It's been my understanding that any info from Mike is good and should be used. That's how things got kicked off in the meeting last week. If that's not the case, then someone should manage that line of communication.

Mike has been feeding me updated info since last week. Some of the original info he supplied was either not totally complete or was just preliminary. When he sends me updated info, I distribute it to the folks who need to know.

Best regards,
TJ Avery

Please note the email received from Les below.

I have assured Les that in future, all changes will only be made with his written approval.

Kim, Dr. Jan: I know that you are doing work that is being directed by Julian and I have agreed to that work. I think however, that we should let Les know what you are doing so that we avoid a similar situation with the analytical work. I will let Les know what we are doing (in general terms) and I will ask him to either approve the work or agree that Julian can give instructions for additional work. I will copy you on the email.

Regards,
Alvin.

Alvin -

I am curious why TJ accepted authorization from Mike Cargol, Wild Well Control today to change the design of the manifold support system due to a change in the subsea choke. I would appreciate in the future that any changes or requests for changes come through me. Thanks.
