Roger...thanks.

FYI...SCAT is going out to West Dauphin this week to evaluate the situation there and give some recommendations on what method to clean to non-amenity standards. Dan Norton thinks he will have the NEBA done by this Friday anyway so we will know better as to which method we will be cleaning to so that Ops can order the crews, equipment, etc. There may be some areas in which SCAT says manual crews only. If that is the case, there will be some opportunity to get on there before some of the equipment arrives.

The turtle dog will go out to the island possibly by Friday, more likely Saturday (we will know more Friday AM once the accuracy testing is complete). He should be done before OPS gets on.

Keep Ken Saunders in the loop. FYI on Saunders, he apparently has had a good relationship with Roy Collins (?) from ADEM. I'm assuming Roy is feeding Steve Jenkins. I haven't heard from Steve at all...he fell off the face of the earth for whatever reason. According to Saunders, Jenkins is relying on his branch person. Steve's marching orders from the Governor is to do whatever keeps the Mayors happy. I guess that is why he is doing what he does...unfortunately, he is not bringing their issues up here. So when they yell, he just goes with their flow. So hopefully the liaison can get ahead of that game play and put an end to some of the mass craziness.

Thanks!
JH

Capt,
this just out wanted you to have visibility on this late entry.

Jeremiah,

I concur. Before pulling the trigger on this we need ensure New Orleans GCIMT & Alabama C&ER are aligned with us. Also, ADEM has to be kept in the loop.

Thx,

Bob

Subject: Segment Frequency change

Bob,

I would like to change the operational frequency on all active operational segments in Dauphin Island (SEG.160-167 & 62-70) and Little Dauphin Island (197-203) to every 14 days (excluding segments that are on environmental hold LDI 195, 196 and 153). At the end of the first 14 days SCAT will conduct a survey and record their findings. Depending on the findings of the SCAT data, collection data, and NRC reports we can then request for the segments to be placed into SCAT monitoring. The collection amounts are well below the background levels and The team believes these segments will pass a PIST inspection by SCAT.

This frequency change is in alignment with the ICS 202 General Response Objectives (A,B,C,D,H,I). Ayana, ADEM, AL USCG will need to be copied on this e-mail to insure that objectives (E, F) are met.
