Rob

Some general comments from me

Lain needs a plan, so I am trying this for a start

1. Identify equipment and time required to fit 2 x Valves plus Subsea Choke on the DD II BOP, these to be ROV Controllable and not hooked into the BOP Control System.

FSV double block available
- 2 days
Pipe work from FSV to Choke & Pipe w/hub on discharge side needs to be produced
- 4 days to source and build pipe work needed c/with hubs
Choke needs to be sourced through Cameron
- 4 days to source and make ready (overhaul)
ROV Control System to be designed and build
7 days to design, build and test
Assemble all components, pressure test, ship
2 days
Ship and install on the rig – 3 days
TOTAL OF ~ 12 DAYS
