Subject: Macondo Objective Depth Definition

Gents,

Please let me know if the following definition of "Objective Depth" at Macondo is ok:

**"Objective Depth" shall be the first of the following to occur:**

- a. 19,650 TVD;
- b. A depth sufficient to test the benthic foraminifera Robulus L. interval as seen in BP's MC 562 OCS-G 19966 #1 well; or
- c. A onset of pressure beyond 18,650' TVD that requires a new casing string to continue drilling.

Mark, discussed with Bryan late yesterday and he wanted to be sure you were comfortable. Please advise with any changes/corrections.

Thanks,

**Michael J. Beirne**
