**Subject:** Update on BP Macondo well from DD3 (Relief Well #1)

There is a lot going on at present. The underlying situation is that they really don't know what they should do.

I'll send along a better update later this afternoon.

**Subject:** Update from DD3

We're getting all kinds of mixed up messages. Latest from town this morning was that they are leaning toward not drilling into the annulus, setting a plug in the 9-7/8" and going forward with the open water portion of the PxA. Relief well would stand by until perforation of the Macondo 9-7/8" and circulation (presumably cementing of the annulus).

My sense is that they would not want to keep specialist personnel on the rig during the PxA operation but all that is very unclear at this time. Also don't know what they want to do with the stimulation and/or mud supply vessels during that period.

dB
