
9 Q. Okay. Sir, have you been subpoenaed to  
10 testify before a grand jury?  
11 A. Same answer.  
12 Q. Have you testified before a grand jury?  
13 A. Same answer.

Page 17:19 to 18:24

19 Have you been offered immunity  
20 against prosecution for testimony that you've  
21 given in connection with the DEEPWATER HORIZON  
22 Macondo Well?  
23 A. Same answer.  
24 Q. Okay. Do you have -- have you been given  
25 and -- and accepted immunity for any testimony  
1 that you have given or may give as a result of the

2 DEEPWATER HORIZON Macondo Well incident?  
3 A. Same answer.  
4 Q. Sir, as a result of the Macondo Well  
5 incident, have you been reprimanded by BP?  
6 A. Same answer.  
7 Q. Okay. Sir, did you receive a bonus  
8 payment for the year 2010 from BP?  
9 A. Same answer.  
10 Q. What was that bonus payment --  
11 A. Same answer.  
12 Q. -- predicated on?  
13 You have to let me finish, then  
14 answer.  
15 Sir, your position during the years  
16 2009-2010 at BP had been on a well design team; is  
17 that correct, sir?  
18 A. Same answer.  
19 Q. And you and your team were responsible for  
20 designing the Macondo Well, were you not?  
21 A. Same answer.  
22 Q. Okay. And, sir, you, in fact, were the  
23 principal person in designing the casing of that  
24 well, were you not?

Page 19:01 to 19:07

1 A. Same answer.  
2 Q. (BY MR. BICKFORD) And you and your team  
3 approved of the design of the cementing of that  
4 well, did you not?  
5 A. Same answer.  
6 Q. And you and your team monitored the well  
7 as it was being drilled, did you not?

Page 19:14 to 19:19

14 Q. (BY MR. BICKFORD) Do you know what the  
15 term "monitor data from a well" means?  
16 A. Same answer.  
17 Q. Okay. Sir, you and your well team  
18 monitored the well as it was being drilled, did  
19 you not?

Page 19:21 to 19:25

21 A. Same answer.

22 Q. (BY MR. BICKFORD) Sir, you and your team  
23 oversaw and approved procedures such as cement  
24 bond logs, negative tests, positive tests and  
25 other well integrity tests, did you not?

Page 20:02 to 20:06

2 A. Same answer.  
3 Q. (BY MR. BICKFORD) Sir, it was part of  
4 your responsibility to make sure that in designing  
5 this well, that the rig itself was kept safe; is  
6 that correct?

Page 20:08 to 20:11

8 A. Same answer.  
9 Q. (BY MR. BICKFORD) It was part of your  
10 responsibility in designing this well that its  
11 personnel was kept safe; is that true?

Page 20:13 to 20:17

13 A. Same answer.  
14 Q. (BY MR. BICKFORD) And, sir, it was part  
15 of your responsibility to make sure in designing  
16 this well that the environment was kept safe; is  
17 that correct?

Page 20:19 to 20:24

19 A. Same answer.  
20 Q. (BY MR. BICKFORD) And, sir, it was part  
21 of you and your team's responsibility to prepare  
22 reports and permits to the MMS, both for approval  
23 and to keep the MMS apprised -- apprised of the  
24 well operations; is that correct?

Page 21:01 to 21:04

1 A. Same answer.  
2 Q. (BY MR. BICKFORD) Sir, you knew for some  
3 time that this well was very problematic, didn't  
4 you, sir?

Page 21:06 to 21:06

6 A. Same answer.

Page 21:10 to 21:11

10 Q. (BY MR. BICKFORD) Sir, this well was  
11 problematic, wasn't it?

Page 21:13 to 21:15

13 A. Same answer.  
14 Q. (BY MR. BICKFORD) You had a lot of  
15 problems with it, didn't you?

Page 21:17 to 22:18

17 A. Same answer.  
18 Q. (BY MR. BICKFORD) Sir -- in fact, sir,  
19 you referred to this well as a nightmare well, did  
20 you not?  
21 A. Same answer.  
22 Q. Okay. Sir, I'd ask you to turn to Tab  
23 No. 19 in the white book. And, sir, this  
24 document, Bates -- with an ending Bates No. 7582  
25 is, in fact, an E-mail chain between you and your  
1 wife, is it not?  
2 (Marked Exhibit No. 4507.)  
3 A. Same answer.  
4 Q. (BY MR. BICKFORD) And in this E-mail  
5 chain, you tell your wife that -- "Sorry you-all  
6 have" -- "having" -- "Sorry, you-all are  
7 having" -- I'm sorry.  
8 Your wife tells you, "Sorry you-all  
9 are having well issues again. This has been a  
10 nightmare well. You are smart to," quote, "'let  
11 it go,'" close quote, "since you won't be involved  
12 in all the conversation over the weekend. They  
13 can live with the consequences if they are poor."  
14 Is that a discussion between you and  
15 your wife, sir?  
16 A. Same answer.  
17 Q. In fact, you did believe this was a  
18 nightmare well, didn't you, sir?

Page 22:20 to 23:12

20 A. Same answer.

21 Q. (BY MR. BICKFORD) And, in fact, you also  
22 referred to this well as a "well from hell," did  
23 you not, sir?

24 A. Same answer.

25 Q. And in E-mails to and from your wife, you  
1 referred to this privately with her as a "well  
2 from hell," did you not?

3 A. Same answer.

4 Q. Did other people at -- on the drill team  
5 at BP refer to this as a "well from hell," too?

6 A. Same answer.

7 Q. Did people on the rig, to your knowledge,  
8 refer to this as a "well from hell"?

9 A. Same answer.

10 Q. And, in fact, this history -- this -- the  
11 Macondo Well had a history of well control  
12 problems, did it not?

Page 23:14 to 23:17

14 A. Same answer.

15 Q. (BY MR. BICKFORD) And, in fact, in March  
16 of 2010, the well experienced a very bad kick, did  
17 it not?

Page 23:19 to 24:07

19 A. Same answer.

20 Q. (BY MR. BICKFORD) I direct your attention  
21 to the Bates stamp which ends in 504. It is an  
22 E-mail purportedly dated March 9th from you to  
23 Jade Morel; and it states: "We took a bad kick  
24 last night. Been in the ops room all day trying  
25 to figure out what to do."

1 Did I read that correctly, sir?

2 A. Same answer.

3 Q. And that's what you informed your wife on  
4 that day; isn't that correct, sir?

5 A. Same answer.

6 Q. So, you did take a very bad kick, didn't  
7 you?

Page 24:09 to 24:14

9 A. Same answer.

10 Q. (BY MR. BICKFORD) Sir, in fact, the --

11 this was a situation where the kick actually  
12 caused the drill pipe to become stuck, and you  
13 couldn't circulate because the formation had  
14 collapsed around it; is that correct?

Page 24:16 to 24:19

16 A. Same answer.  
17 Q. (BY MR. BICKFORD) And, in fact, sir, your  
18 team was having a number of organizational  
19 problems at the time, was it not?

Page 24:21 to 25:12

21 A. Same answer.  
22 Q. (BY MR. BICKFORD) Sir, I direct your  
23 attention to the Bates stamp number ending in 541,  
24 which is Page 4 of this exhibit. This is a --  
25 purports to be another E-mail from you, sir, to  
1 your wife dated Thursday March 11, 2010, quote:  
2 "Our team is out of control. Management is being  
3 superconservative beyond belief. Now, the lounge  
4 lizard is going to help us out. I can't take it;  
5 so, I am staying away from the issues today."  
6 Did I read that correctly, sir?  
7 A. Same answer.  
8 Q. Is that what you wrote your wife on  
9 March 11th, 2010?  
10 A. Same answer.  
11 Q. In fact, the -- the lounge lizard, sir,  
12 was Mr. Guide?

Page 25:14 to 25:25

14 A. Same answer.  
15 Q. (BY MR. BICKFORD) And did you get along  
16 with Mr. Guide, sir?  
17 A. Same answer.  
18 Q. And you were not -- you were not  
19 personally pleased that Mr. Guide was not  
20 participating in the well design team, were you,  
21 sir?  
22 A. Same answer.  
23 Q. And the damages from this kick in March of  
24 2010 cost millions of dollars in equipment and  
25 delay, did it not?

Page 26:02 to 26:02

2 A. Same answer.

Page 26:11 to 29:09

11 Q. (BY MR. BICKFORD) Have you kept -- you  
12 kept having problems with the ECD on this well,  
13 didn't you?

14 A. Same answer.

15 Q. I direct your attention to what is Bates  
16 stamped 5 -- 7547, which is Page 9. This is an  
17 E-mail purportedly dated March 22, 2010, from you  
18 to your wife, Jade Morel, and you state, quote:  
19 We got another curve ball today. 14.71 ECD  
20 supposed to be 13.8 max (overburden is a 14.5).  
21 The Tiger team is scratching their heads. Just  
22 keeps throwing us curve balls."

23 Is that what -- did I read that  
24 correctly, sir?

25 A. Same answer.

1 Q. And is this what you wrote to your wife on  
2 March 22, 2010, sir?

3 A. Same answer.

4 Q. And the Tiger team, sir, is an elite team  
5 of well control experts at BP; is that correct?

6 A. Same answer.

7 Q. And, in fact, the well continued to keep  
8 giving you problems after this date, did it not?

9 A. Same answer.

10 Q. I direct your attention to an E-mail which  
11 is 7424.

12 MR. MEHTA: Do you have a page number  
13 for that, Brian?

14 MR. BICKFORD: I'll get it to you in  
15 just a second. Here it is. Page 10.

16 MR. MEHTA: 7524?

17 MR. BICKFORD: Yes, 7524, Page 10.

18 Q. (BY MR. BICKFORD) Sir, this is an E-mail  
19 chain dated one day later on March 23rd, 2010; and  
20 you, in writing to your wife, Jade Morel, state:  
21 "Never stops with this well. Just keeps throwing  
22 us curve balls and making me work. When I haven't  
23 been in meetings, I've been struggling to get  
24 everything done we need to get done."

25                   Is that what you wrote your wife on  
1   March 23rd, 2010?  
2           A.   Same answer.  
3           Q.   And the well was continuing to give you  
4   problems, was it not, sir?  
5           A.   Same answer.  
6           Q.   And, sir, the demands on your time of this  
7   well kept growing and growing, didn't it?  
8           A.   Same answer.  
9           Q.   Sir, I direct your attention to Bates  
10   7467, Page 11.  
11                  Sir, this is -- purports to be an  
12   E-mail chain dated March 30th, 2010, some six days  
13   after -- seven days after the E-mail that we just  
14   looked at.   Quote:  "My day is already busy.  
15   People wanting to know more and more as we get  
16   close to the target."  
17                  Is that what you wrote your wife,  
18   sir?  
19           A.   Same answer.  
20           Q.   Sir, going to Page 12, on April 5th, you  
21   had yet another well control problem, did you not?  
22           A.   Same answer.  
23           Q.   And, in fact, you wrote your wife on that  
24   day that, quote:  "In another well control  
25   situation with total loss returns.  So, today  
1   should be a busy one."  
2                  Is that what you wrote your wife,  
3   sir?  
4           A.   Same answer.  
5           Q.   "Total loss returns" is not a good thing  
6   to happen when drilling a well, is it, sir?  
7           A.   Same answer.  
8           Q.   It meant more costs to this well, sir, did  
9   it not?

Page 29:11 to 29:14

11           A.   Same answer.  
12           Q.   (BY MR. BICKFORD)  But this well was  
13   supposed to be a big payday for you and BP, wasn't  
14   it?

Page 29:16 to 30:04

16           A.   Same answer.

17 Q. (BY MR. BICKFORD) But isn't that what you  
18 meant, sir, when you E-mailed your wife? And I  
19 direct your attention to the April 5th, Page 13,  
20 quote: "Not too bad. Just spend the morning  
21 trying to figure out what to do. I think we have  
22 a good plan. Didn't take much of convincing --  
23 didn't take much convincing of anyone, and I just  
24 sent out the procedure to the rig. So, hopefully  
25 we can start working on getting it done and  
1 getting this well over with. People are happy  
2 about the sand we've seen so far, but that's on  
3 the down low -- down low."  
4 Did I read that correctly, sir?

Page 30:06 to 30:09

6 A. Same answer.  
7 Q. (BY MR. BICKFORD) And, sir, people were  
8 happy about the sand they had seen so far because  
9 BP thought this was a big well, didn't they?

Page 30:11 to 30:14

11 A. Same answer.  
12 Q. (BY MR. BICKFORD) And, sir, because it  
13 was a big well with a high payout, you-all were  
14 willing to take some risks, weren't you?

Page 30:16 to 30:18

16 A. Same answer.  
17 Q. (BY MR. BICKFORD) But, sir, you were  
18 still worried about well integrity, weren't you?

Page 30:20 to 32:02

20 A. Same answer.  
21 Q. (BY MR. BICKFORD) On May -- on  
22 April 13th, you considered not running casing or  
23 running -- or running a liner because of the well  
24 integrity, did you not?  
25 A. Same answer.  
1 Q. Let me direct your attention to 7550 at  
2 the bottom of Page 16, E-mail purported to be  
3 between you and your wife dated April 13th of  
4 2010: "We are considering not running casing or

5 running a liner because of integrity issues. So,  
6 I have a 4:00 p.m. meeting which might" -- it  
7 looks like -- "got until 5:00 p.m. Hopefully, we  
8 can knock it out quicker."

9 Did I read that correctly?

10 A. Same answer.

11 Q. Why, sir, were you considering not running  
12 a case -- running casing or running a liner  
13 because of integrity issues?

14 A. Same answer.

15 Q. What were the integrity issues that you  
16 were concerned about in April 13th, 2010, some  
17 seven days before this well blew up?

18 A. Same answer.

19 Q. Sir, then, right as this well was supposed  
20 to be finished, there was a change-out of  
21 personnel of BP on the rig, was there not?

22 A. Same answer.

23 Q. And Mr. Koluza was sent to the rig, was he  
24 not?

25 A. Same answer.

1 Q. And Mr. Koluza wasn't really trusted by  
2 the people in your section, was he?

Page 32:04 to 32:07

4 A. Same answer.

5 Q. (BY MR. BICKFORD) You knew that  
6 Mr. Koluza was a subpar well site leader, didn't  
7 you?

Page 32:09 to 32:12

9 A. Same answer.

10 Q. (BY MR. BICKFORD) Did your drilling team  
11 know that he was one of the least rated well site  
12 leaders by BP in the Gulf of Mexico?

Page 32:14 to 32:16

14 A. Same answer.

15 Q. (BY MR. BICKFORD) Mr. Koluza didn't know  
16 anything about this well, did he?

Page 32:18 to 32:22

18 A. Same answer.

19 Q. (BY MR. BICKFORD) And you were so  
20 concerned about that that you went out to the rig  
21 to oversee operations yourself, personally, did  
22 you not?

Page 32:24 to 33:22

24 A. Same answer.

25 Q. (BY MR. BICKFORD) Okay. I direct your  
1 attention to Page 17 of the exhibit, sir. Another  
2 E-mail purportedly from you to your wife Jade; is  
3 that correct, sir?

4 A. Same answer.

5 Q. And, sir, in writing this E-mail, you  
6 wrote: "Yah, really busy, got the long-string" --  
7 looks like -- "to design. So, we will be running  
8 that but will have to work the liner for a  
9 contingency. I have to go offshore. Our normal  
10 WSL" -- that's well site leader, correct, sir?

11 A. Same answer.

12 Q. -- "is heading in, and the new guy is good  
13 but not in tune with the well. So, I need to go  
14 out there and make sure they follow every step as  
15 any deviations could lead to us not getting a good  
16 cement job and having to do a lot of remedial  
17 operations. Am all right going. Don't plan to  
18 stay long. Running casing, then heading home."

19 Did I read that correctly, sir?

20 A. Same answer.

21 Q. Sir, you-all knew that Mr. Koluza didn't  
22 have any experience with this well, correct?

Page 33:24 to 34:03

24 A. Same answer.

25 Q. (BY MR. BICKFORD) And you knew, sir,  
1 that -- did you know, sir, that he also didn't  
2 have any long-term experience in deepwater  
3 operations?

Page 34:05 to 34:11

5 A. Same answer.

6 Q. (BY MR. BICKFORD) And isn't it true, sir,  
7 that nobody on the -- your drill team prepared a

8 packet of information to give Mr. Koluza to orient  
9 him as to the issues on this particular well prior  
10 to him going to the DEEPWATER HORIZON; is that  
11 correct, sir?

Page 34:13 to 34:16

13 A. Same answer.  
14 Q. (BY MR. BICKFORD) And that's something  
15 that probably should have been done, in hindsight,  
16 wasn't it, sir?

Page 34:18 to 35:22

18 A. Same answer.  
19 Q. (BY MR. BICKFORD) Excuse me just a  
20 second, Mr. Morel.  
21 Sir, turn to Tab 24, please, in the  
22 white book. Sir, this purports to be a nomination  
23 for promotion. Have you seen this document  
24 before?  
25 A. Same answer.  
1 Q. And, sir, one of the reasons that you had  
2 been nominated for promotion within BP --  
3 MR. BICKFORD: And I'm going to mark  
4 this as Exhibit No. 4508.  
5 (Marked Exhibit No. 4508.)  
6 Q. (BY MR. BICKFORD) One of the reasons that  
7 you had been nominated for promotion with BP was  
8 for saving BP money, was it not?  
9 A. Same answer.  
10 Q. In fact, it was listed as the "wise  
11 decisions" on your nomination for promotion, sir;  
12 isn't that correct?  
13 A. Same answer.  
14 Q. And if I -- in fact, they cite you as  
15 saving \$500,000 in one instance; is that correct?  
16 A. Same answer.  
17 Q. And, in fact, they cite you as saving  
18 \$2 million in another instance; is that correct?  
19 A. Same answer.  
20 Q. Okay. So, when it got to the Macondo  
21 Well, you were eager to save money on that well,  
22 too, weren't you, sir?

Page 35:24 to 36:03

24 A. Same answer.

25 Q. (BY MR. BICKFORD) In fact, in all of your  
1 employment evaluations at BP, the fact that you  
2 had been saving the company money were prominently  
3 mentioned, weren't they?

Page 36:05 to 36:07

5 A. Same answer.

6 Q. (BY MR. BICKFORD) And you've been praised  
7 for that; isn't that correct, sir?

Page 36:09 to 36:18

9 A. Same answer.

10 Q. (BY MR. BICKFORD) Did you get this  
11 promotion, sir?

12 A. Same answer.

13 Q. Sir, wasn't it a fact that, as of the  
14 spring of 2010, the Macondo Well was far behind  
15 schedule?

16 A. Same answer.

17 Q. Wasn't it a fact, sir, it was far for  
18 cost?

Page 36:20 to 36:24

20 A. Same answer.

21 Q. (BY MR. BICKFORD) And you knew your drill  
22 team, sir, was anxious to plug and abandon this  
23 well and move to the next project; is that  
24 correct, sir?

Page 37:01 to 37:08

1 A. Same answer.

2 Q. (BY MR. BICKFORD) And that was the Nile  
3 project; is that correct, sir?

4 A. Same answer.

5 Q. And so, sir, when it came to April of  
6 2010, your team was concerned about saving as much  
7 time and money as possible on this well; is that  
8 correct?

Page 37:10 to 37:14

10 A. Same answer.

11 Q. (BY MR. BICKFORD) And, sir, by not  
12 placing 21 centralizers in the well, despite the  
13 strong recommendations of Halliburton, time and  
14 money were saved, were they not?

Page 37:16 to 37:21

16 A. Same answer.

17 Q. (BY MR. BICKFORD) And by not waiting for  
18 the results of the foam stability test on the  
19 cement slurry that was actually used on the well  
20 on or about April 19th, 2010, time and money was  
21 saved, were they not?

Page 37:23 to 38:01

23 A. Same answer.

24 Q. (BY MR. BICKFORD) And by not running a  
25 cement bond log, time and money were saved on the  
1 well; is that correct?

Page 38:03 to 38:08

3 A. Same answer.

4 Q. (BY MR. BICKFORD) And by using a spacer  
5 made of a combination of loss circulation  
6 materials to avoid transporting that material off  
7 the rig and disposing it as hazardous waste,  
8 you-all saved BP time and money, did you not?

Page 38:10 to 38:13

10 A. Same answer.

11 Q. (BY MR. BICKFORD) By displacing the mud  
12 in the riser before setting the surface cement,  
13 you saved time and money, didn't you?

Page 38:15 to 38:19

15 A. Same answer.

16 Q. (BY MR. BICKFORD) By setting the cement  
17 plug at 3,000 feet below the mud line and  
18 seawater, you saved time and money, didn't you,  
19 sir?

Page 38:21 to 38:25

21 A. Same answer.  
22 Q. (BY MR. BICKFORD) By not performing well  
23 integrity diagnostic in light of troubling and  
24 unexplained negative pressure tests, you saved  
25 time and money, didn't you?

Page 39:02 to 39:14

2 A. Same answer.  
3 Q. (BY MR. BICKFORD) And you would agree  
4 with me, sir, that the negative pressure test  
5 results that were made on the DEEPWATER HORIZON on  
6 April 20th, 2010, were, in fact, anomalous?  
7 A. Same answer.  
8 Q. And you'd agree with me, sir, that those  
9 anomalous results should have been fully reported  
10 to the shore; is that correct?  
11 A. Same answer.  
12 Q. And you would agree with me, sir, that  
13 those anomalous results were completely  
14 misinterpreted, were they not?

Page 39:16 to 39:20

16 A. Same answer.  
17 Q. (BY MR. BICKFORD) And by bypassing the  
18 pits and pumping mud directly to the DAMON  
19 BANKSTON on April 20, 2010, BP saved time and  
20 money, did it not?

Page 39:23 to 40:01

23 A. Same answer.  
24 Q. (BY MR. BICKFORD) By not running a  
25 top-to-bottom circulation, BP saved time and  
1 money, did it not?

Page 40:03 to 40:06

3 A. Same answer.  
4 Q. (BY MR. BICKFORD) By using a long-string  
5 versus a liner and tie-back, BP saved time and  
6 money on the Macondo Well, did it not?

Page 40:08 to 40:10

8 A. Same answer.  
9 Q. (BY MR. BICKFORD) In fact, some \$7- to  
10 \$10 million were saved, is that correct?

Page 40:12 to 40:15

12 A. Same answer.  
13 Q. (BY MR. BICKFORD) Sir -- if a liner and  
14 tie-back were used, sir, there would have been a  
15 lower ECD, correct?

Page 40:17 to 40:20

17 A. Same answer.  
18 Q. (BY MR. BICKFORD) And, sir, having a  
19 lower ECD would have likely provided you with a  
20 better cement job; isn't that correct, sir?

Page 40:22 to 41:01

22 A. Same answer.  
23 Q. (BY MR. BICKFORD) And, sir, in addition,  
24 had you used a liner and tie-back, that would have  
25 acted as an additional annular -- annular barrier,  
1 sir, once the tie-back had been run?

Page 41:03 to 41:09

3 A. Same answer.  
4 Q. (BY MR. BICKFORD) And, sir, what was the  
5 total savings of time and money that you and your  
6 team accomplished by using a long-string, not  
7 using 21 centralizers, not doing a bond log, using  
8 up the LCM spacer on the rig, and not running a  
9 top-to-bottom circulation?

Page 41:11 to 43:01

11 A. Same answer.  
12 Q. (BY MR. BICKFORD) Sir -- isn't it a fact,  
13 Mr. Morel, that you stated in the E-mail on  
14 March 12th that they were trying to push casing  
15 points -- that "trying to push casing points has  
16 been getting us into trouble"?

17 A. Same answer.

18 Q. I direct your attention to Tab No. 9 in  
19 the black book.

20 MR. BICKFORD: I'm going to go ahead  
21 and mark that as Exhibit No. 4509.

22 (Marked Exhibit No. 4509.)

23 Q. (BY MR. BICKFORD) Sir, this is an E-mail  
24 chain with an attachment. And the E-mail chain  
25 purports to be from you to Mark Hafle, Brett  
1 Coteles, David Sims, and Gregory Walzs, CC'ing  
2 Rodolfo Rivera and John Guide.

3 First of all, who are each of those  
4 people?

5 A. Same answer.

6 Q. And, sir, did you state in your initial  
7 E-mail on March 12th, 2010, at 4:52 p.m.: "We do  
8 not feel following the MMS design in reality is a  
9 good option unless something changes in this well  
10 to indicate the margins have opened more and we  
11 are back on track with the initial pore pressure  
12 estimates, as trying to push casing points has  
13 been getting us into trouble."

14 Did you write that, sir?

15 A. Same answer.

16 Q. Is that what you believe, sir?

17 A. Same answer.

18 Q. Did BP modify trying to push casing points  
19 after that period of time?

20 A. Same answer.

21 Q. And, sir, did the BP side track options in  
22 your primary design differ from the MMS filings  
23 that you were making?

24 A. Same answer.

25 Q. If so, the MMS filings would have been  
1 false; is that correct?

Page 43:03 to 43:09

3 A. Same answer.

4 Q. (BY MR. BICKFORD) Now, sir, isn't it true  
5 that there were no clear instructions for negative  
6 testing of well displacement?

7 A. Same answer.

8 Q. And isn't having clear instructions for  
9 such tests considered a process safety issue?

Page 43:11 to 43:11

11 A. Same answer.

Page 43:16 to 43:18

16 Sir, is it true that on several  
17 occasions fast drilling resulted in ECD's  
18 exceeding leak-off pressures in this well?

Page 43:20 to 43:23

20 A. Same answer.  
21 Q. (BY MR. BICKFORD) And isn't it true that  
22 those incidents were not reported to the MMS as  
23 required?

Page 43:25 to 44:04

25 A. Same answer.  
1 Q. (BY MR. BICKFORD) And isn't it true, sir,  
2 the ECD versus leak-offs often violated BP's  
3 written plans and procedures in drilling -- in the  
4 drilling program?

Page 44:06 to 44:07

6 A. Same answer.  
7 Q. (BY MR. BICKFORD) Sir, isn't it true that

Page 44:10 to 44:12

10 Sir, isn't it true that the top  
11 hydrocarbon zone was actually sand at 17,476 feet  
12 containing free gas and not at 18,260 feet?

Page 44:14 to 44:17

14 A. Same answer.  
15 Q. (BY MR. BICKFORD) Sir, isn't it true that  
16 there were fluid losses of 3 to 9 barrels during  
17 the primary cementing operation?

Page 44:19 to 44:22

19 A. Same answer.

20 Q. (BY MR. BICKFORD) And isn't it true, sir,  
21 that these losses were -- would have been  
22 indicators of a compromised cement job?

Page 44:24 to 45:07

24 A. Same answer.  
25 Q. (BY MR. BICKFORD) Sir, isn't it true that  
1 the Tiger team warned your drill design team  
2 against fast drilling and overrunning your ability  
3 to interpret realtime data on this well?  
4 A. Same answer.  
5 Q. Sir, in -- at BP in your drilling  
6 programs, isn't it true that all MOCs, management  
7 changes, require risk assessments?

Page 45:09 to 45:14

9 A. Same answer.  
10 Q. (BY MR. BICKFORD) Was there a Management  
11 of Change for the failure to achieve planned  
12 depths on casing seats at 36 inches, 28 inches,  
13 22 inches, 18 inches, 16 inches, and 13 and  
14 five-eighths inches?

Page 45:16 to 45:23

16 A. Same answer.  
17 Q. (BY MR. BICKFORD) Were manage- --  
18 Management of Changes were not filed for the scope  
19 of those changes, were they?  
20 A. Same answer.  
21 Q. Were Management of Change orders filed for  
22 failure to achieve margins exceeding leak-off  
23 requirements while drilling?

Page 45:25 to 46:10

25 A. Same answer.  
1 Q. (BY MR. BICKFORD) Sir, is it true that  
2 your BP drill team identified an uncontrolled  
3 blowout as a moderate risk -- moderate risk?  
4 A. Same answer.  
5 Q. Sir, is it true that your BP drill team  
6 identified the cost impact as only the impact of  
7 an uncontrolled blowout and chose to eliminate the

8 13 and five-eighths inch intermediate protective  
9 string on cost alone, ignoring process safety in  
10 HSSE?

Page 46:12 to 46:23

12 A. Same answer.  
13 Q. (BY MR. BICKFORD) Sir, the Macondo Well  
14 employed a long-string design, did it not?  
15 A. Same answer.  
16 Q. And the well design had been changed  
17 several times prior to the final design, had it  
18 not?  
19 A. Same answer.  
20 Q. And the fact that your team eventually  
21 decided to employ a long-string well design should  
22 have put the well site leaders on added vigilance  
23 for cement failures; is that correct?

Page 46:25 to 47:04

25 A. Same answer.  
1 Q. (BY MR. BICKFORD) And you should have  
2 briefed the people on -- the drillers on the  
3 TransOcean rig as to that concern, shouldn't you  
4 have?

Page 47:06 to 47:09

6 A. Same answer.  
7 Q. (BY MR. BICKFORD) And the drillers on  
8 the -- the TransOcean drillers were not briefed on  
9 that concern, were -- were they?

Page 47:11 to 47:15

11 A. Same answer.  
12 Q. (BY MR. BICKFORD) It should have been  
13 your concern that the cement job was not properly  
14 performed, given the well design that you chose,  
15 isn't that correct?

Page 47:17 to 48:21

17 A. Same answer.  
18 Q. (BY MR. BICKFORD) Sir, I ask you to look

19 at Exhibit No. -- Tab No. 47, which is a previous  
20 exhibit, which I'm going to re-mark today and  
21 I'll -- as Exhibit 4510.

22 (Marked Exhibit No. 4510.)

23 Q. (BY MR. BICKFORD) Sir, do you recognize  
24 this document?

25 A. Same answer.

1 Q. Sir, this is a -- purports to be a  
2 production casing report prepared for you on  
3 April 15th, 2010, by Halliburton?

4 A. Same answer.

5 Q. And, sir, you reviewed this document,  
6 didn't you?

7 A. Same answer.

8 Q. And sir, you knew that as of -- for the  
9 well design -- for the casing design that your  
10 team had intended to use on the DEEPWATER HORIZON,  
11 that Halliburton had made -- was asked to make  
12 specific cement recommendations; is that correct?

13 A. Same answer.

14 Q. And, in fact, these are the cement --  
15 cementing recommendations or cementing program  
16 that was submitted by Jesse Gagliano to you on  
17 behalf of Halliburton, correct?

18 A. Same answer.

19 Q. And, sir, this particular program made the  
20 assumption that there would be a number of  
21 centralizers used in the well space, did it not?

Page 48:23 to 49:01

23 A. Same answer.

24 Q. (BY MR. BICKFORD) And, in fact, Jesse  
25 Gagliano proposed that 21 centralizers be used; is  
1 that correct?

Page 49:03 to 49:08

3 A. Same answer.

4 Q. (BY MR. BICKFORD) And, in fact, in  
5 response to that particular recommendation, your  
6 well team went out and found the added  
7 centralizers that it needed to meet the  
8 Halliburton recommendations, did it not?

Page 49:10 to 49:17

10 A. Same answer.

11 Q. (BY MR. BICKFORD) And, sir, those  
12 centralizers were actually delivered to the rig,  
13 were they not?

14 A. Same answer.

15 Q. (BY MR. BICKFORD) And the purpose of  
16 having the centralizers in the well was to ensure  
17 a good cement job; is that correct?

Page 49:19 to 49:25

19 A. Same answer.

20 Q. (BY MR. BICKFORD) And the purpose of  
21 having those centralizers in the well, sir, was to  
22 prevent channeling; isn't that correct, sir?

23 A. Same answer.

24 Q. And had channeling occurred, it would have  
25 compromised the cement job; is that correct, sir?

Page 50:02 to 50:07

2 A. Same answer.

3 Q. (BY MR. BICKFORD) And, sir, isn't it true  
4 that had 21 centralizers been utilized, that it  
5 was Halliburton's opinion that there would have  
6 been minor gas flow problems on this particular  
7 well, sir?

Page 50:09 to 51:09

9 A. Same answer.

10 Q. (BY MR. BICKFORD) And, sir, you actually  
11 viewed the centralizers on the rig, did you not?

12 A. Same answer.

13 Q. Okay. And, sir, it was you that reported  
14 back to shore, sir, that the centralizers that had  
15 been sent out to the rig were, in fact, different  
16 than the centralizers that shore thought was on  
17 the rig; is that correct?

18 A. Same answer.

19 Q. And, in fact, sir, they weren't, were  
20 they?

21 A. Same answer.

22 Q. You made a mistake, didn't you, sir?

23 MR. MORRISS: Form.

24 A. Same answer.

25 Q. (BY MR. BICKFORD) As a result of that  
1 mistake, sir, isn't it a fact that Mr. Guide  
2 directed that that centralizer -- that 21  
3 centralizers not be used on the well; is that  
4 correct?

5 MR. MORRISS: Form.

6 A. Same answer.

7 Q. (BY MR. BICKFORD) Okay. And, sir,  
8 eventually, only seven centralizers were used; is  
9 that correct?

Page 51:11 to 52:21

11 A. Same answer.

12 Q. (BY MR. BICKFORD) And, sir, you agreed  
13 with that decision, did you not?

14 A. Same answer.

15 Q. And, sir, can you tell me what type of  
16 centralizers were actually shipped to the  
17 DEEPWATER HORIZON?

18 A. Same answer.

19 Q. Sir, you were aware, on April 18th -- and  
20 turn to Tab 57 -- excuse me. I'm sorry. It's 58.  
21 This has been previously marked as an exhibit.

22 MR. BICKFORD: For today, I'm going  
23 to mark this as 4511.

24 (Marked Exhibit No. 4511.)

25 Q. (BY MR. BICKFORD) Sir, have you seen this  
1 document before?

2 A. Same answer.

3 Q. It purports to be a casing production  
4 report prepared for you, submitted by Jesse  
5 Gagliano of Halliburton --

6 A. Same --

7 Q. -- dated April 17th, 2010. Have you seen  
8 this document before?

9 A. Same answer.

10 Q. Did you-all ask Mr. Gagliano to run an --  
11 alternate reports on the cement job with only six  
12 or seven centralizers being used?

13 A. Same answer.

14 Q. Who asked him to do that?

15 A. Same answer.

16 Q. Okay. Did you also receive, on the 18th  
17 of April, a casing design report stating that if

18       only seven centralizers were used, that there  
19       would be a severe gas flow problem?  
20           A.   Same answer.  
21           Q.   Okay.  But you knew that, didn't you, sir?

Page 52:23 to 53:14

23           A.   Same answer.  
24           Q.   (BY MR. BICKFORD)  Did you make any  
25       attempts to stop the job on the rig because of the  
1       lack of centralizers, sir?  
2           A.   Same answer.  
3           Q.   In fact, you agreed that the centralizers  
4       weren't necessary, didn't you, sir?  
5           A.   Same answer.  
6           Q.   Okay.  In fact, you thought gravity would  
7       keep the pipe straight in the hole, didn't you,  
8       sir?  
9           A.   Same answer.  
10          Q.   Isn't that what you wrote Mr. Hafle?  
11          A.   Same answer.  
12          Q.   Sir, you realized that this well, under  
13       your plan, was going to be severely underbalanced,  
14       didn't you?

Page 53:16 to 53:21

16           A.   Same answer.  
17           Q.   (BY MR. BICKFORD)  And the fact that this  
18       well was going to be underbalanced, the well at  
19       one point was going to be relying on the cement  
20       job as the only barrier to the influx of  
21       hydrocarbons into the well; is that correct?

Page 53:23 to 53:23

23           A.   Same answer.

Page 54:10 to 56:04

10           Q.   (BY MR. BICKFORD)  Okay.  Mr. Morel, your  
11       counsel indicated to me at the break that I --  
12       that you perhaps might want to answer some  
13       questions regarding your background.  And I'm  
14       going to go back and ask you -- re-ask a question  
15       concerning your educational background.

16 Can you tell me what your educational  
17 background is, sir?

18 A. I have a BS in mechanical engineering from  
19 Rice University.

20 Q. And when did you obtain that degree, sir?

21 A. 2005.

22 Q. And besides that degree, do you have any  
23 other degrees?

24 A. No.

25 Q. Okay. And can you tell me, outside of any  
1 employment that you may or may not have had with  
2 BP, what jobs you have had?

3 A. I did an internship in college with  
4 Wyman-Gordon at Aluminum Foundry, and I also did  
5 an internship in college with Harley Davidson, as  
6 a frame designer.

7 Q. Have you had -- excluding any job you may  
8 or may not have had with BP, have you ever had a  
9 job within the petroleum industry?

10 A. No.

11 Q. Sir, what is a "negative test"?

12 A. Same answer.

13 Q. Okay. Sir, is it true that a negative  
14 test tests the integrity of a -- a well?

15 A. Same answer.

16 Q. Can it be used to test the integrity of a  
17 cement job on a well?

18 A. Same answer.

19 Q. Can it be used -- it is, in fact, used to  
20 test the integrity of a well to prevent the influx  
21 of hydrocarbons through a cement job? Is that  
22 correct?

23 A. Same answer.

24 Q. Sir, as of April 20th, 2000 -- as of  
25 April 20, 2010, did BP have a standardized method  
1 to conduct a negative test on a deepwater rig?

2 A. Same answer.

3 Q. Isn't it true that BP didn't have such a  
4 test -- standardized test?

Page 56:06 to 56:10

6 A. Same answer.

7 Q. (BY MR. BICKFORD) And isn't it true that  
8 TransOcean did not have a -- such a standardized  
9 test?

10           A.   Same answer.

Page 56:14 to 56:16

14       Sir, is it -- isn't it a fact that  
15       you were charged to go out and find a procedure to  
16       conduct a negative test?

Page 56:18 to 57:05

18           A.   Same answer.  
19       Q.   (BY MR. BICKFORD)   And, sir, where did you  
20       find that procedure?  
21       A.   Same answer.  
22       Q.   And, sir, was that procedure communicated  
23       to the rig?  
24       A.   Same answer.  
25       Q.   And who did you discuss that procedure  
1       with?  
2       A.   Same answer.  
3       Q.   And, sir, did you discuss your -- what the  
4       results of that procedure should have been with  
5       that rig?

Page 57:07 to 57:09

7           A.   Same answer.  
8       Q.   (BY MR. BICKFORD)   Did you discuss it with  
9       Mr. Kaluza?

Page 57:11 to 58:04

11           A.   Same answer.  
12       Q.   (BY MR. BICKFORD)   Sir, have you ever been  
13       trained to interpret a negative test?  
14       A.   Same answer.  
15       Q.   Sir, had anyone on your drill design team  
16       been trained to interpret a negative test?  
17       A.   Same answer.  
18       Q.   Sir, in all of your education, both in  
19       college and at BP and in any courses that you've  
20       attended, have you ever heard of some -- something  
21       called a "bladder effect," which would apply to  
22       the interpretation results of a negative test?  
23       A.   Same answer.  
24       Q.   In fact, you have not, have you?

25 A. Same answer.

1 Q. So when you were actually sent an E-mail  
2 asking you -- well, you were actually sent an  
3 E-mail asking you how to conduct a negative test,  
4 were you not?

Page 58:06 to 59:22

6 A. Same answer.

7 Q. (BY MR. BICKFORD) And you sent an E-mail  
8 out to your drill team and others asking if anyone  
9 else knew how to conduct a negative test; is that  
10 correct?

11 A. Same answer.

12 Q. Sir, had you conducted -- had you asked  
13 that negative tests be conducted in any other  
14 drilling programs that you had been involved in?

15 A. Same answer.

16 Q. Sir, had you ever been on a drilling  
17 project where a cement plug was set some 3,000  
18 feet below the mud line?

19 A. Same answer.

20 Q. Had you ever been on a drill project where  
21 there was a displacement of mud above a cement  
22 plug at 3300 feet?

23 A. Same answer.

24 Q. Sir, I'd like to direct your attention to  
25 Tab 19 in the black book.

1 MR. BICKFORD: We'll go ahead and  
2 mark this as Exhibit 4512.

3 (Marked Exhibit No. 4512.)

4 Q. (BY MR. BICKFORD) Okay. Sir, this is --  
5 purports to be an E-mail chain from a Robert --  
6 Robert Bodek. And it includes an E-mail from a  
7 Jonathan Bellow, dated March 18th and March 12th,  
8 2010. Have you seen the E-mail from Mr. Bellow?

9 A. Same answer.

10 Q. Okay. And this has been previously  
11 marked, I'm sorry, as Exhibit No. 214.

12 Sir, you're copied on this particular  
13 E-mail from Mr. Bellow, are you not?

14 A. Same answer.

15 Q. Okay. And what Mr. Bellow is stating in  
16 this E-mail was thoughts on the Macondo Well, was  
17 it not?

18 A. Same answer.

19 Q. Okay. And as of March 12th, 2010, he is  
20 concerned about how you-all went about evaluating  
21 the pore pressure on the Macondo type of well; is  
22 that correct?

Page 59:24 to 61:07

24 A. Same answer.

25 Q. (BY MR. BICKFORD) And turning to the --  
1 to the second page of the E-mail, sir, he points  
2 out, does he not, that, "..the DEEP-" -- and this  
3 is the third line down -- "...the DEEPWATER  
4 HORIZON" -- I'm sorry. "We have been spoiled in  
5 exploration on the DEEPWATER HORIZON with having  
6 wells like Tiber, Freedom, Kodiak, Big Kahuna, and  
7 Kaskida that have had salt sections thick enough  
8 to allow us a luxury of a wider drilling margin.  
9 We are very, very good at solve exit now. We have  
10 not drilled a huge number of these 'no salt,  
11 narrow drilling window' wells."

12 Sir, is it true that you didn't have  
13 any experience in drilling a no salt, narrow  
14 drilling window well?

15 A. Same answer.

16 Q. And isn't it true, sir, that none of -- no  
17 one on your team did, either?

18 A. Same answer.

19 Q. Sir, how many wells that had a no salt  
20 narrow drilling window had the people on your  
21 drill team drilled?

22 A. Same answer.

23 Q. Okay. In fact, was BP competent to drill  
24 a Macondo-type well?

25 A. Same answer.

1 Q. Did the BP drill team have the experience  
2 to drill these type of wells?

3 A. Same answer.

4 Q. Didn't Mr. Bellow find that one of the  
5 problems leading up to the March incidents on the  
6 Macondo Well were, in fact, that you were drilling  
7 too fast?

Page 61:09 to 62:09

9 A. Same answer.

10 Q. (BY MR. BICKFORD) This document is part

11 of what's called a "lessons learned," is it not?

12 A. Same answer.

13 Q. Were any of the lessons learned in this  
14 document employed between March and April 20th,  
15 2010, on the Macondo Well?

16 A. Same answer.

17 Q. Sir, a couple of questions about the  
18 cement slurry that was used on the Macondo Well.

19 Isn't it true, sir, that there were  
20 three cement lab tests that were performed on the  
21 nitrogen cement design?

22 A. Same answer.

23 Q. And isn't it true that one was performed  
24 on February 13th, 2010?

25 A. Same answer.

1 Q. Wasn't a second test performed on  
2 February 17th, 2010?

3 A. Same answer.

4 Q. And wasn't a third test performed on  
5 April 12th, 2010?

6 A. Same answer.

7 Q. Sir, you knew that the February 13th,  
8 2010, test was -- that the cement slurry failed  
9 due to a nitrogen breakout; is that correct?

Page 62:12 to 62:16

12 A. Same answer.

13 Q. (BY MR. BICKFORD) Okay. You knew, sir,  
14 that the February 13th, 2010, slurry could not  
15 have been used in the DEEPWATER HORIZON well at  
16 the completion of the well, sir; is that correct?

Page 62:19 to 62:25

19 A. Same answer.

20 Q. (BY MR. BICKFORD) Okay. You knew that  
21 it -- that cement, as it was designed on  
22 February 13th, 2010, and tested, would not have  
23 isolated the hydrocarbon zone from the well at the  
24 completion of the well on April 20th, 2010, did  
25 you?

Page 63:03 to 63:08

3 A. Same answer.

4 Q. (BY MR. BICKFORD) Sir, you knew that the  
5 slurry that was tested on February 17, 2010, would  
6 not have -- if used, would not have created a good  
7 cement job as of the state of the well on  
8 April 20th, 2010; is that correct?

Page 63:11 to 63:21

11 A. Same answer.  
12 Q. (BY MR. BICKFORD) Okay. And that -- the  
13 results of that test were reported to you, were  
14 they not?  
15 A. Same answer.  
16 Q. And the results of those tests were  
17 reported to members of your team; is that correct?  
18 A. Same answer.  
19 Q. And isn't it a fact, sir, that there were  
20 abnormal results as of April 12th, 2010, on the  
21 nitrofied cement?

Page 63:24 to 64:05

24 A. Same answer.  
25 Q. (BY MR. BICKFORD) And isn't it a fact,  
1 sir, that the nitrofied cement, as it was mixed in  
2 a slurry as of April 12th, 2010, would not have  
3 created a good cement job at the bottom of the  
4 DEEPWATER HORIZON well as it -- the Macondo Well  
5 as it stood on April 20, 2010?

Page 64:07 to 89:06

7 MR. SCHWARTZ: Objection; form.  
8 A. Same answer.  
9 Q. (BY MR. BICKFORD) Isn't it true, sir,  
10 that the cement slurry that was actually used on  
11 or about April 19th, 2010, on the Macondo Well was  
12 not -- that you did not see a lab test on that  
13 cement prior to the cementing job?  
14 A. Same answer.  
15 Q. Isn't it true that you've never seen a lab  
16 test on that cement, even after the cementing job?  
17 A. Same answer.  
18 Q. Isn't it true that no one on your well  
19 team saw a result of a lab testing on that cement  
20 slurry that was used on April -- on or about

21 April 19, 2010, prior to the cement job?  
22 A. Same answer.  
23 Q. Okay. Sir, have you ever cemented a --  
24 have you ever participated in a well where you did  
25 not receive the lab tests from the cement slurry  
1 used on the final cementing job of the well?  
2 A. Same answer.  
3 Q. Sir, does that violate BP internal  
4 drilling policies?  
5 MR. MORRISS: Form.  
6 A. Same answer.  
7 Q. (BY MR. BICKFORD) Do you think that's  
8 something that you should have asked for, sir?  
9 A. Same answer.  
10 MR. MORRISS: Form.  
11 Q. (BY MR. BICKFORD) Why didn't you ask for  
12 it, sir?  
13 MR. MORRISS: Form.  
14 A. Same answer.  
15 Q. (BY MR. BICKFORD) Why didn't members of  
16 your drill team ask for it, sir?  
17 MR. MORRISS: Form.  
18 A. Same answer.  
19 Q. (BY MR. BICKFORD) Sir, what should the  
20 compressive strength of the slurry have been,  
21 given the conditions downhole on the Macondo Well?  
22 A. Same answer.  
23 Q. Sir, did you know what the conditioning  
24 time of the cement slurry was that was introduced  
25 in the final cement job on April 19th, 2010?  
1 A. Same answer.  
2 Q. Okay. Would it have been important for  
3 you to know what the conditioning time was prior  
4 to running a positive test on the well, sir?  
5 A. Same answer.  
6 Q. What would the effects have been of  
7 running a positive test, sir, on the well had the  
8 cement not fully conditioned and cured?  
9 A. Same answer.  
10 Q. Wouldn't the effects have been  
11 channelling, for one?  
12 MR. MORRISS: Form.  
13 A. Same answer.  
14 MR. BICKFORD: How much time?  
15 THE VIDEOGRAPHER: I'm sorry. Give  
16 me one second. I apologize. 16 minutes, you've

17 used --  
18 MR. BICKFORD: Pardon me?  
19 THE VIDEOGRAPHER: 16 minutes, you've  
20 used --  
21 MR. BICKFORD: Okay.  
22 THE VIDEOGRAPHER: -- on this tape.  
23 MR. BICKFORD: Got it.  
24 Q. (BY MR. BICKFORD) Sir, it was your -- you  
25 participated in the decision to use a spacer made  
1 from a combination of lost circulation materials  
2 that was onboard the DEEPWATER HORIZON, did you  
3 not?  
4 A. Same answer.  
5 Q. Okay. And, in fact, on -- did you know  
6 the effects of using that spacer on the well?  
7 A. Same answer.  
8 Q. Had any testing been done on the  
9 combination of spacers used that were put into the  
10 well?  
11 MS. SCOFIELD: Objection; form.  
12 A. Same answer.  
13 Q. (BY MR. BICKFORD) Would that have been a  
14 prudent thing to do prior to introducing the  
15 spacer into the well?  
16 MS. SCOFIELD: Objection; form.  
17 A. Same answer.  
18 Q. (BY MR. BICKFORD) Do you know what  
19 effects that spacer would have had on the negative  
20 pressure test that was done thereafter?  
21 MS. SCOFIELD: Objection; form.  
22 MR. MORRIS: Form.  
23 A. Same answer.  
24 Q. (BY MR. BICKFORD) Sir, would you agree  
25 with me that one of the principal causes of the  
1 blowout at the Macondo Well was a failure of the  
2 primary cement job?  
3 MR. SCHWARTZ: Objection; form.  
4 A. Same answer.  
5 Q. (BY MR. BICKFORD) Sir, you -- did you  
6 participate in the decision to send the  
7 Schlumberger crew home off the rig?  
8 A. Same answer.  
9 Q. Okay. You were aware that there was a  
10 Schlumberger crew onboard the DEEPWATER HORIZON  
11 prepared to do a cement bond log, were you not?  
12 A. Same answer.

13 Q. Okay. You were aware that the -- that  
14 they did not perform the cement bond log, were you  
15 not?

16 A. Same answer.

17 Q. Would a cement bond log have shown where  
18 the true top of the cement was?

19 A. Same answer.

20 Q. Would the cement bond log have shown the  
21 integrity of the cement job?

22 A. Same answer.

23 Q. Would the cement bond log have indicated  
24 whether or not there had been any channelling  
25 during the primary cement job?

1 A. Same answer.

2 Q. How far above the top of the hydrocarbon  
3 producing zone was the cement -- was the top of  
4 the cement on the final cement job?

5 A. Same answer.

6 Q. Okay. In fact, it was only about 500 feet  
7 above that zone; is that correct, sir?

8 MR. MORRISS: Form.

9 A. Same answer.

10 Q. (BY MR. BICKFORD) And, in fact, if it was  
11 less than a thousand feet above that zone, BP  
12 procedures -- practices and procedures called for  
13 you to run an objective -- an objective cement  
14 integrity test, did they not?

15 MR. MORRISS: Form.

16 A. Same answer.

17 Q. (BY MR. BICKFORD) And there was no  
18 objective cement integrity test performed, was  
19 there?

20 A. Same answer.

21 Q. But had the cement bond log been run, that  
22 would have qualified as an objective integrity  
23 test, would it have not?

24 MR. MORRISS: Form.

25 A. Same answer.

1 Q. (BY MR. BICKFORD) Sir, was the -- the  
2 7-inch production casing put in an 8 and a half by  
3 9 hole?

4 A. Same answer.

5 Q. And, sir, that gave you 1 and a half  
6 inches around the pipe; is that correct?

7 A. Same answer.

8 Q. And, sir, did a 1.5 hole with a 7-inch

9 production casing meet API RP 65, best practices?

10 MR. MORRISS: Form.

11 A. Same answer.

12 Q. (BY MR. BICKFORD) Sir, why wasn't a  
13 5-inch casing run at the bottom of the hole?

14 A. Same answer.

15 Q. Was it because the well couldn't produce  
16 enough to justify its cost with a 5-inch casing at  
17 the bottom of the hole, sir?

18 MR. MORRISS: Form.

19 A. Same answer.

20 Q. (BY MR. BICKFORD) Had you requested of  
21 anyone at BP to run a 5-inch casing at the bottom  
22 of the hole, sir?

23 MR. MORRISS: Form.

24 A. Same answer.

25 Q. (BY MR. BICKFORD) Sir, I've asked you  
1 questions concerning the design of the DEEPWATER  
2 HORIZON Macondo Well. If I continue to ask you  
3 questions concerning the manner which you  
4 designed -- you and your team designed the well,  
5 is it your intention to continue to invoke your  
6 right not to answer the questions under the Fifth  
7 Amendment?

8 A. Yes.

9 Q. Sir, I've asked you questions about your  
10 employment at BP, your evaluations, your  
11 promotions, who you worked with. If I continue to  
12 ask you questions concerning those matters, is it  
13 your intention to continue to invoke the Fifth  
14 Amendment -- your Fifth Amendment right not to  
15 answer those questions?

16 A. Yes.

17 Q. Okay. Sir, I've asked you questions  
18 concerning your participation in designing and  
19 implementing a negative pressure test utilized  
20 aboard the DEEPWATER HORIZON in connection with  
21 the Macondo Well. Is it your intention -- if I  
22 continue to ask you questions on that subject, is  
23 it your intention to continue to invoke your right  
24 not to answer questions under your right under the  
25 Fifth Amendment?

1 A. Yes.

2 Q. Okay. Sir, I've asked you questions  
3 concerning the cement that was utilized on the  
4 DEEPWATER HORIZON, when it was utilized, the type

5 of cement that was utilized, the design of the  
6 cement, and the design of the centralizers that  
7 were placed onboard the DEEPWATER HORIZON. If I  
8 continue to ask you questions concerning the  
9 cement design, the type of cement, the cement test  
10 ing, the cement slurry used, is it your intention  
11 to continue to invoke your right not to answer  
12 such questions predicated upon your rights under  
13 the Fifth Amendment?

14 A. Yes.

15 Q. Sir, I've asked you questions concerning a  
16 number of E-mails that we've looked at. If I  
17 continue to show you E-mails purportedly authored  
18 by you in connection with the Macondo Well, is it  
19 your intention to refuse to -- is it your  
20 intention not to testify concerning their  
21 identification or content predicated upon your  
22 rights under the Fifth Amendment?

23 A. Yes.

24 MR. BICKFORD: How much time?

25 THE VIDEOGRAPHER: You've been on the  
1 record 25 minutes.

2 Q. (BY MR. BICKFORD) I'm going to try to go  
3 through some documents to get them into evidence,  
4 sir.

5 Let's start with Tab No. 51, which  
6 I'm going to mark as Exhibit 4513.

7 (Marked Exhibit No. 4513.)

8 Q. (BY MR. BICKFORD) Sir, this is an  
9 April 16th, 2010, E-mail from you to  
10 Mr. Sepulvado, Kaluza, Lambert, Guide, Hafle,  
11 Cicales, Walz, concerning updated procedures and  
12 concerning your current plan. Did you author this  
13 document?

14 A. Same answer.

15 Q. Okay. Is -- does -- was this -- is this  
16 document the plan that was in place for completing  
17 the Macondo Well?

18 A. Same answer.

19 Q. Okay. And does it detail the production  
20 casing operations that were to take place on the  
21 Macondo Well?

22 A. Same answer.

23 Q. Does it detail where the surface cement  
24 plug was to be placed?

25 A. Same answer.

1 Q. Does it detail the cementing production  
2 casing procedures?  
3 A. Same answer.  
4 Q. Okay. Was this approved, sir?  
5 A. Same answer.  
6 Q. Did this go through a Management of Change  
7 order, sir?  
8 A. Same answer.  
9 Q. Was it submitted to the MMS --  
10 A. Same answer.  
11 Q. -- for approval?  
12 Sir, I direct your attention to  
13 Exhibit No. 52 -- I mean, Tab No. 52, which I'll  
14 mark as Exhibit 4514.  
15 (Marked Exhibit No. 4514.)  
16 Q. (BY MR. BICKFORD) Sir, this purports to  
17 be an E-mail chain ending on April 16th from John  
18 Guide to David Sims attaching an E-mail chain. I  
19 think this has already been introduced as an  
20 exhibit.  
21 Sir, have you ever seen this document  
22 before?  
23 A. Same answer.  
24 Q. The -- well, sorry, it's Exhibit No. 2579.  
25 So we'll save that.  
1 You were never shown this document,  
2 sir?  
3 A. Same answer.  
4 Q. Do -- were you aware of Mr. Guide's  
5 opinion regarding the additional centralizers?  
6 A. Same answer.  
7 Q. Sir, when Mr. Guide said, "I just found  
8 out the stock collars are not part of the  
9 centralizers," you stated: "Also will take ten  
10 hours to install them. We are adding 45 pieces  
11 that can come off as of last -- off as a  
12 last-minute addition. I do not like this; and as  
13 David approved my -- in my absence, I did not  
14 question; but now I'm concerned about using them."  
15 Were you aware that Mr. Guide was  
16 concerned about using the centralizers, sir?  
17 A. Same answer.  
18 Q. And was that based upon your information  
19 back to the shore about what centralizers they  
20 were -- what type of centralizers they were?  
21 A. Same answer.

22 Q. Go to Tab 53.

23 MR. BICKFORD: Which, now, I'll mark  
24 as Exhibit 4514.

25 (Marked Morel Exhibit No. 4514.)

1 Q. (BY MR. BICKFORD) This purports to be an  
2 E-mail chain from Brett Cocalles to you and then  
3 from you to Brett Cocalles. Sir, in fact, you  
4 wrote Brett Cocalles concerning the centralizers on  
5 April 16th, 2010, did you not?

6 A. Same answer.

7 Q. And you stated, quote: "If we think that  
8 the hole is relatively straight, what if you place  
9 them every three joints from the shoe, which  
10 almost gets you to the top of the cement. You  
11 should maintain the pipe standoff between the  
12 centralizers, the exception -- with the exception  
13 if the hole is too washed out to move up or down a  
14 joint. Just my thoughts on the physics of it."

15 Was that your E-mail to Mr. Cocalles?

16 A. Same answer.

17 Q. In fact, previous to this E-mail on  
18 Page 2, you were questioning Mr. Gagliano's  
19 centralizer requirements, weren't you?

20 A. Same answer.

21 Q. And in fact, you didn't understand why he  
22 wanted to use so many centralizers, did you?

23 MR. MORRISS: Object to form.

24 A. Same answer.

25 Q. (BY MR. BICKFORD) And, in fact,  
1 Mr. Cocalles said that -- corrected you and told  
2 you that, quote: "Even if a hole is perfectly  
3 straight, a straight piece of pipe, even in  
4 tension, will not seek the perfect center of the  
5 hole unless it is -- unless it has something to  
6 centralize it."

7 Did I read that correctly?

8 A. Same answer.

9 Q. Was he disagreeing with you, sir?

10 A. Same answer.

11 Q. But at that point, Mr. Cocalles didn't seem  
12 to care about whether or not there were going to  
13 be centralizers; isn't that correct?

14 MR. MORRISS: Form.

15 A. Same answer.

16 Q. (BY MR. BICKFORD) Didn't he write you:  
17 "But who cares? It's done. End of story. Will

18 probably be fine and we'll get a good cement job.  
19 I would rather have to squeeze than get stuck  
20 above the WH. So, Guide is right on the  
21 risk/reward equation."

22 Did I read that correctly, sir?

23 A. Same answer.

24 Q. Was that your opinion, that you'd  
25 "probably be fine"?

1 MR. MORRISS: Form.

2 A. Same answer.

3 Q. (BY MR. BICKFORD) Were you willing to  
4 risk the lives of the men and women on that rig  
5 as -- as a probability, sir?

6 MR. MORRISS: Form.

7 MR. MEHTA: Objection.

8 A. Same answer.

9 Q. (BY MR. BICKFORD) And was there a risk  
10 assessment done as to how "probably fine" you'd be  
11 with that cement job?

12 MR. MORRISS: Form.

13 A. Same answer.

14 Q. (BY MR. BICKFORD) And you had an option  
15 to stop that job out there, didn't you, sir?

16 A. Same answer.

17 MR. BICKFORD: Tab No. 54. We will  
18 mark it as 4515.

19 (Marked Exhibit No. 4515.)

20 Q. (BY MR. BICKFORD) Sir, this purports to  
21 be a series of E-mails from you to a  
22 representative of Halliburton; is that correct,  
23 sir?

24 A. Same answer.

25 Q. Dated April 16th, 2010; is that, sir?

1 A. Same answer.

2 Q. And you're communicating information  
3 regarding the well, sir?

4 A. Same answer.

5 Q. And why are you talking with Halliburton  
6 about this information, sir?

7 A. Same answer.

8 Q. Isn't it a fact, sir, that you were  
9 confused as to the information that Halliburton  
10 was sending you?

11 MR. MORRISS: Form.

12 A. Same answer.

13 Q. (BY MR. BICKFORD) Sir, the next tab is

14 55. It's already marked as Exhibit No. 203. Are  
15 you there, sir?

16 A. Yeah.

17 Q. Sir, this purports to be an E-mail from  
18 you to Mr. Cocalles and from Mr. Cocalles back to  
19 you. Sir, did you think that the centralizers as  
20 they -- as you had centralized the -- strike that.

21 Sir, was it your opinion that the  
22 centralizers at that point were adequate for the  
23 particular sands that you were trying to  
24 centralize the pipe?

25 A. Same answer.

1 Q. Sir, flip to -- sir, Tab No. 59 is Exhibit  
2 No. 130 -- 1390. Sir, have you seen this document  
3 before?

4 A. Same answer.

5 Q. Did you author this document, sir?

6 A. Same answer.

7 Q. Sir, is this the -- is this the E-mail  
8 where you requested from Mr. Hafle, Mr. Walz,  
9 Mr. Cocalles, and Mr. Guide whether or not there  
10 were any MMS requirements for a negative test?

11 A. Same answer.

12 Q. Did anyone respond that they had found  
13 a -- MMS requirements for a negative test?

14 A. Same answer.

15 Q. And, in fact, all you were able to find,  
16 sir, was a -- a negative -- regarding a negative  
17 test was the CFR 30, 250, Doc 422; is that  
18 correct, sir?

19 MR. MORRISS: Form.

20 A. Same answer.

21 Q. (BY MR. BICKFORD) And you set forth that  
22 in your E-mail, did you not?

23 A. Same answer.

24 Q. And did you communicate that information  
25 to the rig?

1 A. Same answer.

2 Q. Did you communicate that information to  
3 Mr. Kaluza?

4 A. Same answer.

5 Q. Did you communicate that information to  
6 any TransOcean employees on the rig?

7 A. Same answer.

8 Q. Did you communicate that information to  
9 Mr. Vidrine?

10 A. Same answer.

11 MR. BICKFORD: At this time, I'm  
12 going to stop and I will reserve the rest of my  
13 time. How much do I have?

14 THE VIDEOGRAPHER: Just give me a  
15 minute. We'll go off the record, and I'll be able  
16 to tell you.

17 Off the record at 10:16 A.M., ending  
18 Tape 2.

19 (Break from 10:16 a.m. to 10:25 a.m.)

20 THE VIDEOGRAPHER: On the record at  
21 10:25 A.M., beginning Tape 3.

22 E X A M I N A T I O N

23 BY MR. UNDERHILL:

24 Q. Mr. Morel, my name is Mike Underhill. I  
25 represent the United States.

1 Mr. Morel, you were aware that  
2 cementing the Macondo Well was a safety-critical  
3 operation, were you not?

4 A. Same answer.

5 Q. And you understood that, if the well  
6 wasn't cemented properly and safely, that it posed  
7 the risk to the rig, to its crew, and to the  
8 environment, correct?

9 MR. MORRISS: Form.

10 A. Same answer.

11 Q. (BY MR. UNDERHILL) And you also  
12 understood that Halliburton was going to be the  
13 contractor for BP that was designing the cement  
14 job, correct?

15 A. Same answer.

16 Q. You also understood that Halliburton would  
17 be performing some tests. We won't detail them  
18 now, but they would be performing some tests that  
19 would indicate whether the cement design was  
20 proper and safe, correct?

21 A. Same answer.

22 Q. And you personally knew Jesse Gagliano,  
23 the representative for Halliburton dealing with BP  
24 for the cement job on the Macondo Well, correct?

25 A. Same answer.

1 Q. And, in fact, you had personal -- I should  
2 say -- strike that.

3 You had business dealings with  
4 Mr. Gagliano concerning the cementing of the  
5 Macondo Well, correct?

6 A. Same answer.

7 Q. And, in fact, you specifically had  
8 dealings with Mr. Gagliano from Halliburton on  
9 cementing the production casing for Macondo Well,  
10 correct?

11 A. Same answer.

12 Q. You were aware that Mr. Gagliano was -- or  
13 either himself or somebody at Halliburton was  
14 performing some tests concerning the cement design  
15 for the production casing on Macondo, correct?

16 A. Same answer.

17 Q. In fact, you had concerns about  
18 Mr. Gagliano's competency to perform the cement  
19 design and related duties for the production  
20 casing on Macondo Well, correct?

21 MR. MORRIS: Form.

22 MR. SCHWARTZ: Objection; form.

23 A. Same answer.

24 Q. (BY MR. UNDERHILL) In fact, you put your  
25 concerns in writing to an E-mail from one of your  
1 colleagues at BP, Mark Halfe, correct?

2 A. Same answer.

3 Q. In fact, you did so on April 17th of 2010,  
4 which is three days before the blowout aboard  
5 DEEPWATER HORIZON, correct?

6 A. Same answer.

7 Q. Directing your attention and other counsel  
8 to Tab 8 in the Government's binder previously  
9 marked as Exhibit 1396; further drawing your  
10 attention to the bottom of that E-mail string on  
11 the second page, which is BPHZN2179MDL00315412.

12 At the bottom of that page, there is  
13 an E-mail from you, Mr. Morel, to Mark Halfe sent  
14 Saturday, April 17th, 2010, correct?

15 MR. MEHTA: Sorry to interrupt.  
16 Let's just get Mr. Morel to the right exhibit  
17 number and tab number and page again.

18 MR. UNDERHILL: Tab 8, the second  
19 page, bottom of the page.

20 MR. MEHTA: Thank you. That's fine.

21 MR. UNDERHILL: Sure.

22 A. Okay.

23 Q. (BY MR. UNDERHILL) And do you need the  
24 answer or the question again?

25 A. Yes.

1 MR. UNDERHILL: Could we have it read

2 back, please? Just to make it easy. Let's make  
3 it easy.

4 Q. (BY MR. UNDERHILL) At the bottom of that  
5 page, Bates stamp I read into the record  
6 previously, there is an E-mail from you to  
7 Mr. Mark Halfe at BP sent April 17, 2010, which is  
8 three days before the DEEPWATER HORIZON blowout,  
9 correct?

10 A. Same answer.

11 Q. The title or the subject matter of the  
12 E-mail, according to what's written here, is,  
13 quote, "Lab Tests," close quote, correct?

14 A. Same answer.

15 Q. I'd like you to tell me if I read this  
16 into the record correctly; and I'm quoting from  
17 the E-mail, yours to Mr. Hafle on April 17th of  
18 2010. Quote: "I'm about to send this to John and  
19 Greg, but wanted to send it past you first to make  
20 sure I'm not being out of line. Jesse isn't  
21 cutting it anymore."

22 Continuing on to the next page,  
23 quote: "John and Greg, I need help next week  
24 dealing with Jesse. I asked for these lab tests  
25 to be completed multiple times early last week;  
1 and Jesse still waited until the last minute, as  
2 he has done throughout this well. This doesn't  
3 give us enough time to tweak the slurry to meet  
4 our needs.

5 "As a team, we requested that he run  
6 another test with 9 gallons on Wednesday. I know  
7 the first test had issues, but I do not understand  
8 what took so long to get it underway and why a new  
9 one wasn't put on right away. There's no excuse  
10 for this as the cement and chemicals we are  
11 running has been on location for weeks.

12 "Thank you, Brian," close quote.

13 Did I read that E-mail correctly?

14 A. Same answer.

15 Q. Did you, in fact, send that E-mail to  
16 Mr. Hafle on April 17th of 2010?

17 A. Same answer.

18 Q. On April 17th, 2010, were you acting  
19 within the course and scope of your duties, your  
20 professional duties as an employee of BP?

21 A. Same answer.

22 Q. And, in fact, let's say any time in which

23 you dealt with any subject matter concerning the  
24 Macondo Well, you were, in fact, acting within the  
25 course and scope of your duties as an employee of  
1 BP, correct?

2 A. Same answer.

3 Q. And, in fact, on April 20th, 2010, you  
4 were acting within the course and scope of your  
5 duties at an employee of BP, correct?

6 A. Same answer.

7 Q. Back to the E-mail. To the first page of  
8 that exhibit, please, 1396, bottom of the page, an  
9 E-mail string from Gregory S. Walz, W-A-L-Z, to  
10 you, Mr. Morel; to Mr. Hafle; to Mr. Cocalles; to  
11 Mr. Guide, "Subject: Lab tests," sent Sunday,  
12 April 18th, 2010, correct?

13 A. Same answer.

14 Q. The response from Mr. Walz to you and the  
15 other gentlemen I referred to in the  
16 E-mail, quote: "John and I already have a meeting  
17 with Halliburton scheduled tomorrow afternoon,"  
18 period, close quote.

19 Did I read that correctly?

20 A. Same answer.

21 Q. Did you, in fact, receive that -- strike  
22 that.

23 You, in fact, did receive that E-mail  
24 on or about April 18th of 2010, correct?

25 A. Same answer.

1 Q. In fact, during the performance of the  
2 cement job on the Macondo Well for the production  
3 casing, you were actually aboard DEEPWATER  
4 HORIZON, were you not?

5 A. Same answer.

6 Q. And you were there specifically to  
7 oversee, among other things, the performance of  
8 the cement job on the production casing, correct?

9 MR. MORRISS: Form.

10 A. Same answer.

11 Q. (BY MR. UNDERHILL) And you were there as  
12 a BP employee acting within the course and scope  
13 of your duties to assist in, among other things,  
14 overseeing the performance of the cement job on  
15 the production casing, correct?

16 MR. MORRISS: Form.

17 A. Same answer.

18 Q. (BY MR. UNDERHILL) In fact, you

19 personally observed all or portions of the cement  
20 job on the production casing for the Macondo Well,  
21 correct?  
22 MR. MORRISS: Form.  
23 A. Same answer.  
24 Q. (BY MR. UNDERHILL) And, in fact, prior to  
25 the actual performance and completion of the  
1 cement job for the production casing on the  
2 Macondo Well, you, as a BP employee, were fully  
3 aware that BP had not received all of the lab  
4 tests concerning the final slurry mix that was  
5 pumped for the production casing, correct?  
6 A. Same answer.

Page 89:08 to 89:10

8 Q. (BY MR. UNDERHILL) You were aware that  
9 that was an unsafe practice, correct?  
10 A. Same answer.

Page 89:12 to 89:16

12 Q. (BY MR. UNDERHILL) You were also aware  
13 that that was in conflict with BP's internal  
14 guidelines, instructions, and/or mandatory  
15 requirements, correct?  
16 A. Same answer.

Page 89:18 to 90:05

18 Q. (BY MR. UNDERHILL) In fact, you were  
19 aware that it was a requirement within BP that lab  
20 tests be reviewed before a cement job was pumped,  
21 correct?  
22 MR. MORRISS: Form.  
23 A. Same answer.  
24 Q. (BY MR. UNDERHILL) And yet, nevertheless,  
25 you, among others, allowed the cement for the  
1 production casing to be pumped and performed and  
2 allegedly completed without first receiving and  
3 reviewing all of the lab tests for the production  
4 casing, correct?  
5 A. Same answer.

Page 90:07 to 90:12

7 Q. (BY MR. UNDERHILL) And, in fact, had you  
8 demanded and/or required receipt of all lab tests  
9 for the cement job on the production casing on the  
10 Macondo Well, you would have, in fact, been aware  
11 that some of those tests either had not been  
12 completed or, in fact, had been canceled, correct?

Page 90:15 to 90:21

15 A. Same answer.  
16 Q. (BY MR. UNDERHILL) And you're aware that,  
17 had the cement job been properly performed and  
18 completed on the Macondo Well with respect to the  
19 production casing cement job, this accident, this  
20 tragedy, the DEEPWATER HORIZON, would not have  
21 occurred, correct?

Page 90:25 to 91:06

25 Q. (BY MR. UNDERHILL) In fact, the failure  
1 of the cement job for the production casing on the  
2 Macondo Well, that failure led directly, along  
3 with other factors, to the DEEPWATER HORIZON  
4 tragedy that commenced on April 20th of 2010,  
5 correct?  
6 A. Same answer.

Page 91:17 to 91:21

17 Q. (BY MR. UNDERHILL) And again, you're  
18 aware that had the production job -- production  
19 casing cement job been performed properly, the  
20 blowout on April 20th and all its consequences  
21 would not have occurred, correct?

Page 91:23 to 92:02

23 A. Same answer.  
24 Q. (BY MR. UNDERHILL) And you were aware, as  
25 of April 20th of 2010, that the cement job  
1 performed on the production casing was an  
2 essential safety-critical job, correct?

Page 92:04 to 92:10

4 A. Same answer.

5 Q. (BY MR. UNDERHILL) And prior to  
6 April 20th, 2010, BP did not, in fact, remove  
7 Mr. Gagliano from his duties with respect to  
8 either designing or making recommendations  
9 concerning the cement job of the production casing  
10 for the Macondo Well, correct?

Page 92:12 to 92:17

12 A. Same answer.  
13 Q. (BY MR. UNDERHILL) And BP did not require  
14 Mr. Gagliano to produce all of the tests  
15 applicable to the cement job for the production  
16 casing on the Macondo Well prior to the time the  
17 cement was actually pumped?

Page 92:19 to 92:19

19 A. Same answer.

Page 93:15 to 94:19

15 Q. (BY MR. UNDERHILL) Turn to Tab 16,  
16 please. Tab 16 has been previously marked as  
17 Exhibit 570.  
18 For the record, it's an application  
19 for a permit to modify the Macondo Well dated on  
20 or about April 16th, 2010.  
21 You were aware, sir, that on or about  
22 April 16th, 2010, BP submitted to the Minerals  
23 Management Service an application for a permit to  
24 modify the Macondo Well, correct?  
25 A. Same answer.  
1 Q. And you were aware that within that  
2 document, Exhibit 570, BP provided to MMS a  
3 Temporary Abandonment Procedure for the Macondo  
4 Well, correct?  
5 A. Same answer.  
6 Q. And turning to the third page of  
7 Exhibit 570, there is, in fact, a procedure  
8 called, quote, "Temporary Abandonment Procedure,"  
9 close quote, correct?  
10 A. Same answer.  
11 Q. And, in fact, that Temporary Abandonment  
12 Procedure includes, among other things, a  
13 procedure for a negative test to be performed on

14 the Macondo Well, correct?  
15 A. Same answer.  
16 Q. And you were aware that BP had provided to  
17 MMS within Exhibit 570 the procedures it specified  
18 to use concerning the negative pressure test,  
19 correct?

Page 94:21 to 98:07

21 A. Same answer.  
22 Q. (BY MR. UNDERHILL) If you could turn to,  
23 please, Exhibit -- pardon me, Tab 12, Exhibit 97.  
24 Tab 12 has been marked as Exhibit 97 in a prior  
25 deposition.  
1 Exhibit 97 is an E-mail string  
2 containing two E-mails, both from you, correct?  
3 A. Same answer.  
4 Q. The first E-mail is from you, Brian Morel,  
5 dated Tuesday, April 20th, 2010, the date of the  
6 DEEPWATER HORIZON blowout, sent to yourself, Don  
7 Vidrine, Robert Kaluza, Lee Lambert, and Earl Lee,  
8 correct?  
9 A. Same answer.  
10 Q. Also was copied to John Guide, Mark Halfe,  
11 Brett Cocalles, and Greg Walz, correct?  
12 A. Same answer.  
13 Q. The subject of the E-mail sent on  
14 April 20th, 2010, as part of Exhibit 97 is titled  
15 with a subject, quote, "Ops Note," closed quote,  
16 correct?  
17 A. Same answer.  
18 Q. And the op note sent to the rig on  
19 April 20th by you -- strike that.  
20 This ops note was sent to the rig on  
21 April 20th of 2010, correct?  
22 A. Same answer.  
23 Q. And two of the individuals on that E-mail  
24 sent April 20th, 2010, to the rig -- two of the  
25 individuals that it was sent to are Don Vidrine  
1 and Robert Kaluza, correct?  
2 A. Same answer.  
3 Q. Robert Kaluza and Don Vidrine were the  
4 well site leaders aboard the DEEPWATER HORIZON on  
5 April 10th -- strike that -- April 20th, 2010,  
6 correct?  
7 MR. MORRISS: Form.

8 A. Same answer.

9 Q. (BY MR. UNDERHILL) And, in fact, Don  
10 Vidrine and Robert Kaluza, both well site leaders  
11 for BP aboard DEEPWATER HORIZON performed or  
12 assisted in performing the negative pressure test  
13 conducted on the Macondo Well that day, correct?

14 MR. MORRISS: Form.

15 A. Same answer.

16 Q. (BY MR. UNDERHILL) And this ops note sent  
17 by you to Mr. Vidrine and Mr. Kaluza, among  
18 others, on April 20th, 2010, specified the  
19 temporary abandonment procedures to be used aboard  
20 the rig that day for the Macondo Well, correct?

21 A. Same answer.

22 Q. And, in fact, the ops note sent to the rig  
23 and its well site leaders on April 20th, 2010,  
24 contained a Temporary Abandonment Procedure that  
25 the well site leaders were instructed to use,  
1 correct?

2 A. Same answer.

3 Q. And, in fact, the Temporary Abandonment  
4 Procedure contained in your ops note as part of  
5 Exhibit 97 differed from the Temporary Abandonment  
6 Procedure that had been approved by MMS in  
7 Exhibit 570, correct?

8 A. Same answer.

9 MR. MORRISS: Form.

10 Q. (BY MR. UNDERHILL) That was, in fact, a  
11 violation of the permit to modify the well  
12 submitted to MMS on or about April 16th of 2010,  
13 correct?

14 MR. MORRISS: Form.

15 A. Same answer.

16 Q. (BY MR. UNDERHILL) And for clarification,  
17 the permit I'm referring to is Exhibit 570.

18 That, in fact, was a violation of the  
19 permit. That is, the ops note in which the  
20 Temporary Abandonment Procedure was sent to the  
21 rig was in violation of the permit approved by  
22 MMS, correct?

23 MR. MORRISS: Form.

24 A. Same answer.

25 Q. (BY MR. UNDERHILL) And you are aware that  
1 that was a violation of the permit, correct?

2 MR. MORRISS: Form.

3 A. Same answer.

4 Q. (BY MR. UNDERHILL) You were aware of --  
5 that the negative pressure test that was performed  
6 on the Macondo Well on April 20th, 2010, was a  
7 safety-critical procedure, correct?

Page 98:09 to 98:14

9 A. Same answer.  
10 Q. (BY MR. UNDERHILL) And, in fact, that was  
11 the final test to be performed to assure that  
12 hydrocarbons were not flowing into the Macondo  
13 Well prior to the temporary abandonment of that  
14 well, correct?

Page 98:16 to 98:21

16 A. Same answer.  
17 Q. (BY MR. UNDERHILL) And you were aware  
18 that, because it was the final test to assure the  
19 integrity of the well prior to temporary  
20 abandonment, it was especially safety-critical,  
21 correct?

Page 98:23 to 99:04

23 A. Same answer.  
24 Q. (BY MR. UNDERHILL) And the ops note sent  
25 to the rig as part of Exhibit 97 was sent by you  
1 to the rig and its well site leaders knowing that  
2 it was a violation of the MMS permit to modify the  
3 well; that is, the permit which is Exhibit 570,  
4 correct?

Page 99:06 to 99:11

6 A. Same answer.  
7 Q. (BY MR. UNDERHILL) The ops note sent to  
8 the rig on April 20th of 2010, which is part of  
9 Exhibit 97, was, in fact, also approved by, among  
10 others, the well team leader for Macondo Well,  
11 John Guide, correct?

Page 99:13 to 99:16

13 A. Same answer.  
14 Q. (BY MR. UNDERHILL) It was also approved

15 by Mark Hafle, another BP engineer in Houston,  
16 correct?

Page 99:18 to 99:24

18 A. Same answer.  
19 Q. (BY MR. UNDERHILL) And prior to sending  
20 out the ops note which is part of Exhibit 97,  
21 nobody from BP, including but not limited to,  
22 Mr. Guide, David Sims, Mr. Walz, or Mr. Hafle --  
23 objected to the procedure or instructed you not to  
24 send it, correct?

Page 100:01 to 101:09

1 A. Same answer.  
2 Q. (BY MR. UNDERHILL) And specifically, on  
3 April 20th, 2010, when you sent the op notes to  
4 the rig, which is contained in Exhibit 97, you  
5 were acting within the course and scope of your  
6 duties as a BP employee with respect to the  
7 Macondo Well, correct?  
8 A. Same answer.  
9 Q. Also part of Exhibit 97 at the top of the  
10 string is an E-mail from you to Cynthia M. Holik,  
11 H-O-L-I-K, copied to Gregory Walz and Doug Chester  
12 on April 26th of 2010, correct?  
13 A. Same answer.  
14 Q. And the title of that E-mail was also  
15 called, quote, "Ops Note," close quote, correct?  
16 A. Same answer.  
17 Q. I'll read the E-mail into the record and  
18 I'd ask you to tell me whether I've read it  
19 correctly.  
20 Quote, "Here is the negative test  
21 procedure," period, close quote.  
22 Did I read that correctly?  
23 A. Same answer.  
24 Q. And the negative pressure test procedure  
25 referred to in your E-mail to Ms. Holik is, in  
1 fact, the negative test procedure contained in the  
2 ops note sent to the rig on April 20th, 2010,  
3 which is also a part of Exhibit 97, correct?  
4 A. Same answer.  
5 Q. Had the negative pressure test been  
6 performed correctly and identified that, in fact,

7 hydrocarbons were flowing into the well on  
8 April 20th, 2010, the DEEPWATER HORIZON blowout  
9 never would have occurred, correctly?

Page 101:11 to 101:17

11 A. Same answer.  
12 Q. (BY MR. UNDERHILL) Or at least the rig  
13 crew, including but not limited to its well site  
14 leaders, would have been aware that the well did  
15 not have integrity such that they then could have  
16 taken remedial actions to prevent a blowout,  
17 correct?

Page 101:19 to 102:09

19 A. Same answer.  
20 Q. (BY MR. UNDERHILL) And, in fact, they  
21 interpreted the negative pretest -- negative  
22 pressure test as being, quote, "successful," close  
23 quote, correct?  
24 A. Same answer.  
25 Q. And, in fact, it was not successful,  
1 correct?  
2 A. Same answer.  
3 Q. And, in fact, the failure to interpret and  
4 conduct a test properly led directly to the  
5 DEEPWATER HORIZON blowout, correct?  
6 MR. MORRISS: Form.  
7 A. Same answer.  
8 Q. (BY MR. UNDERHILL) It also led to the --  
9 in turn, the Gulf oil spill, correct?

Page 102:11 to 102:13

11 A. Same answer.  
12 Q. (BY MR. UNDERHILL) Also led directly to  
13 the 11 deaths aboard the rig, correct?

Page 102:15 to 102:20

15 A. Same answer.  
16 Q. (BY MR. UNDERHILL) And again, that  
17 negative pressure test that was sent to the rig  
18 and performed by the rig was a negative pressure  
19 test that violated the MMS permit, which is

20 exemplified in Exhibit 570, correct?

Page 102:22 to 103:22

22 A. Same answer.

23 Q. (BY MR. UNDERHILL) When you worked on the  
24 Macondo Well and performed your job duties with  
25 respect to same, you were aware of the contents of  
1 Subpart D of the MMS regulations pertaining to the  
2 drilling operations, correct?

3 A. Same answer.

4 Q. You knew that the regulations prohibited  
5 drilling without a safe drilling margin, as  
6 identified in the approved APD for the Macondo  
7 Well, correct?

8 A. Same answer.

9 Q. You also understood that, in the case of  
10 the Macondo Well, BP was required to maintain a  
11 safe margin between its mud weight and its  
12 fracture gradient, correct?

13 A. Same answer.

14 Q. You knew that in connection with the  
15 Macondo Well, BP included plots in its drilling  
16 permit applications to MMS, correct?

17 A. Same answer.

18 Q. You knew that when BP included dotted  
19 lines in these plots to the right of its pore  
20 pressure and to the left of its fracture gradient,  
21 that meant BP would not drill with the mud weight  
22 outside those dotted lines, correct?

Page 103:24 to 104:07

24 A. Same answer.

25 Q. (BY MR. UNDERHILL) You knew that when BP  
1 submitted a worksheet in its permit applications  
2 listing mud weights and fracture gradients for  
3 intervals that had not yet been drilled, that  
4 meant that BP would not drill an interval with a  
5 drilling margin less than the difference between  
6 the mud weight for that interval and the fracture  
7 gradient at the previous shoe, correct?

Page 104:09 to 104:12

9 A. Same answer.

10 Q. (BY MR. UNDERHILL) You also knew that MMS  
11 relied upon BP to report accurate and reliable  
12 figures in its APDs, correct?

Page 104:14 to 104:22

14 A. Same answer.  
15 Q. (BY MR. UNDERHILL) You knew that when BP  
16 filed its October 29th, 2009, application for  
17 revised new well for the Macondo Well, it was  
18 responsible for disclosing to the permit  
19 regulators the actual LOT and pore pressure scores  
20 it recorded when it set the casing shoe at the  
21 depth of roughly 8,000 feet earlier in October of  
22 that year, correct?

Page 104:24 to 105:03

24 A. Same answer.  
25 Q. (BY MR. UNDERHILL) You knew that at that  
1 depth, the surface mud weight equivalent of the  
2 fracture gradient was no more than 10.3 pounds per  
3 gallon, correct?

Page 105:05 to 105:09

5 A. Same answer.  
6 Q. (BY MR. UNDERHILL) You also knew that, in  
7 order to make the Macondo Well's drilling margin  
8 look as large as possible, BP filed an old plot  
9 that dated back to May 11th, 2009, correct?

Page 105:11 to 105:14

11 A. Same answer.  
12 Q. (BY MR. UNDERHILL) This plot recorded the  
13 fracture gradient at the 8,000 foot casing shoe as  
14 11.1 pounds per gallon, correct?

Page 105:16 to 105:21

16 A. Same answer.  
17 Q. (BY MR. UNDERHILL) You knew that, when,  
18 in October 2009, BP drilled farther down the  
19 Macondo after it took a kick at 80 -- strike  
20 that -- at 8,970 feet, it did so without the

21 required kick margin, correct?

Page 105:23 to 106:03

23 A. Same answer.

24 Q. (BY MR. UNDERHILL) You knew that whenever  
25 BP drills a casing interval, its kick margin is  
1 required to be determined by comparing its current  
2 mud weight with the formation integrity test score  
3 at the previous casing shoe, correct?

Page 106:05 to 106:11

5 A. Same answer.

6 Q. (BY MR. UNDERHILL) You knew that when BP  
7 drilled ahead at 8,970 feet after it took the  
8 kick, it was drilling with a surface mud weight of  
9 10.1 pounds per gallon and a surface fracture  
10 gradient at the interval of less than 10.3 ppg,  
11 correct?

Page 106:13 to 106:20

13 A. Same answer.

14 Q. (BY MR. UNDERHILL) You knew that when BP  
15 set its 13 and five-eighths shoe casing -- casing  
16 shoe in around March 22nd of 2010 at roughly  
17 13,145 feet, its fracture gradient experts who  
18 were working on the Macondo Well did not trust the  
19 formation integrity test of 14.6 pounds per  
20 gallon, correct?

Page 106:22 to 107:01

22 A. Same answer.

23 Q. (BY MR. UNDERHILL) You also knew that  
24 they -- that is, BP's internal experts -- thought  
25 that result was excessive and not reliable as a  
1 formation integrity tool, correct?

Page 107:03 to 107:08

3 A. Same answer.

4 Q. (BY MR. UNDERHILL) You discussed doing an  
5 open hole leak-off test to obtain an accurate  
6 fracture gradient measurement, but decided against

7 it because you did not want to risk getting a  
8 lower fracture gradient value, correct?

Page 107:10 to 107:20

10 A. Same answer.  
11 Q. (BY MR. UNDERHILL) You knew that on  
12 April 2, 2010, BP set its 9 and seven-eighths shoe  
13 casing at the depth of roughly 17,168 feet,  
14 correct?  
15 A. Same answer.  
16 Q. (BY MR. UNDERHILL) You knew that  
17 according to BP's Macondo team, the formation  
18 integrity test result recorded -- 16 pounds per  
19 gallon -- was, in fact, much higher than expected,  
20 correct?

Page 107:22 to 107:25

22 A. Same answer.  
23 Q. (BY MR. UNDERHILL) You knew that BP's  
24 Macondo team had no confidence in this result even  
25 on the date the test was taken, correct?

Page 108:02 to 108:06

2 A. Same answer.  
3 Q. (BY MR. UNDERHILL) You also knew that one  
4 possible explanation that was discussed at the  
5 time was that BP had been testing casing or cement  
6 rather than the formation, correct?

Page 108:08 to 108:11

8 A. Same answer.  
9 Q. (BY MR. UNDERHILL) You also knew that  
10 BP's purported 16-pound fracture gradient test  
11 result was not valid, correct?

Page 108:13 to 108:17

13 A. Same answer.  
14 Q. (BY MR. UNDERHILL) You knew that BP  
15 failed to conduct a formation integrity test for  
16 its 9 7/8 casing shoe or the subsequent casing  
17 interval in which it ever had confidence, correct?

Page 108:19 to 108:23

19           A.    Same answer.  
20           Q.    (BY MR. UNDERHILL)  You, nevertheless,  
21   reported the 16-pound fracture gradient result to  
22   MMS in your mid-April drilling permit application,  
23   correct?

Page 108:25 to 109:04

25           A.    Same answer.  
1           Q.    (BY MR. UNDERHILL)  You knew that at  
2   18,260 feet, the well suffered a total loss of  
3   returns, correct?  
4           A.    Same answer.

Page 109:06 to 109:09

6           Q.    (BY MR. UNDERHILL)  You also knew that it  
7   again lost returns at that depth when the well was  
8   static and had a downhole mud weight of  
9   approximately 14.5 pounds per gallon, correct?

Page 109:11 to 109:16

11           A.    Same answer.  
12           Q.    (BY MR. UNDERHILL)  You knew that from  
13   that point on, the Macondo engineers assumed that  
14   the most reliable estimate of the downhole  
15   fracture gradient at 18,260 feet was approximately  
16   14.5 pounds per gallon, correct?

Page 109:18 to 109:22

18           A.    Same answer.  
19           Q.    (BY MR. UNDERHILL)  You also knew that at  
20   that point, the most reliable estimate of the  
21   downhole pore pressure was, in fact, 14.2 pounds  
22   per gallon, correct?

Page 109:24 to 110:08

24           A.    Same answer.  
25           Q.    (BY MR. UNDERHILL)  During the cement job  
1   for the production casing, you were aware that

2 certain traditional, quote, "best and safest,"  
3 close quote, cementing practices were not being  
4 used because BP was concerned that it could not  
5 increase the weight at the bottom of its hole on  
6 Macondo when it is circulating mud or cement to a  
7 normal amount above its static downhole mud  
8 weight, correct?

Page 110:11 to 110:23

11 A. Same answer.

12 Q. (BY MR. UNDERHILL) You knew that BP's  
13 engineering team's concern about fracturing the  
14 Macondo Well's formation caused it to use a  
15 variety of techniques in an effort to minimize ECD  
16 during the cementing of the production casing,  
17 correct?

18 A. Same answer.

19 Q. You knew that the engineering team used a  
20 pump rate of 4 barrels per minute for the  
21 cementing of the production casing on the Macondo  
22 Well in an effort to minimize ECD, correct?

23 A. Same answer.

Page 110:25 to 111:04

25 Q. (BY MR. UNDERHILL) And you were also  
1 aware that BP originally planned to circulate  
2 drilling fluid at a flow rate of at least 5 to 8  
3 barrels per minute while attempting to convert the  
4 float collar on the Macondo Well, correct?

Page 111:06 to 111:13

6 A. Same answer.

7 Q. (BY MR. UNDERHILL) You were also aware  
8 that the BP engineering team eventually decided to  
9 use a flow rate of only 1 to 2 barrels per minute  
10 during the float collar conversion because of a  
11 concern that a greater flow rate would raise ECD  
12 to a level that might fracture the wellbore,  
13 correct?

Page 111:15 to 111:21

15 A. Same answer.

16 Q. (BY MR. UNDERHILL) You understood that  
17 the flow rate during float collar conversion did  
18 not reach the minimum flow rate to achieve float  
19 collar conversion, according to the manufacturer,  
20 Weatherford's, specification. Weatherford being  
21 the manufacturer of the float collar. Correct?

Page 111:23 to 112:03

23 A. Same answer.  
24 Q. (BY MR. UNDERHILL) You were also aware  
25 that the BP engineering team reduced the volume of  
1 cement for the cementing to the production casing  
2 in the Macondo Well in an effort to lower ECD,  
3 correct?

Page 112:05 to 112:10

5 A. Same answer.  
6 Q. (BY MR. UNDERHILL) You knew that BP  
7 deviated from its original drilling program when  
8 it decided not to run a full bottoms-up  
9 circulation of drilling mud prior to cementing the  
10 production casing of the Macondo Well, correct?

Page 112:12 to 112:23

12 A. Same answer.  
13 Q. (BY MR. UNDERHILL) You knew that BP  
14 decided not to run a full bottoms-up prior to  
15 cementing the production casing in the Macondo  
16 Well because of a concern that doing so could  
17 fracture the formation, correct?  
18 A. Same answer.  
19 Q. And, in fact, you were aware that the  
20 formation was fractured, therefore allowing  
21 hydrocarbons to flow up into the casing, through  
22 and up the riser and onto the rig floor, causing  
23 the blowout, correct?

Page 112:25 to 113:05

25 A. Same answer.  
1 Q. (BY MR. UNDERHILL) You also knew that the  
2 engineering team did not consider reducing the mud  
3 weight as a way to lower ECD during the cement job

4 because doing so would increase the likelihood of  
5 a kick, correct?

Page 113:07 to 113:15

7 A. Same answer.  
8 Q. (BY MR. UNDERHILL) You also knew that the  
9 BP engineering team decided to use a small base  
10 oil spacer in an effort to reduce ECD, correct?  
11 A. Same answer.  
12 Q. You also knew that the BP engineering team  
13 decided to use foam cement on the production  
14 casing at the Macondo Well to minimize ECD,  
15 correct?

Page 113:17 to 113:17

17 A. Same answer.

Page 114:07 to 118:07

7 E X A M I N A T I O N  
8 BY MR. HYMEL:  
9 Q. Mr. Morel, as I introduced myself before  
10 the tape started, my name is Richard Hymel, and I  
11 represent TransOcean.  
12 One of your responsibilities on the  
13 Macondo Well was to make sure the well was safe;  
14 isn't that correct?  
15 A. Same answer.  
16 BY MR. MORRISS: Form.  
17 Q. (BY MR. HYMEL) And part of your job was  
18 to assess the risks of the Macondo Well?  
19 A. Same answer.  
20 Q. You called John Guide numerous times  
21 during the drilling of the Macondo Well trying to  
22 make sense of the insanity; isn't that correct?  
23 MR. MORRISS: Form.  
24 A. Same answer.  
25 Q. (BY MR. HYMEL) You called John Guide and  
1 asked his advice about exploring opportunities  
2 both inside and outside of BP, correct?  
3 MR. MORRISS: Form.  
4 A. Same answer.  
5 Q. (BY MR. HYMEL) While you were designing  
6 and drilling the Macondo Well, you were looking

7 for other jobs outside of BP; isn't that correct?

8 MR. MORRISS: Form.

9 A. Same answer.

10 Q. (BY MR. HYMEL) I want to turn to the  
11 Temporary Abandonment Procedure. Mr. Underhill  
12 asked you some questions about that, but I want to  
13 follow up on that.

14 The first Temporary Abandonment  
15 Procedure that you sent to the rig was on  
16 April 12th of 2010, correct?

17 A. Same answer.

18 Q. You followed up that Temporary Abandonment  
19 Procedure with another aban -- Temporary  
20 Abandonment Procedure on April 14th of 2010; is  
21 that correct?

22 A. Same answer.

23 Q. Then on April 16th, the Temporary  
24 Abandonment Procedure that Mr. Underhill referred  
25 to as Exhibit 570 was sent to the rig, correct?

1 A. Same answer.

2 Q. And then on April 20th, the Temporary  
3 Abandonment Procedure was sent to the rig that  
4 Mr. Underhill referred to as Exhibit 97, correct?

5 A. Same answer.

6 Q. Now, you agree with me that each of those  
7 temporary abandonment procedures was different  
8 from the previous one? You agree?

9 MR. MORRISS: Form.

10 A. Same answer.

11 Q. (BY MR. HYMEL) Isn't it true that  
12 Mr. Kaluza called you to advise that the  
13 April 20th Temporary Abandonment Procedure  
14 deviated from the procedure approved by the MMS,  
15 and you replied that the team approved to deviate  
16 from the TA procedure approved by the MMS?

17 MR. MORRISS: Form.

18 A. Same answer.

19 Q. (BY MR. HYMEL) You did not notify the MMS  
20 that the Temporary Abandonment Procedure used on  
21 April 20th, 2010, deviated from the Temporary  
22 Abandonment Procedure approved by the MMS, didn't  
23 you?

24 MR. MORRISS: Form.

25 A. Same answer.

1 Q. (BY MR. HYMEL) You did not tell  
2 TransOcean that the Transo -- the Temporary

3 Abandonment Procedure used on April 20th, 2010,  
4 deviated from the Temporary Abandonment Procedure  
5 approved by the MMS, did you?

6 MR. MORRISS: Form.

7 A. Same answer.

8 Q. (BY MR. HYMEL) One of the temporary  
9 abandonment procedures required that the mud in  
10 the -- in the well be displaced to 3300 feet below  
11 the mud line. Did you ever determine whether  
12 there was actually any need to displace the mud  
13 that far down?

14 MR. MORRISS: Form.

15 A. Same answer.

16 Q. (BY MR. HYMEL) Did you do any  
17 calculations to determine if there was any need to  
18 displace the mud in the well down to 3300 feet  
19 below the mud line?

20 A. Same answer.

21 Q. Did you ask any of the engineers on your  
22 team if there was any reason to displace the mud  
23 in the well to 3300 feet below the mud line?

24 A. Same answer.

25 Q. Did you ever calculate the amount of  
1 stress that would be put on the downhole cement  
2 job if you displaced the mud in the well down to  
3 3300 feet below the mud line?

4 A. Same answer.

5 Q. Did BP perform any formal risk assessments  
6 on the changes in the different temporary  
7 abandonment procedures?

Page 118:09 to 118:12

9 A. Same answer.

10 Q. (BY MR. HYMEL) Did BP perform any  
11 Management of Change procedures on the different  
12 temporary abandonment procedures?

Page 118:14 to 118:18

14 A. Same answer.

15 Q. (BY MR. HYMEL) Mr. Underhill asked you  
16 some questions about the bottoms-up procedure; and  
17 you were concerned that doing a bottoms-up would  
18 have taken an additional 10 to 12 hours, correct?

Page 118:20 to 118:23

20 A. Same answer.

21 Q. (BY MR. HYMEL) You knew that reducing the  
22 volume and rate of mud circulation increased the  
23 risk of contamination of the cement; do you agree?

Page 118:25 to 119:04

25 A. Same answer.

1 Q. (BY MR. HYMEL) And you knew that  
2 increasing the risk of contamination increased the  
3 risk that the bottom hole cement job would fail,  
4 didn't you?

Page 119:06 to 119:09

6 A. Same answer.

7 Q. (BY MR. HYMEL) BP did not perform any  
8 formal risk assessment on the decision to not  
9 perform a bottoms-up at a low rate, correct?

Page 119:11 to 120:11

11 A. Same answer.

12 Q. (BY MR. HYMEL) Did BP perform a  
13 Management of Change procedure on the decision to  
14 not perform a full bottoms-up at a low rate?

15 A. Same answer.

16 Q. Did TransOcean play any part in the  
17 decision not to run a bottoms-up?

18 A. Same answer.

19 Q. The cement job has been discussed  
20 previously, but I want to focus on landing the  
21 bottom plug. And you knew that the bottom plug  
22 landed nine barrels ahead of plan, correct?

23 MR. MORRISS: Form.

24 A. Same answer.

25 Q. (BY MR. HYMEL) And when the bottom plug  
1 landed nine barrels ahead of plan, that meant that  
2 the bottom plug probably bypassed the mud on the  
3 way down and the mud contaminated the cement. Do  
4 you agree?

5 MR. MORRISS: Form.

6 A. Same answer.

7 Q. (BY MR. HYMEL) Did you do anything to

8 investigate why the bottom plug landed nine  
9 barrels ahead of plan?  
10 MR. MORRISS: Form.  
11 A. Same answer.

Page 121:06 to 121:09

6 Q. (BY MR. HYMEL) You never told anyone at  
7 TransOcean that the only stability test you ever  
8 got from Mr. Gagliano showed that the cement was  
9 unstable, did you?

Page 121:12 to 121:15

12 A. Same answer.  
13 Q. (BY MR. HYMEL) You never told anyone at  
14 TransOcean that you never got a good stability  
15 test for the cement, did you?

Page 121:18 to 121:18

18 A. Same answer.

Page 121:25 to 122:04

25 Q. (BY MR. HYMEL) You understood at that  
1 time, on April -- in April of 2010, that the only  
2 proven technique for deciding whether you had a  
3 good cement job was to run a cement bond log,  
4 correct?

Page 122:06 to 122:09

6 A. Same answer.  
7 Q. (BY MR. HYMEL) And BP's ETP GP 1060  
8 required you to run a bond log on the production  
9 casing, didn't it?

Page 122:11 to 122:19

11 A. Same answer.  
12 Q. (BY MR. HYMEL) You understood that  
13 because you went with the long string, you needed  
14 to fix any problems with the cement before the  
15 temporary abandonment, correct?  
16 A. Same answer.

17 Q. And the only proven method for detecting  
18 problems with the cement was to run a cement bond  
19 log, correct?

Page 122:21 to 123:02

21 A. Same answer.  
22 Q. (BY MR. HYMEL) BP decided not to run a  
23 cement bond log even though you knew that going  
24 with the long string made it particularly  
25 important to detect any problems with the cement  
1 job before displacing the well; isn't that  
2 correct?

Page 123:04 to 123:04

4 A. Same answer.

Page 123:09 to 123:11

9 Q. You agree that it was BP's responsibility  
10 to determine how the negative tests would be  
11 conducted?

Page 123:13 to 123:16

13 A. Same answer.  
14 Q. (BY MR. HYMEL) And the onshore BP  
15 engineering team delegated that responsibility to  
16 you, didn't they?

Page 123:18 to 123:24

18 A. Same answer.  
19 Q. (BY MR. HYMEL) Had you ever prepared a  
20 negative test procedure before?  
21 A. Same answer.  
22 Q. Do you deny that you asked the well site  
23 leader and the mud engineer for advice on how to  
24 prepare the negative pressure test procedure?

Page 124:01 to 124:04

1 A. Same answer.  
2 Q. (BY MR. HYMEL) You understood that this  
3 was BP's responsibility to decide whether the

4 negative pressure test was a success?

Page 124:06 to 124:10

6 A. Same answer.

7 Q. (BY MR. HYMEL) You understood that it was  
8 BP's responsibility to determine whether it was  
9 safe to move on after the test to the displacement  
10 of the riser; isn't that correct?

Page 124:12 to 125:11

12 A. Same answer.

13 Q. (BY MR. HYMEL) But you left the rig  
14 before the negative pressure test even started,  
15 correct?

16 A. Same answer.

17 Q. Do you agree that the April 20th, 2010,  
18 Temporary Abandonment Procedure that you sent to  
19 the rig did not provide specifics on how to  
20 perform the negative pressure test?

21 A. Same answer.

22 Q. Do you agree that the April 20th, 2010,  
23 Temporary Abandonment Procedure did not specify  
24 how the negative pressure test should be set up?

25 A. Same answer.

1 Q. Do you agree that the April 20th, 2010,  
2 Temporary Abandonment Procedure did not specify  
3 calculated bleed back volumes?

4 A. Same answer.

5 Q. Do you agree that the April 20th, 2010,  
6 Temporary Abandonment Procedure did not provide  
7 success or failure criteria?

8 A. Same answer.

9 Q. BP also chose to use an abnormally --  
10 abnormally large volume of spacer during the  
11 negative pressure test, correct?

Page 125:14 to 125:17

14 A. Same answer.

15 Q. (BY MR. HYMEL) Typically, BP uses around  
16 180 to 200 barrels of spacer during a negative  
17 pressure test, correct?

Page 125:20 to 125:23

20 A. Same answer.

21 Q. (BY MR. HYMEL) In this instance, on  
22 April 20th, 2010, the plan that you sent to the  
23 rig called for 450 barrels of spacer, correct?

Page 126:01 to 126:08

1 A. Same answer.

2 Q. (BY MR. HYMEL) By choosing the heavy  
3 spacer, BP increased the risk that the spacer  
4 would fall downward through the lighter seawater  
5 during displacement and potentially end up beneath  
6 the BOP when the lower annular was closed for the  
7 negative pressure test, correct?

8 A. Same answer.

Page 126:11 to 126:13

11 Q. (BY MR. HYMEL) Do you agree that the  
12 spacer below the annular could cause problems with  
13 the negative pressure test?

Page 126:16 to 126:20

16 A. Same answer.

17 Q. (BY MR. HYMEL) Do you agree that BP was  
18 warned in advance that the spacer could cause  
19 some of -- some of the spacer to congeal in small  
20 restrictions and tools in the drill pipe?

Page 126:23 to 126:25

23 A. Same answer.

24 Q. (BY MR. HYMEL) BP chose to use the spacer  
25 to save time and money, correct?

Page 127:02 to 127:10

2 A. Same answer.

3 Q. (BY MR. HYMEL) The surface cement plug  
4 was set 3300 feet below the mud line so that  
5 weight could be hung below the lockdown sleeve to  
6 help set the lockdown sleeve; isn't that correct?

7 A. Same answer.

8 Q. Isn't it true that heavyweight drill pipe

9 could have been used so the surface cement plug  
10 did not have to be set so far below the mud line?

Page 127:12 to 127:16

12 A. Same answer.  
13 Q. (BY MR. HYMEL) Isn't it true that weight  
14 could have also been placed above the lockdown  
15 sleeve so that the surface plug did not have to be  
16 set so far below the mud line?

Page 127:18 to 128:07

18 A. Same answer.  
19 Q. (BY MR. HYMEL) Isn't it true that if you  
20 needed more time to figure out the temporary  
21 abandonment procedures or the cementing issues,  
22 that you could have taken that time?  
23 A. Same answer.  
24 Q. On April 13th, the onshore engineering  
25 team actually considered simply plugging the open  
1 hole and temporarily abandoning the well, correct?  
2 A. Same answer.  
3 Q. The onshore engineering -- strike that.  
4 The onshore engineering team decided  
5 against temporarily abandoning the well because it  
6 would have cost BP an additional 10- to \$15  
7 million to return to the well; do you agree?

Page 128:09 to 128:09

9 A. Same answer.

Page 129:10 to 129:13

10 Q. (BY MR. HYMEL) And you would want the rig  
11 crew to have all the information related to safety  
12 concerns with displacing and the negative test.  
13 You agree?

Page 129:15 to 129:19

15 A. Same answer.  
16 Q. (BY MR. HYMEL) You agree that BP should  
17 have told the TransOcean crew that Halliburton  
18 recommended 21 centralizers on the production

19 casing but BP decided to use only 6 centralizers?

Page 129:21 to 130:01

21 A. Same answer.

22 Q. (BY MR. HYMEL) You agree that BP should  
23 have told the TransOcean crew that the April 18th  
24 OptiCem report prepared by Halliburton predicted a  
25 severe gas flow problem if seven or fewer  
1 centralizers were used on the production casing?

Page 130:03 to 130:08

3 A. Same answer.

4 Q. (BY MR. HYMEL) You agree that BP should  
5 have told the TransOcean crew that Weatherford  
6 recommended circulating at 5 barrels per minute to  
7 7 barrels per minute to convert the float collar,  
8 but BP chose not to circulate at those rates.

Page 130:10 to 130:14

10 A. Same answer.

11 Q. (BY MR. HYMEL) Do you agree that BP  
12 should have told the TransOcean crew that  
13 questions existed regarding whether the float  
14 collar converted?

Page 130:16 to 130:19

16 A. Same answer.

17 Q. (BY MR. HYMEL) Do you agree that BP  
18 should have told the TransOcean crew that it did  
19 not perform a full bottoms-up?

Page 130:21 to 130:25

21 A. Same answer.

22 Q. (BY MR. HYMEL) Do you agree that BP  
23 should have told the TransOcean crew that the  
24 circulation pressure at the shearing out the float  
25 collars was lower than modeled?

Page 131:02 to 131:06

2 A. Same answer.

3 Q. (BY MR. HYMEL) Do you agree that BP  
4 should have told the TransOcean crew that BP  
5 performed the cement job on the production casing  
6 without getting complete lab tests on the cement?

Page 131:08 to 131:13

8 A. Same answer.  
9 Q. (BY MR. HYMEL) Do you agree that BP  
10 should have told the TransOcean crew that the  
11 limited volume of cement used for the production  
12 casing and the low rate at which that cement was  
13 pumped increased the risk of cement failure?

Page 131:15 to 131:18

15 A. Same answer.  
16 Q. (BY MR. HYMEL) Do you agree that BP  
17 should have told the TransOcean crew that it was  
18 using lost control material as a spacer?

Page 131:20 to 131:24

20 A. Same answer.  
21 Q. (BY MR. HYMEL) Do you agree that there  
22 was worry on the rig about the next operation,  
23 which was the P&I at the Nile Well -- P&A at the  
24 Nile Well?

Page 132:01 to 134:19

1 A. Same answer.  
2 Q. (BY MR. HYMEL) Do you deny that you sent  
3 an E-mail to Richard Miller on April 15 asking him  
4 to review the possibility of using a production  
5 liner on Macondo instead of the planned long  
6 string?  
7 A. Same answer.  
8 Q. Do you deny that you apologized to  
9 Mr. Miller for asking him to consider design  
10 changes at the last minute?  
11 A. Same answer.  
12 Q. Do you deny that you told Mr. Miller that  
13 Macondo was a nightmare well?  
14 A. Same answer.  
15 Q. Do you deny that Mr. Miller told you that

16 he got nervous because BP had flipped the design  
17 parameters around so much?

18 MR. MORRISS: Form.

19 A. Same answer.

20 Q. (BY MR. HYMEL) Do you agree that BP was  
21 flipping the design parameters around?

22 MR. MORRISS: Form.

23 A. Same answer.

24 Q. (BY MR. HYMEL) On April 14th, the onshore  
25 engineering team met to discuss whether to use a  
1 long string or a liner for the final production  
2 casing; isn't that correct?

3 A. Same answer.

4 Q. And you were at that meeting?

5 A. Same answer.

6 Q. And at this meeting on April 14th, one  
7 week before the blowout, the onshore engineering  
8 team agreed to recommend a liner instead of a long  
9 string, correct?

10 MR. MORRISS: Form.

11 A. Same answer.

12 Q. (BY MR. HYMEL) The original plan for the  
13 well had called for a long string for the final  
14 production casing; isn't that correct?

15 A. Same answer.

16 Q. You understood that changing to a liner  
17 would add another 7- to \$10 million to the cost of  
18 the well; is that correct?

19 MR. MORRISS: Form.

20 A. Same answer.

21 Q. (BY MR. HYMEL) But you thought that an  
22 extra 7- to \$10 million was worth it because the  
23 liner was a safer option than the long string;  
24 isn't that correct?

25 A. Same answer.

1 MR. MORRISS: Form.

2 Q. (BY MR. HYMEL) You thought that with the  
3 liner, BP was more likely to get a good cement  
4 job?

5 MR. MORRISS: Form.

6 A. Same answer.

7 Q. (BY MR. HYMEL) And you thought that BP  
8 was less likely to get a good cement job with the  
9 long string; isn't that correct?

10 MR. MORRISS: Form.

11 A. Same answer.

12 Q. (BY MR. HYMEL) The BP Onshore Engineering  
13 Team subsequently decided to change the  
14 recommendation and go back to the long string,  
15 correct?

16 A. Same answer.

17 Q. You understood, didn't you, that going  
18 with the long string increased the risk of cement  
19 failure?

Page 134:21 to 134:25

21 A. Same answer.

22 Q. (BY MR. HYMEL) Although you changed your  
23 recommendations, you made it clear to your  
24 supervisor, Mr. Sims, that there were risks in  
25 going with the liner, didn't you?

Page 135:02 to 135:07

2 A. Same answer.

3 Q. (BY MR. HYMEL) Strike that question.  
4 Although you changed your  
5 recommendations, you made it clear to your  
6 supervisor, Mr. Sims, that there were risks in  
7 going with the long string, correct?

Page 135:09 to 135:17

9 A. Same answer.

10 Q. (BY MR. HYMEL) And, In fact, the team  
11 prepared another set of PowerPoint slides that  
12 went over the risks that were associated with the  
13 long string, correct?

14 A. Same answer.

15 Q. You wanted to make sure that Mr. Sims  
16 understood that there were risks with going with  
17 the long string; do you agree?

Page 135:19 to 136:08

19 A. Same answer.

20 Q. (BY MR. HYMEL) And you told Mr. Sims that  
21 with the long string, BP was less likely to get a  
22 good cement job; isn't that correct?

23 MR. MORRISS: Form.

24 A. Same answer.

25 Q. (BY MR. HYMEL) You told Mr. Sims that the  
1 long string was still not as safe as the liner,  
2 didn't you?

3 MR. MORRISS: Form.

4 A. Same answer.

5 Q. (BY MR. HYMEL) And you understood that BP  
6 was prepared to accept the risks of going with the  
7 long string in order to save 7- to \$10 million,  
8 correct?

Page 136:10 to 136:14

10 A. Same answer.

11 Q. (BY MR. HYMEL) You concluded that if BP  
12 went with the long string instead of the liner, it  
13 would be hard for BP to justify deferring fixing  
14 any problems with the cement, correct?

Page 136:16 to 136:22

16 A. Same answer.

17 Q. (BY MR. HYMEL) You believed at that time  
18 that if BP went with the long string, that BP  
19 would have to do a remediation on the cement job,  
20 if necessary, before the Temporary Abandonment  
21 Procedure, correct?

22 A. Same answer.

Page 138:24 to 139:05

24 Q. (BY MR. HYMEL) BP initially ordered six  
25 centralizer subs for use with the -- the  
1 production casing, correct?

2 A. Same answer.

3 Q. And you're aware that Mr. Walz asked  
4 Mr. Coteles to get 15 more centralizers to be sent  
5 to the rig, correct?

Page 139:07 to 139:10

7 A. Same answer.

8 Q. (BY MR. HYMEL) And Mr. Guide decided that  
9 he did not want to use the additional  
10 centralizers, correct?

Page 139:12 to 139:21

12 A. Same answer.

13 Q. (BY MR. HYMEL) If Mr. Guide didn't like  
14 the centralizers that were sent to the rig, you  
15 could have waited for more centralizers; isn't  
16 that correct?

17 MR. MORRISS: Form.

18 A. Same answer.

19 Q. (BY MR. HYMEL) And one of the options  
20 discussed at that point was simply to plug the  
21 open hole; isn't that correct?

Page 139:23 to 140:02

23 A. Same answer.

24 Q. (BY MR. HYMEL) Now, you were the person  
25 at BP who decided where the six centralizers would  
1 actually go on the drill -- on the production  
2 casing, correct?

Page 140:04 to 140:12

4 A. Same answer.

5 Q. (BY MR. HYMEL) You understood that it was  
6 important not only to get the right number of  
7 centralizers, but to put them in the right  
8 locations, correct?

9 A. Same answer.

10 Q. In fact, you knew that poor casing  
11 centralization could result in an inadequate  
12 cement job; isn't that correct?

Page 140:14 to 141:04

14 A. Same answer.

15 Q. (BY MR. HYMEL) You knew that API  
16 Recommended Practice 65 states that computer  
17 simulations using accurate well and fluid data  
18 should be used to determine centralizer placement,  
19 didn't you?

20 A. Same answer.

21 Q. You're aware that BP's own policies  
22 recommended running multiple computer simulations  
23 to determine the sensitivity of the well design to  
24 hole size, excess cement volume and channelling,  
25 correct?

1           A. Same answer.  
2           Q. But you didn't run any cement -- any  
3 computer simulations to determine the centralizer  
4 placement, correct?

Page 141:06 to 141:09

6           A. Same answer.  
7           Q. (BY MR. HYMEL) You didn't comply with the  
8 API recommended practices to determine centralizer  
9 placement with computer simulations, correct?

Page 141:11 to 141:15

11          A. Same answer.  
12          Q. (BY MR. HYMEL) You did not comply with  
13 BP's recommendation that you run multiple computer  
14 simulations to determine the centralizer  
15 placement, correct?

Page 141:17 to 141:20

17          A. Same answer.  
18          Q. (BY MR. HYMEL) You didn't follow the  
19 recommendations from the OptiCem modeling,  
20 correct?

Page 141:22 to 142:04

22          A. Same answer.  
23          Q. (BY MR. HYMEL) In fact, after your first  
24 placement, you decided that was not the best  
25 placement, so you did another placement, correct?  
1           A. Same answer.  
2           Q. And after the second placement, you again  
3 thought that wasn't the best placement, so you did  
4 a third placement, correct?

Page 142:06 to 142:11

6           A. Same answer.  
7           Q. (BY MR. HYMEL) When you finally decided  
8 where you wanted to run the centralizers, you  
9 didn't ask Mr. Gagliano to run an OptiCem model to  
10 see whether your placement was appropriate, did  
11 you?

Page 142:13 to 142:18

13           A.   Same answer.  
14           Q.   (BY MR. HYMEL)  Now, the reason you only  
15   had six centralizers -- six centralizer subs on  
16   the rig to work with is because you waited until  
17   the last minute to actually order the  
18   centralizers; isn't that correct?

Page 142:20 to 142:23

20           A.   Same answer.  
21           Q.   (BY MR. HYMEL)  And when you ordered the  
22   centralizers on March 31st, Weatherford only had  
23   six centralizer subs, correct?

Page 142:25 to 143:06

25           A.   Same answer.  
1           Q.   (BY MR. HYMEL)  And you took the six  
2   centralizer subs that Weatherford had on hand;  
3   isn't that correct?  
4           A.   Same answer.  
5           Q.   Now, you agree that you could have asked  
6   Weatherford to manufacture more centralizer subs?

Page 143:08 to 143:12

8           A.   Same answer.  
9           Q.   (BY MR. HYMEL)  Isn't it true that  
10   Weatherford offered to manufacture more  
11   centralizer subs within ten days, if you needed  
12   those?

Page 143:14 to 143:19

14           A.   Same answer.  
15           Q.   (BY MR. HYMEL)  If you had asked  
16   Weatherford on March 31st to manufacture  
17   additional centralizer subs, those centralizer  
18   subs could have been manufactured before the  
19   production casing was run; isn't that correct?

Page 143:21 to 143:25

21           A.    Same answer.  
22           Q.    (BY MR. HYMEL)  Later, when BP decided to  
23    use 21 centralizers, BP asked Weatherford to send  
24    15 centralizers that they had in stock, correct?  
25           A.    Same answer.

Page 144:02 to 144:04

2           Q.    (BY MR. HYMEL)  It was too late to order  
3    more centralizer subs unless you were willing to  
4    delay finishing the well; isn't that correct?

Page 144:06 to 144:08

6           A.    Same answer.  
7           Q.    (BY MR. HYMEL)  And you did not want to  
8    delay finishing the well, correct?

Page 144:10 to 144:12

10          A.    Same answer.  
11          Q.    (BY MR. HYMEL)  That delay would cost BP  
12    money, correct?

Page 144:14 to 144:17

14          A.    Same answer.  
15          Q.    (BY MR. HYMEL)  Did you perform a -- any  
16    type of formal risk assessment on using 6  
17    centralizers instead of 21 centralizers?

Page 144:19 to 144:22

19          A.    Same answer.  
20          Q.    (BY MR. HYMEL)  Did you perform any type  
21    of formal risk assessment on the placement of the  
22    centralizers?

Page 144:24 to 145:03

24          A.    Same answer.  
25          Q.    (BY MR. HYMEL)  Did you perform any MOC on  
1    using -- Management of Change on using centra --  
2    centralizers versus 21 centralizers?  
3          A.    Same answer.

Page 145:18 to 148:16

18 Q. (BY MR. HYMEL) Do you deny that BP made  
19 eight attempts to -- to convert the float collar?

20 A. Same answer.

21 Q. And you discussed with John Guide that you  
22 were having problems attempting to convert the  
23 float collar, and Mr. Guide said to increase --  
24 increase the pressure, correct?

25 A. Same answer.

1 Q. And you called Brian Clawson with  
2 Weatherford, and he told you that the ball in the  
3 autofill tube of the float collar would pass  
4 through the bottom of the auto tube without  
5 converting the floats at 1300 psi, correct?

6 MR. MORRISS: Form.

7 A. Same answer.

8 Q. (BY MR. HYMEL) Did you tell anybody that  
9 Brian Clawson with Weatherford told you that the  
10 ball in the autofill tube of the float collar  
11 would pass through the bottom of the autofill tube  
12 without converting the floats at 1300 psi?

13 A. Same answer.

14 MR. MORRISS: Form.

15 Q. (BY MR. HYMEL) Even though you had spoken  
16 to Mr. Clawson about the psi at which the ball  
17 would pass through the autofill tube of the float  
18 collar, Mr. Guide instructed you to increase the  
19 pressure up to 3,142 psi, correct?

20 MR. MORRISS: Form.

21 A. Same answer.

22 Q. (BY MR. HYMEL) And when the pressure was  
23 increased up to 3,142 psi, circulation was  
24 established, correct?

25 A. Same answer.

1 Q. And at that point, you told Mr. Clawson,  
2 "Yeah, we blew it at 3,140. Still not sure what  
3 we blew yet."

4 Correct?

5 MR. MORRISS: Form.

6 A. Same answer.

7 Q. (BY MR. HYMEL) Even after the pressure  
8 was increased to 3,142 psi and circulation was  
9 established, questions still existed regarding  
10 whether the float collar converted; isn't that  
11 correct?

12 MR. MORRISS: Form.  
13 A. Same answer.  
14 Q. (BY MR. HYMEL) And one of those questions  
15 was that Halliburton -- strike that.  
16 One of those questions was that  
17 Halliburton model, that the circulation pressure  
18 after converting the float collar should have been  
19 570 psi and 4 barrels per minute, but you observed  
20 that the circulation pressure was 350 psi at 4  
21 barrels per minute; is that correct?  
22 MR. MORRISS: Form.  
23 A. Same answer.  
24 Q. (BY MR. HYMEL) And even though the  
25 circulation pressure was lower than modeled, you  
1 did not stop the job, correct?  
2 MR. MORRISS: Form.  
3 A. Same answer.  
4 Q. (BY MR. HYMEL) Do you agree that the risk  
5 the cement job would not set properly was  
6 increased if the float collar was not properly  
7 converted?  
8 A. Same answer.  
9 Q. Are you aware that BP takes the position  
10 that the oil and gas flowed up the shoe track and  
11 up the production casing?  
12 A. Same answer.  
13 Q. Do you agree that the oil and gas could  
14 not have flowed up the shoe track and up the  
15 production casing if BP had properly converted the  
16 float collar?

Page 148:18 to 149:10

18 A. Same answer.  
19 Q. (BY MR. HYMEL) Did BP perform any formal  
20 risk assessment on increasing the pressure to  
21 attempt to convert the float collar?  
22 A. Same answer.  
23 Q. Did BP perform any formal risk assessment  
24 on the low circulation pressures?  
25 A. Same answer.  
1 Q. Did BP perform any -- a Management of  
2 Change procedure on increasing the pressure to  
3 attempt to convert the float collar?  
4 A. Same answer.  
5 Q. Did BP perform a Management of Change on

6 the low circulation pressure?  
7 A. Same answer.  
8 Q. You had concerns about a breach in the  
9 casing, didn't you?  
10 A. Same answer.

Page 149:12 to 149:15

12 Q. (BY MR. HYMEL) Even though you had  
13 concerns about a breach in the casing, you did  
14 nothing about that concern and decided to move  
15 forward with the TA procedure, correct?

Page 149:17 to 149:17

17 A. Same answer.

Page 149:25 to 150:11

25 E X A M I N A T I O N  
1 BY MR. SCHWARTZ:  
2 Q. Hi, Mr. Morel. My name is Jon-Bernard  
3 Schwartz, and I represent Halliburton. Do you  
4 understand who I am and who I represent?  
5 A. Yes.  
6 Q. I want to go back, if I could, to the  
7 design of the production casing that we've been  
8 discussing today.  
9 You have agreed and you agree now  
10 that cementing a long string is more difficult  
11 than cementing a liner?

Page 150:13 to 150:16

13 A. Same answer.  
14 Q. (BY MR. SCHWARTZ) And you also agree that  
15 it was substantially cheaper to cement the long  
16 string than the liner; isn't that correct?

Page 150:18 to 150:21

18 A. Same answer.  
19 Q. (BY MR. SCHWARTZ) And it would save --  
20 doing so, it would have saved BP -- or did save BP  
21 7- to \$10 million, right?

Page 150:23 to 151:01

23 A. Same answer.

24 Q. (BY MR. SCHWARTZ) Isn't it true that  
25 using a long string rather than a liner increases  
1 the risk of cement contamination?

Page 151:03 to 151:07

3 A. Same answer.

4 Q. (BY MR. SCHWARTZ) And -- and this risk  
5 was further increased by using a tapered long  
6 string because the wiper plugs could not wipe it  
7 properly?

Page 151:09 to 151:12

9 A. Same answer.

10 Q. (BY MR. SCHWARTZ) And using a long string  
11 did not permit moving or rotating the casing  
12 during the cement job; isn't that right?

Page 151:14 to 151:16

14 A. Same answer.

15 Q. (BY MR. SCHWARTZ) And you knew this,  
16 didn't you?

Page 151:18 to 151:21

18 A. Same answer.

19 Q. (BY MR. SCHWARTZ) And rotating the casing  
20 would have improved the likelihood of a quality  
21 cement job, wouldn't it?

Page 151:23 to 152:02

23 A. Same answer.

24 Q. (BY MR. SCHWARTZ) And cementing the long  
25 string required a higher cement pumping pressure  
1 and resulted in a higher ECD than cementing a  
2 liner?

Page 152:04 to 152:07

4 A. Same answer.

5 Q. (BY MR. SCHWARTZ) Isn't it true that if  
6 you had choose -- chosen a liner, you could have  
7 obtained a lower ECD?

Page 152:09 to 152:14

9 A. Same answer.  
10 Q. (BY MR. SCHWARTZ) And isn't it true that  
11 with a liner, you could have ignored the ECD  
12 completely because you would have had the  
13 mechanical seal as another barrier to the  
14 hydrocarbon flow?

Page 152:16 to 152:21

16 A. Same answer.  
17 Q. (BY MR. SCHWARTZ) And isn't it true that  
18 if you had chosen a liner, you would have been  
19 more prone to remediate a cement job because  
20 remediation is easier with a liner than with a  
21 long string?

Page 152:23 to 153:12

23 A. Same answer.  
24 Q. (BY MR. SCHWARTZ) During the week  
25 preceding the blowout when you were making changes  
1 to the Temporary Abandonment Procedure, you didn't  
2 consider how the risks associated with such  
3 changes would be mitigated in accordance with the  
4 risk register, did you?

5 MR. MORRISS: Form.

6 A. Same answer.  
7 Q. (BY MR. SCHWARTZ) With regards to the  
8 risk register, when BP recommended the final long  
9 string design, you knew that possible hydrocarbon  
10 zones could be left exposed in the annulus with  
11 only the casing hanger seal as a single barrier  
12 for the temporary abandonment, right?

Page 153:14 to 153:16

14 A. Same answer.  
15 Q. (BY MR. SCHWARTZ) But you did nothing to  
16 mitigate that risk?

Page 153:18 to 153:21

18 A. Same answer.

19 Q. (BY MR. SCHWARTZ) If you had chosen a  
20 liner over the long string, you wouldn't have had  
21 to have used a lower volume cement, correct?

Page 153:23 to 154:01

23 A. Same answer.

24 Q. (BY MR. SCHWARTZ) If you had chosen a  
25 liner over the long string, you wouldn't have had  
1 to use a slower pump rate; isn't that correct?

Page 154:03 to 154:07

3 A. Same answer.

4 Q. (BY MR. SCHWARTZ) If you had chosen the  
5 liner over the long string, you wouldn't have had  
6 to use nitrogen cement with reduced density; isn't  
7 that correct?

Page 154:09 to 154:13

9 A. Same answer.

10 Q. (BY MR. SCHWARTZ) In sum, BP's  
11 engineering team did not adequately consider the  
12 effect that the long string design would have on  
13 the cement job, did it?

Page 154:15 to 155:05

15 A. Same answer.

16 Q. (BY MR. SCHWARTZ) And you were part of  
17 this team, weren't you?

18 A. Same answer.

19 Q. (BY MR. SCHWARTZ) BP made -- you, on  
20 behalf of BP, made numerous cost-saving decisions  
21 that increased the chance of a blowout without  
22 running a formal risk assessment; isn't that  
23 right?

24 MR. MORRISS: Form.

25 A. Same answer.

1 Q. (BY MR. SCHWARTZ) Isn't it true that in  
2 the days preceding the blowout, many of your  
3 decisions regarding the well were affected by the

4 fact that the well was over budget?

5 A. Same answer.

Page 155:07 to 155:11

7 Q. (BY MR. SCHWARTZ) Isn't it true that in  
8 the days preceding the blowout, many of your  
9 decisions regarding the well were affected by the  
10 fact that the -- the well was over its allocated  
11 time for its completion?

Page 155:13 to 155:16

13 A. Same answer.

14 Q. (BY MR. SCHWARTZ) Because of that, in the  
15 days proceeding the blowout, didn't you, on behalf  
16 of BP, make many decisions that were cost-driven?

Page 155:18 to 155:21

18 A. Same answer.

19 Q. (BY MR. SCHWARTZ) And you did so without  
20 running any formal risk assessment; isn't that  
21 right?

Page 155:23 to 156:02

23 A. Same answer.

24 Q. (BY MR. SCHWARTZ) And you made changes in  
25 the days preceding the blowout just on an ad hoc  
1 basis?

2 A. Same answer.

Page 156:04 to 156:11

4 Q. (BY MR. SCHWARTZ) And we -- you were  
5 questioned previously about your deciding not to  
6 wait for more centralizers to be delivered to the  
7 rig, right?

8 A. Same answer.

9 Q. And that's -- not waiting for the  
10 centralizers to be delivered to the rig saved  
11 time, didn't it?

Page 156:13 to 156:15

13 A. Same answer.  
14 Q. (BY MR. SCHWARTZ) And time is money;  
15 isn't it?

Page 156:17 to 158:04

17 A. Same answer.  
18 Q. (BY MR. SCHWARTZ) I'm going to hand you,  
19 Mr. Morel, what's been previously marked as  
20 Exhibit 2041. And it's Tab 5. So, if you would  
21 look at that document.  
22 And this is an E-mail from you to  
23 Jesse Gagliano, Mark Hafle, Brett Cicales, and  
24 Greg Walz, subject: Regarding OptiCem report.  
25 And again, it's dated Thursday, April 15th. I'm  
1 going to read the text of the E-mail: "We have  
2 six centralizers. We can run them in a row,  
3 spread out, or any combinations of the two, but  
4 the vertical hole, so hopefully the pipe stays  
5 centralized due to gravity. As far as changes,  
6 it's too late to get any more product to the rig.  
7 Our only options is to rearrange placement of  
8 these centralizers. Please see attached diagram  
9 for my recommendation."  
10 Did I read that right, Mr. Morel?  
11 A. Same answer.  
12 Q. And so, you said here: "It's too late to  
13 get any more product to the rig." Isn't that  
14 right?  
15 A. Same answer.  
16 Q. The truth is, it's never too late to get  
17 any more product to the rig; isn't that right?  
18 MR. MORRISS: Form.  
19 A. Same answer.  
20 Q. (BY MR. SCHWARTZ) If you had wanted to,  
21 you could have stopped the rig completely to wait  
22 on this product getting to the rig, couldn't you?  
23 A. Same answer.  
24 Q. Anyone on the rig on BP's behalf could  
25 have done that; isn't that true?  
1 A. Same answer.  
2 Q. But the reason that you didn't wait for  
3 more product to arrive to the rig was -- was  
4 putting cost over safety; isn't that right?

Page 158:06 to 158:13

6           A. Same answer.  
7           Q. (BY MR. SCHWARTZ) And we talked about  
8 running the cement evaluation log, didn't we,  
9 today?  
10          A. Same answer.  
11          Q. And again, BP decided not to run a cement  
12 evaluation log; isn't that right?  
13          A. Same answer.

Page 158:15 to 158:16

15          Q. (BY MR. SCHWARTZ) And that decision saved  
16 BP time?

Page 158:18 to 158:20

18          A. Same answer.  
19          Q. (BY MR. SCHWARTZ) And that decision saved  
20 BP money, didn't it?

Page 158:22 to 159:05

22          A. Same answer.  
23          Q. (BY MR. SCHWARTZ) On or about April 15th,  
24 you recommended to the Macondo onshore engineers  
25 about setting a deep plug in the seawater; isn't  
1 that right?  
2          A. Same answer.  
3          Q. But you never conducted or saw to it that  
4 someone else conducted any formal risk analysis in  
5 this regard; isn't that right?

Page 159:07 to 159:09

7           A. Same answer.  
8           Q. (BY MR. SCHWARTZ) And you did that  
9 because it saved you time, right?

Page 159:11 to 159:12

11          A. Same answer.  
12          Q. (BY MR. SCHWARTZ) And it saved you money?

Page 159:14 to 159:14

14           A.    Same answer.

Page 159:18 to 159:20

18       BP decided not to perform additional  
19       tests regarding well integrity given the dubious  
20       negative test results; isn't that right?

Page 159:22 to 159:24

22           A.    Same answer.  
23           Q.    (BY MR. SCHWARTZ)   And you knew about  
24       these test results?

Page 160:01 to 160:03

1           A.    Same answer.  
2           Q.    (BY MR. SCHWARTZ)   And you did not make  
3       any recommendations to perform additional tests?

Page 160:05 to 160:08

5           A.    Same answer.  
6           Q.    (BY MR. SCHWARTZ)   Is that because it  
7       saved you guys time?  
8           A.    Same answer.

Page 160:10 to 160:11

10          Q.    (BY MR. SCHWARTZ)   And it saved you money,  
11       right?

Page 160:13 to 160:17

13           A.    Same answer.  
14           Q.    (BY MR. SCHWARTZ)   During the displacement  
15       procedure, you did not emphasize the importance of  
16       monitoring for kicks during the displacement, did  
17       you?

Page 160:19 to 160:23

19           A.    Same answer.  
20           Q.    (BY MR. SCHWARTZ)   I'd like to talk about  
21       the volume of cement that was pumped.  Isn't it  
22       true that it's better to pump more, rather than

23 less, cement into a well?

Page 160:25 to 161:04

25 A. Same answer.

1 Q. (BY MR. SCHWARTZ) And isn't it true that  
2 in this case, with regards to the production  
3 casing, that it would have been better to pump  
4 more, rather than less, cement into the well?

Page 161:06 to 161:09

6 A. Same answer.

7 Q. (BY MR. SCHWARTZ) Pumping more cement  
8 reduces the risk of contamination of cement by  
9 diluting the amount of contaminants, doesn't it?

Page 161:11 to 161:11

11 A. Same answer.

Page 161:15 to 161:20

15 Pumping more cement also reduces the  
16 impact of errors and cement placement; isn't that  
17 correct?

18 A. Same answer.

19 Q. BP made a conscious decision to pump less  
20 cement, didn't it?

Page 161:22 to 161:25

22 A. Same answer.

23 Q. (BY MR. SCHWARTZ) You recognized that  
24 this small volume of cement provided little margin  
25 for error, didn't you?

Page 162:02 to 162:06

2 A. Same answer.

3 Q. (BY MR. SCHWARTZ) Your decision and BP's  
4 decision to pump only 61 barrels of cement meant  
5 that there would be less cement above the  
6 hydrocarbon zone, right?

Page 162:08 to 162:12

8 A. Same answer.  
9 Q. (BY MR. SCHWARTZ) Displacement of the  
10 cement only 500 feet above the hydrocarbon zone  
11 violated BP's own engineering practice at BPT  
12 1060; isn't that right?

Page 162:14 to 162:20

14 A. Same answer.  
15 Q. (BY MR. SCHWARTZ) And BP's decision to  
16 use less cement also increased the risk that  
17 placement errors would leave insufficient cement  
18 in the shoe track or in the annular space  
19 corresponding to the hydrocarbon zone; isn't that  
20 right?

Page 162:22 to 162:24

22 A. Same answer.  
23 Q. (BY MR. SCHWARTZ) And you knew this at  
24 the time, didn't you?

Page 163:01 to 163:05

1 A. Same answer.  
2 Q. (BY MR. SCHWARTZ) And did -- and you knew  
3 at the time that BP's decision to use less cement  
4 also increased the chance of cement contamination;  
5 isn't that right?

Page 163:07 to 163:10

7 A. Same answer.  
8 Q. (BY MR. SCHWARTZ) And BP ignored these  
9 risks when it decided to use a low volume cement;  
10 isn't that true?

Page 163:12 to 163:15

12 A. Same answer.  
13 Q. (BY MR. SCHWARTZ) And didn't you know  
14 that BP ignored these risks when it decided to use  
15 a low volume cement?

Page 163:17 to 163:21

17           A.   Same answer.  
18           Q.   (BY MR. SCHWARTZ)  You would agree with me  
19   that BP's decision to use lower -- a lower pump  
20   rate affected the cement job?  
21           A.   Same answer.

Page 163:23 to 163:25

23           Q.   (BY MR. SCHWARTZ)  And you knew this at  
24   the time that the cement job on the production  
25   casing was pumped; isn't that right?

Page 164:02 to 164:05

2           A.   Same answer.  
3           Q.   (BY MR. SCHWARTZ)  And BP decided to pump  
4   the primary cement at a low rate; isn't that  
5   right?

Page 164:07 to 164:11

7           A.   Same answer.  
8           Q.   (BY MR. SCHWARTZ)  And the low rate  
9   decreased the efficiency with which the cement  
10   displaced the mud from the annular space; isn't  
11   that right?

Page 164:13 to 164:16

13          A.   Same answer.  
14          Q.   (BY MR. SCHWARTZ)  This low rate also  
15   increased the risk of channeling; isn't that  
16   right?

Page 164:18 to 164:20

18          A.   Same answer.  
19          Q.   (BY MR. SCHWARTZ)  And you knew that it  
20   would also increase the risk of contamination?

Page 164:22 to 164:24

22          A.   Same answer.  
23          Q.   (BY MR. SCHWARTZ)  And you also knew that  
24   it would increase the risk of gas flow?

Page 165:01 to 165:03

- 1           A.   Same answer.  
2           Q.   (BY MR. SCHWARTZ)   You were aware of these  
3   risks; isn't that right?

Page 165:05 to 165:07

- 5           A.   Same answer.  
6           Q.   (BY MR. SCHWARTZ)   BP was aware of these  
7   risks; isn't that right?

Page 165:09 to 165:12

- 9           A.   Same answer.  
10          Q.   (BY MR. SCHWARTZ)   Yet, BP ignored these  
11   risks when it decided to pump cement at a lower  
12   rate, didn't it?

Page 165:14 to 165:17

- 14          A.   Same answer.  
15          Q.   (BY MR. SCHWARTZ)   And you ignored these  
16   risks when you, on behalf of BP, decided to pump  
17   cement at a lower rate?

Page 165:19 to 166:04

- 19          A.   Same answer.  
20          Q.   (BY MR. SCHWARTZ)   We've discussed  
21   previously today running a cement bond log.  I  
22   want to ask you some questions about that.  
23                BP decided not to run a cement bond  
24   log after the cement job we're here for today;  
25   isn't that right?  
1           A.   Same answer.  
2           Q.   And a cement bond log would have  
3   determined if there was channeling in the cement;  
4   isn't that right?

Page 166:06 to 166:09

- 6           A.   Same answer.  
7           Q.   (BY MR. SCHWARTZ)   BP's decision not to  
8   run a cement bond log violated BP's own internal  
9   procedures, didn't it?

Page 166:11 to 166:15

11           A.   Same answer.  
12           Q.   (BY MR. SCHWARTZ)  And without this cement  
13   bond log being run, BP had no way to verify  
14   whether there was any channeling in the cement;  
15   isn't that true?

Page 166:17 to 166:20

17           A.   Same answer.  
18           Q.   (BY MR. SCHWARTZ)  However, running a CBL  
19   would -- a cement bond log would require more  
20   time; isn't that right?

Page 166:22 to 166:24

22           A.   Same answer.  
23           Q.   (BY MR. SCHWARTZ)  And running a CBL, or a  
24   cement bond log, would require money, correct?

Page 167:01 to 167:04

1           A.   Same answer.  
2           Q.   (BY MR. SCHWARTZ)  So BP saved time and  
3   money by not running the cement bond log; isn't  
4   that correct?

Page 167:06 to 167:11

6           A.   Same answer.  
7           Q.   (BY MR. SCHWARTZ)  On April 18th, 2010,  
8   you received an OptiCem report from Jesse Gagliano  
9   showing that using only seven centralizers would  
10   result in a severe gas flow potential; isn't that  
11   right?

Page 167:13 to 167:16

13           A.   Same answer.  
14           Q.   (BY MR. SCHWARTZ)  You did not contact  
15   Jesse Gagliano to discuss this information, did  
16   you?

Page 167:18 to 167:21

18 A. Same answer.

19 Q. (BY MR. SCHWARTZ) You did not seek advice  
20 from any of BP's internal experts regarding this  
21 information, did you?

Page 167:23 to 168:02

23 A. Same answer.

24 Q. (BY MR. SCHWARTZ) The only way to predict  
25 the effect of centralizer placement on mud  
1 displacement is through computer modeling; isn't  
2 that right?

Page 168:04 to 168:08

4 A. Same answer.

5 Q. (BY MR. SCHWARTZ) And the April 18th,  
6 2010, computer modeling using OptiCem software  
7 showed that using only seven centralizers would  
8 result in severe channeling; isn't that right?

Page 168:10 to 168:13

10 A. Same answer.

11 Q. (BY MR. SCHWARTZ) Nevertheless, you, on  
12 behalf of BP, proceeded with using only six  
13 centralizers; isn't that right?

Page 168:15 to 168:18

15 A. Same answer.

16 Q. (BY MR. SCHWARTZ) Nevertheless, BP  
17 proceeded with using only six centralizers; isn't  
18 that right?

Page 168:20 to 168:23

20 A. Same answer.

21 Q. (BY MR. SCHWARTZ) So, basically, you  
22 disregarded the April 18, 2010, model results;  
23 isn't that right?

Page 168:25 to 169:05

25 A. Same answer.

1 Q. (BY MR. SCHWARTZ) And you knew at the  
2 time of -- of the job that we're here for today  
3 that a previous OptiCem report from Jesse Gagliano  
4 showed that using 21 centralizers would result in  
5 only a minor gas flow potential; isn't that right?

Page 169:07 to 169:10

7 A. Same answer.  
8 Q. (BY MR. SCHWARTZ) But you decided that it  
9 was not necessary to use as many centralizers;  
10 isn't that true?

Page 169:12 to 169:15

12 A. Same answer.  
13 Q. (BY MR. SCHWARTZ) You -- and you went  
14 ahead and decided to design -- design centralizer  
15 placement yourself; isn't that correct?

Page 169:17 to 169:21

17 A. Same answer.  
18 Q. (BY MR. SCHWARTZ) And you were planning  
19 on comparing the actual cementing data with the  
20 modeling after the cement job was done; were you  
21 not?

Page 169:23 to 170:02

23 A. Same answer.  
24 Q. (BY MR. SCHWARTZ) Instead of relying on  
25 Halliburton's model, you decided that you will  
1 probably be fine and we'll probably get a good  
2 cement job?

Page 170:04 to 170:07

4 A. Same answer.  
5 Q. (BY MR. SCHWARTZ) And your placement of  
6 the centralizers was different from the placement  
7 recommended by Jesse Gagliano; isn't that true?

Page 170:09 to 170:12

9 A. Same answer.

10 Q. (BY MR. SCHWARTZ) In fact, you didn't  
11 even tell him that you were going to use only six  
12 centralizers; isn't that right?

Page 170:14 to 170:22

14 A. Same answer.  
15 Q. (BY MR. SCHWARTZ) You would agree with me  
16 that reduced pipe centralization increases the  
17 risk of poor mud displacement?  
18 A. Same answer.  
19 Q. (BY MR. SCHWARTZ) Would you agree with me  
20 that reduced pipe centralization increases the  
21 risk that mud channels will compromise zonal  
22 isolation?

Page 170:24 to 171:03

24 A. Same answer.  
25 Q. (BY MR. SCHWARTZ) You would agree with me  
1 that BP consciously assumed all the risks by  
2 choosing to use only six centralizers despite  
3 Halliburton's recommendation?

Page 171:05 to 171:11

5 A. Same answer.  
6 Q. (BY MR. SCHWARTZ) I want to ask you some  
7 questions about the slurry design. Did you  
8 ever -- isn't it true that you told Jesse Gagliano  
9 that you wanted the cement slurry recipe to  
10 include more retarder to increase the thickening  
11 time?

Page 171:13 to 171:13

13 A. Same answer.

Page 171:21 to 172:17

21 Q. (BY MR. SCHWARTZ) Mr. Morel, I'm looking  
22 at Exhibit 987, which I just handed you. It's --  
23 it's an E-mail between you and Mr. Gagliano dated  
24 April 17th, 2010; isn't that true?  
25 A. Same answer.  
1 Q. (BY MR. SCHWARTZ) And your -- the subject

2 of the E-mail in Exhibit 987 is "Lab test."; isn't  
3 that right?

4 A. Same answer.

5 Q. And you write to Jesse Gagliano: "I would  
6 prefer the extra pump time with the added risk of  
7 having issues with the nitrogen. What are your  
8 thoughts? There isn't a compressive strength  
9 development yet, so it's hard to ensure we will  
10 get what we need until it's done. Brian."

11 Did I read that correctly, Mr. Morel?

12 A. Same answer.

13 Q. (BY MR. SCHWARTZ) So, isn't it true in  
14 this E-mail, you're telling Jesse Gagliano that  
15 you would prefer to alter the cement slurry recipe  
16 to include more retarder to increase the  
17 thickening time or pump time of the cement?

Page 172:19 to 172:23

19 A. Same answer.

20 Q. (BY MR. SCHWARTZ) And isn't it true,  
21 then, in that E-mail, that you are recognizing  
22 that adding more retarder will potentially  
23 increase the risk of a nitrogen foam instability?

Page 172:25 to 173:10

25 A. Same answer.

1 Q. (BY MR. SCHWARTZ) You were aware of the  
2 difficulties with the float conversion; isn't that  
3 right?

4 A. Same answer.

5 Q. And you knew that it took nine attempts  
6 and 3,140 psi pressure to establish circulation?

7 A. Same answer.

8 Q. And even after circulation was  
9 established, you had doubts that the float collar  
10 had actually converted; isn't that true?

Page 173:12 to 173:15

12 A. Same answer.

13 Q. (BY MR. SCHWARTZ) And you weren't even  
14 sure when it was dislodged at 3140 psi when the  
15 circulation was established; isn't that right?

Page 173:17 to 173:20

17 A. Same answer.

18 Q. (BY MR. SCHWARTZ) And you were also  
19 concerned with low circulating pressure at that  
20 time; isn't that true?

Page 173:22 to 174:01

22 A. Same answer.

23 Q. (BY MR. SCHWARTZ) Despite your doubts in  
24 this regard, isn't it true that you didn't try to  
25 verify in a meaningful way that the float collar  
1 had converted?

Page 174:03 to 174:07

3 A. Same answer.

4 Q. (BY MR. SCHWARTZ) And these are  
5 unconverted float valves that could have  
6 compromised the bottom hole cement job; isn't that  
7 right?

Page 174:09 to 174:11

9 A. Same answer.

10 Q. (BY MR. SCHWARTZ) Yet, you assumed that  
11 risk, didn't you?

Page 174:13 to 174:16

13 A. Same answer.

14 Q. (BY MR. SCHWARTZ) You were also concerned  
15 that there might have been a breach somewhere in  
16 the casing during this time; isn't that true?

Page 174:18 to 174:20

18 A. Same answer.

19 Q. (BY MR. SCHWARTZ) But you didn't do  
20 anything to verify that, did you?

Page 174:22 to 175:19

22 A. Same answer.

23 Q. (BY MR. SCHWARTZ) Isn't it true,

24 Mr. Morel, that there's no such thing as the  
25 "bladder effect"?

1 A. Same answer.

2 Q. When you first drafted a Temporary  
3 Abandonment Procedure for the Macondo Well, you  
4 didn't even include a negative test procedure in  
5 that draft, did you?

6 A. Same answer.

7 Q. And then subsequently, when you did  
8 include it, you didn't describe the pass/fail  
9 criteria for the negative test; isn't that right?

10 A. Same answer.

11 Q. And you never explained in this procedure  
12 what pressures or flow volume increase you'd  
13 expect to see; isn't that right?

14 A. Same answer.

15 Q. On April 20, 2010, when you sent out  
16 operational notes describing the negative test,  
17 you once again ad -- omitted an explanation of  
18 what constitutes a successful negative test; isn't  
19 that true?

Page 175:21 to 175:25

21 A. Same answer.

22 Q. (BY MR. SCHWARTZ) And neither -- and in  
23 this draft on April 20th, you didn't include any  
24 contingency procedures in the case -- in the case  
25 that the negative test failed; isn't that true?

Page 176:02 to 176:07

2 A. Same answer.

3 Q. (BY MR. SCHWARTZ) In fact, at the time,  
4 you believed that the negative test success has to  
5 be determined in terms of flow or no flow and  
6 monitoring of the pressure is not necessary; isn't  
7 that true?

Page 176:09 to 176:12

9 A. Same answer.

10 Q. (BY MR. SCHWARTZ) And you never took any  
11 steps to emphasize the importance of a negative  
12 test to the crew; isn't that correct?

Page 176:14 to 176:17

14 A. Same answer.

15 Q. (BY MR. SCHWARTZ) And you failed to do  
16 this even though you knew that the well was going  
17 to be severely underbalanced?

Page 176:19 to 176:24

19 A. Same answer.

20 Q. (BY MR. SCHWARTZ) Isn't it true that  
21 during the drilling of this entire well, BP was  
22 drilling too fast to allow for full testing of  
23 pore pressure variations from predicted pore  
24 pressure?

Page 177:01 to 177:04

1 A. Same answer.

2 Q. (BY MR. SCHWARTZ) Isn't it true that  
3 conducting a full bottoms-up prior to a cementing  
4 job is considered to be a best industry practice?

Page 177:06 to 177:12

6 A. Same answer.

7 Q. (BY MR. SCHWARTZ) And you'd agree with me  
8 that BP made the decision not to conduct a full  
9 bottoms-up prior to the final cement job?

10 A. Same answer.

11 Q. And you would agree with me that this  
12 resulted in cement contamination?

Page 177:14 to 177:18

14 A. Same answer.

15 Q. (BY MR. SCHWARTZ) And you would agree  
16 with me that it was a contributing cause to the  
17 blowout?

18 A. Same answer.

Page 177:20 to 178:03

20 Q. (BY MR. SCHWARTZ) With regards to the  
21 spacer that was used that we've discussed today,  
22 BP chose to use lost circulation materials as a

23 spacer; isn't that right?

24 A. Same answer.

25 Q. (BY MR. SCHWARTZ) And when you did so, BP  
1 knew that there was a risk that this dense spacer  
2 could clog flow paths that could be critical to  
3 proper negative test procedure; isn't that right?

Page 178:06 to 178:09

6 A. Same answer.

7 Q. (BY MR. SCHWARTZ) And, nonetheless, you  
8 used this spacer because it saved BP time and  
9 money; isn't that right?

Page 178:11 to 178:15

11 A. Same answer.

12 Q. (BY MR. SCHWARTZ) Isn't it late that --  
13 isn't it true that as late as April 12, 2010, you  
14 did not have a Temporary Abandonment Procedure in  
15 place?

Page 178:17 to 178:21

17 A. Same answer.

18 Q. (BY MR. SCHWARTZ) Isn't it true that the  
19 rig crew and the well site leaders were still  
20 waiting on this procedure from you as late as  
21 April 12th, 2010?

Page 178:23 to 179:01

23 A. Same answer.

24 Q. (BY MR. SCHWARTZ) And isn't it true that  
25 at that time, around April 12th of 2010, planning  
1 had been lagging behind operations for some time?

Page 179:03 to 179:12

3 A. Same answer.

4 Q. (BY MR. SCHWARTZ) During displacement, BP  
5 replaced 8,367 feet of drilling mud with seawater  
6 before setting any additional mechanical barriers;  
7 isn't that right?

8 A. Same answer.

9 Q. (BY MR. SCHWARTZ) And BP conducted no

10 formal risk assessment of these changes to the TA  
11 procedure; isn't that true?  
12 A. Same answer.

Page 179:14 to 179:18

14 Q. (BY MR. SCHWARTZ) And by "TA," I mean  
15 temporary abandonment.  
16 You conducted no -- no such formal  
17 risk assessment yourself, did you?  
18 A. Same answer.

Page 179:23 to 179:25

23 You did not consider the combined  
24 effect of these changes upon the Temporary  
25 Abandonment Procedure; isn't that true?

Page 180:02 to 180:25

2 A. Same answer.  
3 Q. (BY MR. SCHWARTZ) Mr. Morel, I'm going to  
4 hand you what's been previously marked as Exhibit  
5 1517. Take a minute, if you would, to familiarize  
6 yourself with that document and if I -- if you  
7 would, please look at the second page of this  
8 document.  
9 And this is the E-mail dated  
10 April 16th, 2010, between you and Mr. Cocalles; and  
11 I'm going to read it to you. It says: "Even if  
12 the hole is perfectly straight, a straight piece  
13 of pipe even in tension will not seek the perfect  
14 center of the hole unless it has something to  
15 centralize it. But who cares? It's done. End of  
16 story. We'll probably be fine and we'll get a  
17 good cement job. I would rather have to squeeze  
18 than get stuck above the WH. So, Guide is right  
19 on the risk/reward equation. Best regards,  
20 Brett."  
21 Did I read that correctly?  
22 A. Same answer.  
23 Q. And isn't it true that you never responded  
24 to Mr. Cocalles, when he said "Who cares? It's  
25 done. End of story. We'll probably be fine"?

Page 181:02 to 181:17

2 A. Same answer.

3 Q. (BY MR. SCHWARTZ) Isn't it true that you  
4 knew that the casing could have been damaged when  
5 you pressured the float collar, as we have  
6 discussed?

7 MR. MORRISS: Form.

8 A. Same answer.

9 Q. (BY MR. SCHWARTZ) Isn't it true that  
10 Mr. Kaluza expressed his concern to you in this  
11 regard?

12 MR. MORRISS: Form.

13 A. Same answer.

14 Q. (BY MR. SCHWARTZ) Isn't it true that, at  
15 the time of this cementing of the production  
16 casing, that you thought Halliburton performed a  
17 great job?

Page 181:19 to 181:21

19 A. Same answer.

20 Q. (BY MR. SCHWARTZ) And isn't it true that  
21 you sent E-mails to this effect to the team?

Page 181:23 to 182:14

23 A. Same answer.

24 Q. (BY MR. SCHWARTZ) Isn't it true that,  
25 just before leaving the rig, you E-mailed the rest  
1 of the BP team, quote: "Just wanted to let  
2 everyone know the cement job went well. Pressure  
3 stayed low, but we had full returns the entire  
4 job, saw 80 psi lift pressure and landed out right  
5 on the circulated [sic] volume.... We should be  
6 coming out of the hole shortly"?

7 Didn't you write that?

8 A. Same answer.

9 Q. And isn't it true that later on you  
10 followed up with an E-mail saying, quote:  
11 "Halliburton's cement team" -- or saying, quote:  
12 "The Halliburton cement team did a great job"?

13 Isn't that true?

14 A. Same answer.

Page 182:22 to 183:09

22 E X A M I N A T I O N

23 BY MS. IIAMS:

24 Q. Good afternoon, Mr. Morel. My name is  
25 Sarah Iiams; and I, along with my colleague,  
1 Terrance Prout, represent Anadarko in this case.

2 First, I just want to ask you: BP  
3 was designated as the operator for the Macondo  
4 Well; is that correct?

5 A. Same answer.

6 Q. (BY MS. IIAMS) Will you agree that BP  
7 made the decisions with respect to the design,  
8 drilling, and operation of the Macondo Well?

9 A. Same answer.

Page 183:11 to 185:05

11 Q. (BY MS. IIAMS) You understand that  
12 Anadarko was a nonoperating party with respect to  
13 the Macondo Well, don't you?

14 A. Same answer.

15 Q. You're not aware of anyone from Anadarko  
16 having made any engineering decisions with respect  
17 to the design of the Macondo Well, are you?

18 A. Same answer.

19 Q. You're not aware of anyone from Anadarko  
20 having made any engineering decisions with respect  
21 to the drilling of the Macondo Well, are you?

22 A. Same answer.

23 Q. Anadarko did not have engineering input  
24 into the well operations, did it?

25 A. Same answer.

1 Q. Anadarko did not have any input regarding  
2 the cement job at Macondo, did it?

3 A. Same answer.

4 Q. You're not aware of anyone from Anadarko  
5 participating in developing or approving the  
6 cement design for the Macondo Well, are you?

7 A. Same answer.

8 Q. Anadarko did not participate in the  
9 decision to use foam cement at Macondo, did it?

10 A. Same answer.

11 Q. You don't have any evidence that Anadarko  
12 had knowledge of the base cement slurry design, do  
13 you?

14 A. Same answer.

15 Q. Anadarko did not participate in the

16 decision to use base oil as a spacer for this  
17 nitrified cement job, did it?

18 A. Same answer.

19 Q. Anadarko did participate in the decision  
20 as to which test to run on the various components  
21 of the cement job, did it?

22 A. Same answer.

23 Q. Anadarko did not receive the results of  
24 any of the tests on various components of the  
25 cement job, did it?

1 A. Same answer.

2 Q. Anadarko had no role in the decision to  
3 start the cement job without BP having a  
4 successful foam stability test in its possession,  
5 did it?

Page 185:07 to 185:11

7 A. Same answer.

8 Q. (BY MS. IIAMS) Anadarko did not  
9 participate in the decision to use a small volume  
10 of cement for the 9 and seven-eighths production  
11 casing job, did it?

Page 185:13 to 186:05

13 A. Same answer.

14 Q. (BY MS. IIAMS) You can't point to any  
15 evidence that Anadarko had any knowledge of the  
16 volume of cement that BP planned to use on the  
17 production casing job, can you?

18 A. Same answer.

19 Q. Anadarko did not participate in the  
20 decision as to what pump rate to use for the  
21 Macondo cement job, did it?

22 A. Same answer.

23 Q. Anadarko did not participate in the  
24 decision not to run a full bottoms-up; is that  
25 correct?

1 A. Same answer.

2 Q. Anadarko did not participate in the  
3 decision to ignore Halliburton's recommendation to  
4 use 21 centralizers and to use only six  
5 centralizers instead; is that correct?

Page 186:07 to 188:12

7 A. Same answer.

8 Q. (BY MS. IIAMS) Anadarko did not  
9 participate in the decision to call total depth  
10 where it was called, did it?

11 A. Same answer.

12 Q. Anadarko did not participate in the  
13 decision to use LCM spacer consisting of  
14 Form-A-Set and Form-A-Squeeze, did it?

15 A. Same answer.

16 Q. Anadarko did not participate in the  
17 determination as to whether the float collar had  
18 converted after nine attempts of conversion, did  
19 it?

20 A. Same answer.

21 Q. You have no information suggesting that  
22 Anadarko received notice that there had been  
23 difficulties in converting the float collar, do  
24 you?

25 A. Same answer.

1 Q. Anadarko did not participate in conducting  
2 or interpreting the negative test; isn't that  
3 true?

4 A. Same answer.

5 Q. Anadarko did not play any role in deciding  
6 when to install the lockdown sleeve, did it?

7 A. Same answer.

8 Q. Anadarko was provided no details of the  
9 lockdown procedure; is that true?

10 A. Same answer.

11 Q. Anadarko did not participate in the  
12 decision not to run a cement bond log, did it?

13 A. Same answer.

14 Q. Mr. Morel, during the time period prior to  
15 April 20th, 2010, you're not aware of anyone from  
16 Anadarko visiting the DEEPWATER HORIZON rig, are  
17 you?

18 A. Same answer.

19 Q. And no Anadarko personnel were stationed  
20 on the DEEPWATER HORIZON like BP had its well site  
21 leaders on the rig; is that correct?

22 A. Same answer.

23 Q. Now, you were the drilling engineer at the  
24 time of the incident on April 20th, right?

25 A. Same answer.

1 Q. And there was a reorganization of job

2 accountability and reporting at BP in 2010; is  
3 that true?

4 A. Same answer.

5 Q. The reorganization created separate  
6 reporting structures for Engineering & Operations,  
7 correct?

8 A. Same answer.

9 Q. Prior to the reorganization, you and Mark  
10 Hafle reported to David Sims; but after the  
11 reorganization, you and Mr. Hafle and Mr. Cocalles  
12 reported to Greg Walz; is that true?

Page 188:14 to 188:23

14 A. Same answer.

15 Q. (BY MS. IIAMS) David Sims, who had been  
16 on the same level as John Guide before the  
17 reorganization, was promoted to become Mr. Guide's  
18 boss; is that right?

19 A. Same answer.

20 Q. Would you agree that the BP reorganization  
21 in 2010 resulted in confusion among the Macondo  
22 team as to who was responsible for what and to  
23 whom you ultimately reported?

Page 188:25 to 189:02

25 A. Same answer.

1 Q. (BY MS. IIAMS) The reorganization led to  
2 questions of authority, didn't it?

Page 189:04 to 189:10

4 A. Same answer.

5 Q. (BY MS. IIAMS) Were you aware that, in an  
6 April, 2010, E-mail to David Sims, John Guide  
7 asked Mr. Sims what his authority was and  
8 expressed that, with the separation of Engineering  
9 & Operations, he didn't know what he could and  
10 could not do?

Page 189:12 to 189:15

12 A. Same answer.

13 Q. (BY MS. IIAMS) Is it fair to say that,  
14 shortly before the explosion, there were tensions

15       between the BP Engineering & Operation groups?

Page 189:17 to 189:21

17           A.   Same answer.

18           Q.   (BY MS. IIAMS) Did Mr. Guide ever tell  
19   you, as he did Mr. Sims, that the huge level of  
20   paranoia from Engineering leadership was driving  
21   chaos?

Page 189:23 to 190:05

23           A.   Same answer.

24           Q.   (BY MS. IIAMS) Now, Greg Walz's new  
25   position after the reorganization was Drilling  
1   Engineering Team Leader; is that right?

2           A.   Same answer.

3           Q.   Is it fair to say that there were issues  
4   with Mr. Walz's leadership and decision-making on  
5   the cement job in April, 2010?

Page 190:07 to 190:11

7           A.   Same answer.

8           Q.   (BY MS. IIAMS) You received several  
9   E-mails from Mr. Walz on April 16th and 17th where  
10   he acknowledged that he did a flip-flop concerning  
11   the use of space on the cement job, right?

Page 190:13 to 190:15

13           A.   Same answer.

14           Q.   (BY MS. IIAMS) He also indicated that he  
15   had a misstep with the centralizer, didn't he?

Page 190:17 to 190:24

17           A.   Same answer.

18           Q.   (BY MS. IIAMS) Okay. Mr. Walz also said  
19   that he needed to do a better job at leadership,  
20   didn't he?

21           A.   Same answer.

22           Q.   (BY MS. IIAMS) Do you think that "a  
23   misstep" is an accurate description of Mr. Walz's  
24   handling of the centralizer issue?

Page 191:01 to 191:12

1           A.   Same answer.  
2           Q.   (BY MS. IIAMS)  Now, BP had a Gulf of  
3 Mexico Exploration and Appraisal Communication  
4 Plan that addressed, among other things, who to  
5 call on the onshore team and when, didn't it?  
6           A.   Same answer.  
7           Q.   The notes from an April 27th interview  
8 with you indicated -- after the incident indicated  
9 "Ops note direct results of positive test should  
10 be sent to Houston" but no similar requests for  
11 the negative test.  Do you recall saying that in  
12 your interview?

Page 191:14 to 191:17

14          A.   Same answer.  
15          Q.   (BY MS. IIAMS)  Do you agree that the BP  
16 communication plan was not clear on who was to be  
17 contacted and when?

Page 191:19 to 191:22

19          A.   Same answer.  
20          Q.   (BY MS. IIAMS)  The communication plan was  
21 unclear as to whether the rig was supposed to be  
22 called during a negative test, wasn't it?

Page 191:24 to 192:03

24          A.   Same answer.  
25          Q.   (BY MS. IIAMS)  Do you agree with the  
1 opinion expressed by Mark Hafle that the BP  
2 communication plan was not particularly  
3 well-written?

Page 192:05 to 192:11

5           A.   Same answer.  
6           Q.   (BY MS. IIAMS)  Are you familiar with the  
7 BP Investigative Report that indicates that  
8 "communication between BP and Halliburton  
9 personnel involved in this cement job was not  
10 effective in relation to the challenges and  
11 associated risk with the slurry design?

Page 192:13 to 192:16

13           A.    Same answer.  
14           Q.    (BY MS. IIAMS) Now, you were directly  
15 involved in the cement job, right?  
16           A.    Same answer.

Page 192:18 to 192:20

18           Q.    (BY MS. IIAMS) Would you agree that there  
19 was ineffective communication about the cement  
20 job?

Page 192:22 to 194:04

22           A.    Same answer.  
23           Q.    (BY MS. IIAMS) Mr. Morel, BP, as the  
24 operator, established written guidelines to be  
25 followed for cementing and design operations on  
1 its rigs; isn't that true?  
2           A.    Same answer.  
3           Q.    The BP Guidelines for Cement Design and  
4 Operations in Deepwater Gulf of Mexico previously  
5 has been marked in this case as Exhibit 791. I  
6 just have some questions about those.  
7                   Will you agree with the statement in  
8 BP's Guidelines for Cement Design that obtaining a  
9 competent cement job with proper tubular placement  
10 is the most important aspect of well design and  
11 construction?  
12           A.    Same answer.  
13           Q.    Now, BP's rig guidelines are supposed to  
14 be used by the drilling engineers in the detail  
15 planning and design of cement jobs from conception  
16 to execution; is that correct?  
17           A.    Same answer.  
18           Q.    And you were the drilling engineer on the  
19 rig, right?  
20           A.    Same answer.  
21           Q.    Now, the purposes of the BP guidelines are  
22 to guide drilling personnel through the cement  
23 design process and to identify minimum  
24 requirements and standards of cement design and  
25 operations, right?  
1           A.    Same answer.  
2           Q.    And the BP guidelines state that it's

3 imperative that all requirements be met, doesn't  
4 it?

Page 194:06 to 194:19

6 A. Same answer.  
7 Q. (BY MS. IIAMS) And as the drilling  
8 engineer on the Macondo job, you will agree that  
9 it was imperative that you follow the requirements  
10 and BP's Guidelines for Cement Design and  
11 Operations, won't you?  
12 A. Same answer.  
13 Q. Now, the BP guidelines state that drilling  
14 engineers are responsible for reviewing the  
15 results of cement slurries and spacer tests as  
16 well as the details of cement operations including  
17 volumes to be pumped.  
18 You agree with that statement, don't  
19 you?

Page 194:21 to 194:25

21 A. Same answer.  
22 Q. (BY MS. IIAMS) And it's important for the  
23 BP drilling engineer to be the responsible party  
24 for the cementing standards because BP is the  
25 operator, right?

Page 195:02 to 195:05

2 A. Same answer.  
3 Q. And the operator should make sure that the  
4 requirements for a successful cement job are met,  
5 right?

Page 195:07 to 195:13

7 A. Same answer.  
8 Q. (BY MS. IIAMS) And you'll agree that  
9 achieving zonal isolation is a key requirement to  
10 a successful cement job, won't you?  
11 A. Same answer.  
12 Q. But will you agree that the BP cementing  
13 guidelines were not all followed at Macondo?

Page 195:15 to 196:01

15 A. Same answer.

16 Q. (BY MS. IIAMS) Now, BP Guidelines for  
17 Cement Design give the BP drilling engineers  
18 specific duties with respect to the job of design;  
19 isn't that right?

20 A. Same answer.

21 Q. You'll agree that the drilling engineer is  
22 responsible for providing the cement service  
23 provider with all of the necessary data and  
24 information to allow for the effective cement  
25 slurry, spacer design, and cement job plan, won't  
1 you?

Page 196:03 to 196:05

3 A. Same answer.

4 Q. (BY MS. IIAMS) BP did not always provide  
5 Halliburton with the necessary data, did it?

Page 196:07 to 196:17

7 A. Same answer.

8 Q. (BY MS. IIAMS) BP Guidelines for Cement  
9 Design also state that drilling engineers will  
10 provide the test matrix for BP Gulf of Mexico and  
11 any additional required test to be run on the  
12 cement slurries and spacers to the cement surface  
13 providers; is that true?

14 A. Same answer.

15 Q. You can't provide us with any  
16 documentation that you or any of the other  
17 engineers complied with that requirement, can you?

Page 196:19 to 196:23

19 A. Same answer.

20 Q. (BY MS. IIAMS) You and Mark Hafle were  
21 the lead BP cement program engineers who were most  
22 involved in reviewing the cement design at  
23 Macondo, right?

Page 196:25 to 197:10

25 A. Same answer.

1 Q. (BY MS. IIAMS) BP also had Erick

2 Cunningham as an adviser that you could consult  
3 with on issues relating to cement; is that true?  
4 A. Same answer.  
5 Q. And Mr. Cunningham actually approved the  
6 cement design, didn't he?  
7 A. Same answer.  
8 Q. And will you agree that Halliburton could  
9 not have poured the cement without the approval of  
10 BP as the operator?

Page 197:12 to 197:15

12 A. Same answer.  
13 Q. (BY MS. IIAMS) Will you agree that, as  
14 the operator, BP had the ultimate decision as to  
15 what cement design would be put into the well?

Page 197:17 to 197:20

17 A. Same answer.  
18 Q. (BY MS. IIAMS) And BP made the ultimate  
19 decision to go with foam cement for the production  
20 casing job; is that true?

Page 197:22 to 197:24

22 A. Same answer.  
23 Q. (BY MS. IIAMS) You actually made the  
24 decision to use foam cement, didn't you?

Page 198:01 to 198:04

1 A. Same answer.  
2 Q. (BY MS. IIAMS) Now, prior to Macondo, BP  
3 didn't have much experience with foam cement at  
4 this depth, did you?

Page 198:06 to 198:16

6 A. Same answer.  
7 Q. (BY MS. IIAMS) Greg Walz was your boss,  
8 right?  
9 A. Same answer.  
10 Q. (BY MS. IIAMS) Are you aware that he said  
11 he only knew of about two jobs of a similar depth  
12 at Macondo -- as Macondo?

13           A.    Same answer.  
14           Q.    Mr. Morel, you're aware that nitrogen foam  
15    cement, if it's unstable, can fail to provide  
16    zonal isolation, right?

Page 198:18 to 198:22

18           A.    Same answer.  
19           Q.    (BY MS. IIAMS) And you know that's what  
20    BP's investigative team concluded happened here at  
21    Macondo, right?  
22           A.    Same answer.

Page 198:25 to 199:04

25           Q.    (BY MS. IIAMS) Now, prior to the  
1    explosion, BP recognized that using foam cement  
2    could present risk due to stability issues; is  
3    that true?  
4           A.    Same answer.

Page 199:07 to 199:11

7           Q.    (BY MS. IIAMS) You were present at an  
8    April 4th meeting with Erick Cunningham, Greg  
9    Walz, and others where the potential for  
10   contamination of cement with synthetic-based mud  
11   was discussed, weren't you?

Page 199:13 to 200:02

13           A.    Same answer.  
14           Q.    (BY MS. IIAMS) You and Mr. Hafle and  
15    Mr. Cocalles also received an E-mail on April 16th  
16    from Jesse Gagliano stating that synthetic-based  
17    mud can destabilize the foam system which could  
18    cause nitrogen breakout; is that right?  
19           A.    Same answer.  
20           Q.    So, you and Mr. Hafle and Mr. Cocalles were  
21    certainly aware of the potential for nitrogen  
22    breakout prior to the incident; is that true?  
23           A.    Same answer.  
24           Q.    You also received an E-mail from Greg Walz  
25    on April 16th about the fact that cement would not  
1    set if contaminated with synthetic-based mud,  
2    didn't you?

Page 200:04 to 200:14

4           A.    Same answer.  
5           Q.    (BY MS. IIAMS) Now, you previously  
6 indicated to the BP investigators that nitrogen  
7 was the only option reviewed for this project,  
8 correct?  
9           A.    Same answer.  
10          Q.    Given the complexities involved in the  
11 cement job and the knowledge of the risk  
12 associated with foam cement, will you agree that  
13 the team should have considered other options for  
14 this project?

Page 200:16 to 200:19

16          A.    Same answer.  
17          Q.    (BY MS. IIAMS) You-all didn't conduct any  
18 type of risk assessment about the use of foam  
19 cement for the job, did you?

Page 200:21 to 201:04

21          A.    Same answer.  
22          Q.    (BY MS. IIAMS) Now, under BP Guidelines  
23 for Cement Design and Operations, drilling  
24 engineers are responsible for ensuring that  
25 adequate dry cement volumes be on the rig prior to  
1 all cement jobs, right?  
2          A.    Same answer.  
3          Q.    Will you agree that BP has ultimate  
4 approval over the dry blend to be used on the job?

Page 201:06 to 201:10

6           A.    Same answer.  
7           Q.    (BY MS. IIAMS) Now, the technical  
8 advisor -- here, Mr. Gagliano -- would have to  
9 check with BP before ordering a dry blend of  
10 cement, right?

Page 201:12 to 201:16

12          A.    Same answer.  
13          Q.    (BY MS. IIAMS) For this job, the cement

14 dry blend was already on the rig and was not  
15 specifically designed for use on the Macondo Well;  
16 is that true?

Page 201:18 to 201:21

18 A. Same answer.  
19 Q. (BY MS. IIAMS) BP made the decision to  
20 use the existing base cement instead of purchasing  
21 a new blend, didn't it?

Page 201:23 to 202:02

23 A. Same answer.  
24 Q. (BY MS. IIAMS) And BP saved money by  
25 using a dry blend cement that was already on the  
1 rig, didn't it?  
2 A. Same answer.

Page 202:04 to 202:11

4 Q. (BY MS. IIAMS) Now, you're aware that  
5 after the incident, the BP Investigative Report  
6 expressed concern that the slurry contained a  
7 defoamer but no fluid loss additive, aren't you?  
8 A. Same answer.  
9 Q. You'll agree with me that you and others  
10 at BP were fully aware of what was and what wasn't  
11 in the slurry?

Page 202:13 to 202:20

13 A. Same answer.  
14 Q. (BY MS. IIAMS) BP Guidelines for Cement  
15 Design required the drilling engineers to review  
16 the results of the slurries, right?  
17 A. Same answer.  
18 Q. So, if you didn't review them, you would  
19 have been deviating from BP guidelines, wouldn't  
20 you?

Page 202:22 to 203:03

22 A. Same answer.  
23 Q. (BY MS. IIAMS) Okay. Now, you were  
24 actually provided with the production casing

25 reports prior to the explosion that showed the  
1 constituents of the slurry that was going to be  
2 used on the well, right?  
3 A. Same answer.

Page 203:05 to 203:09

5 Q. (BY MS. IIAMS) On April 16th, for  
6 example, you and Mr. Hafle and Mr. Cocalles,  
7 Mr. Walz received the Production Casing Report,  
8 Version 6, that listed the slurry constituents,  
9 correct?

Page 203:11 to 203:15

11 A. Same answer.  
12 Q. (BY MS. IIAMS) On April 17th, you  
13 received another E-mail from Mr. Gagliano  
14 attaching the Production Casing Report, Version 5,  
15 that listed the slurry constituents, didn't you?

Page 203:17 to 203:21

17 A. Same answer.  
18 Q. (BY MS. IIAMS) On April 18th, you  
19 received another E-mail from Mr. Gagliano  
20 attaching Production Casing Report, Version 6,  
21 that also listed slurry constituents, didn't you?

Page 203:23 to 204:08

23 A. Same answer.  
24 Q. (BY MS. IIAMS) Now, the production casing  
25 reports that you received showed the cement design  
1 and listed the additives, including D-AIR 3000  
2 Defoamer, correct?  
3 A. Same answer.  
4 Q. So, you knew before the incident that the  
5 slurry contained a defoamer, right?  
6 A. Same answer.  
7 Q. There was no fluid-loss additive listed in  
8 any of the reports that you received, was there?

Page 204:10 to 204:13

10 A. Same answer.

11 Q. (BY MS. IIAMS) So, you knew that the  
12 slurry contained no fluid-loss additive before,  
13 the cement was pumped, didn't you?

Page 204:15 to 204:19

15 A. Same answer.  
16 Q. (BY MS. IIAMS) Mr. Morel, you can't point  
17 us to any instance prior to the explosion where  
18 you or anyone else at BP told Halliburton to use  
19 fluid-loss additives, can you?

Page 204:21 to 205:01

21 A. Same answer.  
22 Q. (BY MS. IIAMS) You can't point us to any  
23 occasion prior to the explosion where you or  
24 anyone else from BP expressed concern to  
25 Halliburton or anyone else about the use of a  
1 defoamer, can you?

Page 205:03 to 205:10

3 A. Same answer.  
4 Q. (BY MS. IIAMS) Now, Mr. Morel, you  
5 provided written comments about other parts of the  
6 procedure to Mr. Gagliano -- for example,  
7 directing him to increase the amount of the tartar  
8 or to add base oil -- but you did not make any  
9 comment about the use of a defoamer or a  
10 fluid-loss additive, did you?

Page 205:12 to 205:18

12 A. Same answer.  
13 Q. (BY MS. IIAMS) Now, base oil was used as  
14 a spacer on the cement job, was it not?  
15 A. Same answer.  
16 Q. (BY MS. IIAMS) And Erick Cunningham of BP  
17 was the person who suggested adding base oil into  
18 the cement job, right?

Page 205:20 to 205:23

20 A. Same answer.  
21 Q. (BY MS. IIAMS) Now, if base oil

22 commingles with cement, it can lead to  
23 destabilization and channeling, can't it?

Page 205:25 to 206:03

25 A. Same answer.  
1 Q. (BY MS. IIAMS) Prior to the explosion,  
2 Mark Hafle had expressed concern about the use of  
3 base oil at Macondo, hadn't he?

Page 206:05 to 206:07

5 A. Same answer.  
6 Q. (BY MS. IIAMS) He actually said that he  
7 didn't like base oil for this job, didn't he?

Page 206:09 to 206:17

9 A. Same answer.  
10 Q. (BY MS. IIAMS) Now, on April 16th, 2010,  
11 you sent the written direction to Halliburton to  
12 include the addition of base oil in the job  
13 procedure; is that true?  
14 A. Same answer.  
15 Q. You specifically instructed Mr. Gagliano  
16 to add a step to the procedure to pump 7 BBLs of  
17 base oil, didn't you?

Page 206:19 to 206:23

19 A. Same answer.  
20 Q. (BY MS. IIAMS) And Mr. Gagliano followed  
21 your direction because, as the operator, it was  
22 your ultimate decision as to what went in the  
23 well; isn't that true?

Page 206:25 to 207:04

25 A. Same answer.  
1 Q. (BY MS. IIAMS) So, BP was aware that base  
2 oil could commingle with foam and lead to  
3 destabilization prior to the job at Macondo,  
4 correct?

Page 207:06 to 207:08

6 A. Same answer.  
7 Q. (BY MS. IIAMS) And you-all had concerns  
8 about its use; isn't that true?

Page 207:10 to 207:13

10 A. Same answer.  
11 Q. (BY MS. IIAMS) But BP didn't conduct any  
12 formal risk assessment before using base oil on  
13 this job?

Page 207:15 to 208:01

15 Q. (BY MS. IIAMS) Is that true?  
16 A. Same answer.  
17 Q. Do you agree with the finding of the BP  
18 Investigative Report that important aspects of the  
19 foam cement design, such as foam stability,  
20 possible contamination effects, and fluid loss  
21 potential, did not appear to have been critically  
22 assessed in the prejob reviews?  
23 A. Same answer.  
24 Q. Will you agree that, as the drilling  
25 engineer, it was your responsibility to conduct  
1 these critical assessments in the prejob reviews?

Page 208:03 to 208:25

3 A. Same answer.  
4 Q. (BY MS. IIAMS) You'll agree that BP was  
5 supposed to engage in quality assurance and  
6 quality control of the cementing jobs at the well  
7 site, won't you?  
8 A. Same answer.  
9 Q. In fact, BP's written Guidelines for  
10 Cement Design and Operation provided a detailed  
11 checklist that was to be completed to ensure the  
12 performance of the cement job was as close as  
13 possible to the way the job is optimized; isn't  
14 that true?  
15 MR. MORRISS: Form.  
16 A. Same answer.  
17 Q. (BY MS. IIAMS) Under the checklist, you  
18 were supposed to have a lab report showing cement  
19 slurry formulations and testing results, right?  
20 MR. MORRISS: Form.

21           A.   Same answer.  
22           Q.   (BY MS. IIAMS)  You never completed the  
23 checklist required by BP's Guidelines for Cement  
24 Design, did you?  
25           A.   Same answer.

Page 209:02 to 209:05

2           Q.   (BY MS. IIAMS)  You're not aware of anyone  
3 else completing the Checklist For Quality  
4 Assurance/Quality Control for this cementing job  
5 at the well site, are you?

Page 209:07 to 209:10

7           A.   Same answer.  
8           Q.   (BY MS. IIAMS)  If the checklist was not  
9 completed, will you agree that was contrary to the  
10 BP Guidelines for Cement Design?

Page 209:12 to 209:22

12          A.   Same answer.  
13          Q.   (BY MS. IIAMS)  You're aware that the BP  
14 Investigative Report stated that the BP Macondo  
15 Well Team did not provide effective quality  
16 assurance on Halliburton's technical services,  
17 aren't you?  
18          A.   Same answer.  
19          Q.   And it's a fair statement that you and the  
20 other members of the well -- Macondo Well Team did  
21 not provide effective quality assurance of the  
22 cement job, isn't it?

Page 209:25 to 210:15

25          A.   Same answer.  
1          Q.   (BY MS. IIAMS)  You were asked some  
2 questions earlier about computer modeling and  
3 centralizers, and I just wanted to ask you:  
4 You'll agree that BP's written Guidelines for  
5 Cement Design and Operations in the deepwater Gulf  
6 of Mexico state that:  "Computer modeling should  
7 be used to optimize the selection and placement of  
8 centralizers," don't you?  
9          A.   Same answer.

10 Q. And you had seen OptiCem simulator models  
11 before this job and on other wells, right?

12 A. Same answer.

13 Q. You never expressed concern that the  
14 reports were too long or that you were unable to  
15 read or understand them, did you?

Page 210:17 to 210:20

17 A. Same answer.

18 Q. (BY MS. IIAMS) And BP's own guidelines  
19 required that you work with the cement company to  
20 run the centralizer placement models, right?

Page 210:22 to 211:01

22 A. Same answer.

23 Q. (BY MS. IIAMS) So you'll agree with me  
24 that it was important for you, as the drilling  
25 engineer, to actually read the results of the  
1 centralizer placement simulations, won't you?

Page 211:03 to 211:03

3 A. Same answer.

Page 211:17 to 214:01

17 Mr. Morel, you're not familiar with  
18 the BOP equipment that was used on the DEEPWATER  
19 HORIZON in April of 2010, are you?

20 A. Same answer.

21 Q. Okay. You are not aware of any complaints  
22 or criticisms concerning the BOP that was in use  
23 on the DEEPWATER HORIZON in April of 2010, are  
24 you, sir?

25 A. Same answer.

1 Q. You personally don't have any complaints  
2 or criticisms about the BOP in use on the  
3 DEEPWATER HORIZON in April of 2010?

4 A. Same answer.

5 Q. You don't have any personal knowledge  
6 regarding the design or manufacture of the blowout  
7 preventer on board the DEEPWATER HORIZON, do you,  
8 sir?

9 A. Same answer.

10 Q. Do you have any personal experience  
11 working with BOPs?  
12 A. Same answer.  
13 Q. Do you have any knowledge regarding the  
14 maintenance of the blowout preventer on board the  
15 DEEPWATER HORIZON?  
16 A. Same answer.  
17 Q. And, in fact, you have no knowledge  
18 regarding the maintenance of the DEEPWATER HORIZON  
19 blowout preventer; do you, sir?  
20 A. Same answer.  
21 Q. You have never designed, operated, or  
22 tested a blowout preventer, have you, sir?  
23 A. Same answer.  
24 Q. And you're not here today in any sort of  
25 expert capacity on blowout preventers, are you,  
1 sir?  
2 A. Same answer.  
3 Q. And you have no personal knowledge  
4 regarding the performance of the blowout preventer  
5 on the DEEPWATER HORIZON the night of April 20th;  
6 do you, sir?  
7 A. Same answer.  
8 Q. And you have no personal knowledge as to  
9 what the crew did or did not do with respect to  
10 the operation of the blowout preventer on the  
11 night of April the 20th; do you, sir?  
12 A. Same answer.  
13 Q. If I were to continue to ask you questions  
14 about well control activities on board the  
15 DEEPWATER HORIZON the night of April the 20th,  
16 would you continue to invoke your right not to  
17 answer those questions pursuant to the Fifth  
18 Amendment and refuse to answer the questions?  
19 A. Yes.  
20 Q. Okay. And if I were to continue to ask  
21 you questions about the blowout preventer on the  
22 DEEPWATER HORIZON, would you continue to invoke  
23 your right not to answer those questions pursuant  
24 to the Fifth Amendment and refuse to answer the  
25 questions?  
1 A. Yes.

11 Q. Good afternoon, Mr. Morel. My name is  
12 Michael Lemoine. I represent Weatherford.

13 I'm going to ask you some questions  
14 that primarily involve issues that are related to  
15 my client, Weatherford.

16 You -- you were involved in the  
17 selection of the Weatherford M 45 AP autofill  
18 float collar that was used on the Macondo Well  
19 long string, were you not?

20 A. Same answer.

21 Q. You have a general understanding of what  
22 an M 45 AP Weatherford autofill float collar is  
23 designed for use in such a well?

24 A. Same answer.

25 Q. Would you agree with me, Mr. Morel, that  
1 the purposes of the M 45 AP float collar used in  
2 the long string of the Macondo Well -- and I will  
3 itemize them for you -- was for surge reduction.  
4 Do you agree with that?

5 A. Same answer.

6 Q. No. 2, providing a landing profile for the  
7 wiper plugs. Do you agree with that?

8 A. Same answer.

9 Q. And third, for preventing the back flow of  
10 cement after the cement pumping stops until the  
11 cement hardens? Do you agree with that?

12 A. Same answer.

13 Q. Did -- to your knowledge, did BP intend  
14 the Weatherford M 45 AP float collar used on the  
15 Macondo Well long string to serve any other  
16 purpose than those three purposes that I just  
17 itemized?

18 A. Same answer.

19 Q. Are you aware of any Weatherford product  
20 literature or product documents that represent  
21 that Weatherford's M 45 AP autofill float collar  
22 used by BP on the Macondo Well long string was  
23 designed or intended for any other purpose than  
24 the three purposes that I just itemized?

25 A. Same answer.

1 Q. Are you aware of any Weatherford  
2 information, written technical information, that  
3 states that Weatherford's M 45 AP autofill float  
4 collar is intended to be used as a mechanical  
5 barrier to hydrocarbon flow?

6 A. Same answer.

7 Q. Is it a fact that Weatherford never  
8 communicated to you verbally or represented to you  
9 in any way that the M 45 AP autofill float collar  
10 used on the Macondo Well long string was intended  
11 to be a mechanical barrier to hydrocarbon flow?

12 A. Same answer.

13 Q. Are you saying that Weatherford never  
14 represented to you that the float collar in  
15 question -- I'm not going to go through that long  
16 sentence again -- the float collar on the Macondo  
17 Well long string -- could be used as a mechanical  
18 barrier to hydrocarbon flow?

19 A. Same answer.

20 Q. Are you aware of any document from BP,  
21 either an ETP, DWOP, group practice or any  
22 guidance -- other guidance document, that states  
23 that a Weatherford autofill float collar such as  
24 the M 45 AP can be used on a well such as Macondo  
25 as a barrier to hydrocarbon flow?

1 A. Same answer.

2 Q. Are you aware of any BP document, whether  
3 an ETP, DWOP, group practice or any guidance  
4 document, that allows BP engineers to use oil  
5 field tools or products in deepwater wells such as  
6 the Macondo Well for purposes other than those for  
7 which the manufacturer of the tool has designed  
8 them?

9 A. Same answer.

10 Q. Are you aware of any industry standard,  
11 practice, or recommendation -- recommendation,  
12 including API, that states or implies that an  
13 autofill float collar such as the M 45 AP can be  
14 used as a barrier to hydrocarbon flow?

15 A. Same answer.

16 Q. I would like to ask you some questions  
17 about what you understand, as an engineer for BP,  
18 constitutes a "barrier to flow."

19 Would you agree that a barrier to  
20 flow -- a device used in a deepwater well for a  
21 barrier to flow should have the capacity and  
22 capability of withstanding the pore pressure --  
23 the anticipated pore pressure of the reservoir?

24 A. Same answer.

25 Q. Do you agree with me that the -- the  
1 predicted pore pressure of the Macondo Well  
2 reservoir near total depth was somewhere between

3 12- and 14,000 psi?

4 A. Same answer.

5 MR. MORRISS: Form.

6 Q. (BY MR. LEMOINE) Would you agree with me  
7 that you knew that the back pressure rating of the  
8 Weatherford float collar used on the Macondo Well  
9 long string was rated at only 5,000 psi?

10 A. Same answer.

11 Q. If -- if that information is correct,  
12 would you agree that, on that basis alone, the  
13 back pressure rating of a float collar at 5,000  
14 psi placed in a long string with reservoir  
15 pressure between 12- and 14,000 psi would, in and  
16 of itself, render that float collar unable to  
17 serve the purpose of a barrier to hydrocarbon  
18 flow?

Page 218:20 to 218:24

20 A. Same answer.

21 Q. (BY MR. LEMOINE) And that it would be  
22 imprudent to place that device in the Macondo Well  
23 if the intent was that it was to serve as a  
24 barrier to hydrocarbon flow?

Page 219:01 to 219:06

1 A. Same answer.

2 Q. (BY MR. LEMOINE) Would you agree with me  
3 that, in describing generally the -- the  
4 characteristics of a barrier to flow, that one  
5 such as BP should consider whether that barrier  
6 provides a gas- or oil-tight seal?

Page 219:08 to 220:18

8 A. Same answer.

9 Q. (BY MR. LEMOINE) Would you agree with me  
10 that the reservoir of the Macondo Well near total  
11 depth was an oil and gas formation?

12 A. Same answer.

13 Q. Did Weatherford ever represent to you in  
14 any fashion, whether in writing or verbally, that  
15 the Weatherford M 45 AP autofill float collar  
16 provided a gas- or oil-tight seal upon conversion?

17 A. Same answer.

18 Q. Would you agree with me that what  
19 Weatherford did represent to you, including  
20 through its product literature, was that this  
21 float collar met the performance criteria of API  
22 RP 10F?

23 A. Same answer.

24 Q. Do you agree with me, Mr. Morel, that API  
25 RP 10F does not require a float collar to be a  
1 gas- or oil-tight seal?

2 A. Same answer.

3 Q. Are you familiar with BP Group Practice  
4 10-60 pertaining to zone isolation requirements?

5 A. Same answer.

6 Q. Would you please flip to Tab 37 on the  
7 disk and in your binder, Tab 37.

8 Would you agree with me that what I  
9 have shown you is, in fact, BP Group Practice  
10 10-60 pertaining to zone isolation requirements?

11 A. Same answer.

12 Q. Would you agree with me that this  
13 document, Tab 37, which I believe has already been  
14 identified as Exhibit 1802, that this particular  
15 document was the governing document for the  
16 Macondo Well long string with respect to the  
17 temporary abandonment procedures?

18 A. Same answer.

Page 220:20 to 220:25

20 Q. (BY MR. LEMOINE) Would you agree with me  
21 that Tab 37, the BP Group Practice 10-60 was the  
22 applicable BP guidance document in effect on  
23 April 20, 2010, that set forth the requirements  
24 for the placement of hydrocarbon barriers during  
25 the temporary abandonment of the Macondo Well?

Page 221:02 to 222:02

2 A. Same answer.

3 Q. (BY MR. LEMOINE) Would you please turn to  
4 Section 6 -- no -- of -- of that 10-60 document.

5 Would you agree with me that it  
6 reads -- that it is entitled "Suspension and  
7 Temporary Abandonment" and reads that:

8 "Suspension and temporary abandonment shall be  
9 designed to ensure zonal isolation for the

10 duration of the suspension and permit safe reentry  
11 of the well."

12 Did I read that correctly?

13 A. Same answer.

14 Q. Would you please look at 6.1.1 regarding  
15 number of barriers. Would you agree that I'm  
16 reading this correctly: "Two temporary barriers  
17 shall be installed for isolation of movable  
18 hydrocarbon-bearing or overpressurized permeable  
19 sections from surface seabed."

20 Did I read that correct?

21 A. Same answer.

22 Q. Do you agree with me that the intention of  
23 BP with respect to the Macondo Well between  
24 April 15th and April 20th was to install two  
25 temporary barriers to be used with respect to the  
1 temporary abandonment operations?

2 A. Same answer.

Page 222:04 to 222:17

4 Q. (BY MR. LEMOINE) Would you agree with me  
5 that nowhere in GP 10-60 does it provide that a  
6 float collar can be one of the barriers placed for  
7 temporary abandonment of a well?

8 A. Same answer.

9 Q. Would you please look at 6.2 -- Section  
10 6.2, "Acceptable Barriers."

11 Would you agree with me, Mr. Morel,  
12 that this guidance document and particularly this  
13 section gives the information a BP engineer needs  
14 to know in selecting the type of barrier to comply  
15 with the guidance document requirement for the  
16 placement of barriers to hydrocarbon flow during  
17 temporary well abandonment?

Page 222:19 to 223:10

19 A. Same answer.

20 Q. (BY MR. LEMOINE) Would you agree with me  
21 that, in part, 6.2 reads that, as an alternative  
22 to cement, mechanical barriers may be considered  
23 for suspension. "In this event, the impact or  
24 anticipated length of the suspension/subsurface  
25 environment and type or well on the durability of  
1 the selected" -- "selected barrier should be

2 made."

3 Did I read that correctly?

4 A. Same answer.

5 Q. Would you agree with me that this guidance  
6 document requires a BP engineer, in determining  
7 what mechanical barriers to place on a well for  
8 temporary well abandonment, should consider the  
9 anticipated length of the suspension?

10 A. Same answer.

Page 223:12 to 223:17

12 Q. (BY MR. LEMOINE) And would you agree with  
13 me that, from your personal knowledge, the  
14 anticipated length of the suspension from the time  
15 that the Macondo Well would be temporarily  
16 abandoned until reentered was months?

17 A. Same answer.

Page 223:19 to 224:15

19 Q. (BY MR. LEMOINE) Would you agree that one  
20 of the requirements under 6.2 is for the BP  
21 engineer to evaluate the subsurface environment in  
22 deciding which barrier would be acceptable to  
23 place in the well for temporary well abandonment?

24 A. Same answer.

25 Q. Would you agree with me that the  
1 subsurface environment of the Macondo Well on the  
2 long string, particularly in the area of the shoe  
3 track, would be such that it would be adjacent to  
4 a reservoir with pore pressure exceeding 12,000  
5 psi?

6 A. Same answer.

7 Q. Would you agree with me that, given the  
8 Weatherford M 45 AP -- given that the Weatherford  
9 M 45 AP float collar was not designed to provide a  
10 gas- or oil-tight seal and was only rated for back  
11 pressure of 5,000 psi, that it would be imprudent  
12 for anyone to place that float collar in the  
13 Macondo Well long string if the intent was for it  
14 to serve as one of the hydrocarbon barriers  
15 discussed in that guidance document?

Page 224:17 to 225:07

17 A. Same answer.

18 Q. (BY MR. LEMOINE) Would you please look at  
19 Section 6.3, Veri -- "Verification of Barriers."  
20 Would you agree that I'm reading this correctly?  
21 It states that: "The first barrier shall be  
22 pressure and/or inflow tested and tagged (if plug  
23 is set in open hole, tagging only required). The  
24 second barrier shall be tagged or pressure  
25 tested."

1 Did I read that correctly?

2 A. Same answer.

3 Q. Would you agree with me that Section 6.3  
4 of this guidance document gives the information to  
5 a BP engineer on how to test the barriers to  
6 verify that they could serve that purpose in a  
7 temporary well abandonment procedure?

Page 225:09 to 225:19

9 A. Same answer.

10 Q. (BY MR. LEMOINE) Are you aware of the --  
11 have you ever read the BP Bly report,  
12 investigative report?

13 A. Same answer.

14 Q. Are you aware that the BP investigative  
15 team determined that the differential pressure  
16 between the shoe track cement and the annulus  
17 cement was so little that the float test performed  
18 on the float collar on April 20th was unreliable?

19 A. Same answer.

Page 225:21 to 226:03

21 Q. (BY MR. LEMOINE) If, in fact, the  
22 differential pressure was insufficient to provide  
23 a reliable float collar test to determine if it  
24 was holding, would you agree with me that, if  
25 someone made a mistake and used this -- intended  
1 for this float collar to be a mechanical barrier  
2 to flow, then under 6.3, it could not have been  
3 verified as to that function?

Page 226:05 to 226:05

5 A. Same answer.

Page 226:17 to 227:12

17 Q. (BY MR. LEMOINE) Okay. Would you please  
18 look at Tab 23. Tab 23 was previously marked as  
19 Exhibit 1803.

20 Would you agree with me that this  
21 document -- you had personal involvement in the  
22 preparation of this document?

23 A. Same answer.

24 Q. Would you agree with me that this  
25 document, Tab 23, is the -- I'm sorry, contains  
1 the -- the procedures involved in preparing the  
2 Macondo Well for temporary abandonment?

3 A. Same answer.

4 Q. Would you please -- could you confirm for  
5 us, sir, that according to that document as well  
6 as your personal knowledge, having been involved  
7 in the BP well engineering team, that the two  
8 barriers intended for the Macondo Well in  
9 compliance with Guidance Document 10-60 were the  
10 cement in the annulus and shoe track; and No. 2,  
11 the cement plug?

12 A. Same answer.

Page 227:21 to 229:20

21 Would you agree that Section 9.2.3  
22 provides the procedure for cementing the annulus  
23 and shoe track of the long string on the Macondo  
24 Well?

25 A. Same answer.

1 Q. Would you look at Section 9.2.4. Would  
2 you agree with me that that section provides the  
3 procedures for installing the cement plug at  
4 approximately 8,367 feet within the long string  
5 calculated from the mud line?

6 A. Same answer.

7 Q. And would you agree with me that this  
8 document supports the conclusion that the annulus  
9 and shoe track cement and the cement plug were  
10 intended to constitute the required barriers under  
11 Guidance Document 10-60 for the Macondo Well --

12 A. Same answer.

13 Q. -- and not the Weatherford float collar?

14 A. Same answer.

15 Q. Would you agree with me that there's

16 nothing in that document that we're looking at  
17 that states that the Weatherford float collar was  
18 intended to be placed on the long string of the  
19 Macondo Well to serve as a barrier to hydrocarbon  
20 flow?

21 A. Same answer.

22 Q. I want to turn -- I'm finished with the  
23 binders now, and this is going to be the last  
24 group of questions I have and it will go very  
25 fast. I want to ask you some brief questions  
1 about the events of April 19th.

2 It's a fact that you were on the rig  
3 during the cementing of the long string between  
4 the afternoon of April 19th and the early morning  
5 hours of April 20th; is that correct?

6 A. Same answer.

7 Q. And is it a fact, sir, that during -- that  
8 subsequent to the running of the long string to  
9 total depth, an attempt was made to establish  
10 circulation to the long string?

11 A. Same answer.

12 Q. And it's a fact, is it not, Mr. Morel,  
13 that when circulation was attempted through the  
14 long string after it was run to total depth, that  
15 circulation was unable to be established?

16 A. Same answer.

17 Q. And is it a fact that BP suspected that  
18 circulation could not be established because of  
19 blockage somewhere in the shoe track from debris  
20 during the autofill process?

Page 229:22 to 230:02

22 A. Same answer.

23 Q. (BY MR. LEMOINE) Would you agree that  
24 debris causing a blockage of the shoe track on  
25 pipe run in an autofill manner is something that  
1 was known and foreseeable by BP?

2 A. Same answer.

Page 230:04 to 230:15

4 Q. (BY MR. LEMOINE) Would you agree that you  
5 have no information or evidence to indicate that  
6 the inability to establish circulation through the  
7 long string on the afternoon of April 19th was

8 not -- was in no way related to any malfunction of  
9 the Weatherford float collar installed on the long  
10 string?

11 A. Same answer.

12 Q. Is it a fact that what BP wanted to do  
13 that afternoon was to establish circulation by  
14 increasing pump pressure to blow whatever debris  
15 was causing the blockage out of the way?

Page 230:17 to 230:21

17 A. Same answer.

18 Q. (BY MR. LEMOINE) Would you agree that if  
19 BP was unable to clear the blockage by increasing  
20 pump pressure, that it would have resulted in the  
21 pulling of the long string?

Page 230:23 to 231:04

23 A. Same answer.

24 Q. (BY MR. LEMOINE) Is it a fact, Mr. Morel,  
25 that prior to increasing the pump pressure to  
1 clear the blockage, BP determined the burst  
2 pressure of the iron along the long string that  
3 would feel or that would be subject to these  
4 pressure increases?

Page 231:06 to 231:10

6 A. Same answer.

7 Q. (BY MR. LEMOINE) And that some of the  
8 equipment that BP was concerned about before  
9 authorizing the increase in pressure was the burst  
10 pressure of the cement head? Yes?

Page 231:12 to 231:14

12 A. Same answer.

13 Q. (BY MR. LEMOINE) The diverter -- diverter  
14 tool?

Page 231:16 to 231:18

16 A. Same answer.

17 Q. (BY MR. LEMOINE) The long string casing  
18 itself?

Page 231:20 to 231:21

20 A. Same answer.

21 Q. (BY MR. LEMOINE) And the float collar?

Page 231:23 to 233:20

23 A. Same answer.

24 Q. (BY MR. LEMOINE) And isn't it a fact that  
25 in determining the burst pressure of the float  
1 collar, you made a phone call to Brian Clawson in  
2 the afternoon of April 19th, 2010?

3 A. Same answer.

4 Q. And isn't it a fact that Brian Clawson  
5 told you that the burst pressure, the pressure  
6 above which the float collar would be severely  
7 damaged, was 6800 psi?

8 A. Same answer.

9 Q. And isn't it a fact that BP never exceeded  
10 6800 psi?

11 A. Same answer.

12 Q. And never exceeded the burst pressure of  
13 any of the iron that I mentioned? I'll do it  
14 again: Cement head, diverter tool and the casing  
15 itself?

16 A. Same answer.

17 Q. And isn't it a fact that you have  
18 absolutely no information or evidence that the  
19 pressuring up in order to establish circulation  
20 through the float collar on the afternoon of  
21 April 19th caused any damage to the float collar?

22 A. Same answer.

23 Q. And you have no information or evidence to  
24 share with us that would indicate that the float  
25 collar did not convert?

1 A. Same answer.

2 Q. You have no evidence to indicate that the  
3 Weatherford float collar, the M 45 AP float  
4 collar, on the Macondo Well did not serve its  
5 intended function of providing a receptacle for  
6 the landing plugs, "yes" or "no"?

7 A. Same answer.

8 Q. Preventing the ingress of cement after the  
9 cement pumping was performed?

10 A. Same answer.

11 Q. And fulfilling its intended function of  
12 surge reduction when running the long string into  
13 the Macondo Well?

14 A. Same answer.

15 Q. You have no evidence or any -- any  
16 information or indication that the Weatherford  
17 float collar did not perform any of its intended  
18 functions that BP expected in the Macondo Well  
19 long string?

20 A. Same answer.

Page 234:03 to 234:05

3 BY MR. BICKFORD:

4 Q. Mr. Morel, Scott Bickford again. I just  
5 have a few follow-up questions.

Page 235:03 to 236:02

3 MR. BICKFORD: I'm going to mark what  
4 purports to be an E-mail from a Kate Paine to a  
5 John Brannen, B-R-A-N-N-E-N. "Subject: Lessons  
6 learned; plan forward Macondo." Date is  
7 March 19th, 2010.

8 (Marked Exhibit No. 4516.)

9 Q. (BY MR. BICKFORD) Sir, do you know who  
10 Kate Paine is?

11 A. Same answer.

12 Q. Okay. Do you know who John Brannen is?

13 A. Same answer.

14 Q. Okay. Were you aware that Kate Paine had  
15 commented on -- to John Brannen regarding the  
16 lessons learned surrounding the events of early  
17 March at the Macondo Well?

18 A. Same answer.

19 Q. Were you aware that she stated: "I'm  
20 sorry to push back on lessons learned. I know  
21 you've got to get something out there to make it  
22 look like we won't do this again. But without  
23 obvious indicators and without a real push to make  
24 hole and skip the contingency liner, I don't see  
25 us really learning. The best bet is to hedge the  
1 'most likely' and to have some centroid built into  
2 the plan initially. Kate."

Page 236:04 to 237:06

4 Q. (BY MR. BICKFORD) Were you ever apprised  
5 of her opinion, sir?

6 A. Same answer.

7 Q. Sir, I'd ask you to turn to Tab No. 74 --  
8 no, sorry, it's not Tab 74. It's Tab -- it is  
9 Tab 64.

10 Sir, this -- I'm going to label this  
11 as Exhibit No. 4517.

12 (Marked Exhibit No. 4517.)

13 Q. (BY MR. BICKFORD) This purports to be an  
14 E-mail dated April 20th from you to John Guide,  
15 Mark Hafle, Brett Cocalles, and Gregory Walz. Do  
16 you recognize the document, sir?

17 A. Same answer.

18 Q. Did you write the document, sir?

19 A. Same answer.

20 Q. Sir, the document states, quote: "Just  
21 wanted to let everyone know that the cement job  
22 went well. Pressure stayed low. We had full  
23 returns the entire job. Saw 80 psi lift pressure  
24 and landed outright on the calculated volume.  
25 Seal assembly is set and tested. We should be  
1 coming out of the hole shortly, Brian."

2 Did I read that correctly?

3 A. Same answer.

4 Q. And, sir, was that your opinion, having  
5 observed the cement job?

6 A. Same answer.
