BP PROPRIETARY INFORMATION

EXECUTIVE SUMMARY

Chesapeake Energy Corporation (Chesapeake) is one of the largest independent natural gas producers in the United States. Chesapeake is a leader in the development of unconventional resources, such as shale and tight sands. The company has a significant presence in the Marcellus Shale region, which is one of the most productive shale gas basins in the country.

The primary focus of this document is the Marcellus Well, which is located in West Virginia. The well was drilled by Chesapeake and is operated by BP (British Petroleum). The well is part of a larger field called the Marcellus North Field, which is one of the most productive areas in the Marcellus Basin.

The document provides a summary of the operations and results of the Marcellus Well during its initial production period. It highlights the important aspects of the well's performance, including its initial gas production rates, pressure response, and the challenges faced during the well's operation. The summary also discusses the impact of these operations on the surrounding environment and the steps taken to mitigate any potential negative effects.

The document is intended for internal use only and is protected by proprietary information rights.
