Note: This chart contains Login and Logout activity for persons who had system rights to access Deepwater Horizon/MC 252 Macondo well data within Insite Anywhere. These same persons may also have had system rights to access data on other wells not the subject of this matter. Therefore, the Login and Logout times contained within this chart, while believed to be associated with the Deepwater Horizon/MC 252 Macondo well data, may also represent a portion of time when the user was accessing data for other wells during the same Logon session. The times represented herein specifically relate to Login and Logout the Insite Anywhere system as a whole. In addition, while Logon times are believed to be accurate, there is a potential that Logout times may not be accurate if, for example, persons exited Insite Anywhere by clicking the "X" in the upper right-hand corner of the screen instead of clicking on the logout functionality provided for within the Insite Anywhere application. Other examples would be if the system locked up and had to be rebooted or if there was a power outage or spike affecting the user session. If greater detail is required on any individual entries contained herein, Halliburton can attempt to obtain more specific information.
